Countering Heedless Jihad James A. Sheppard,2017-10-19 Using concepts that are not already a part of the militant discourse as a way to undermine extremism, Countering Heedless Jihad explores a stratagem aimed at defusing jihadist ideology. It explains how to counteract idealist theology using concepts from it, borrowing ideas from some revered Islamic theologians and positioning them in a way that sabotages jihadist ideology. By integrating the theology with viable methods for dissemination, it presents a viable means for confusing existing members of radical groups and for neutralizing their recruiting effort. The book includes contributions by Major General Michael Lehnert, USMC; U.S. Ambassador David J. Dunford; and Dr. Khuram Iqbal.

Cross-Technology Communication for Internet of Things Xiuzhen Guo,Yuan He,Yunhao Liu,2023-07-31 Cross-technology communication (CTC) is a technology that enables direct communication between heterogeneous devices that use different wireless standards. It works like a "translator" between two or more wireless technologies. CTC not only creates a new avenue for inter-operation and data exchange between wireless devices but also enhances the ability to manage wireless networks. This book focuses on the enabling technology CTC and introduces readers to a variety of CTC techniques in heterogeneous wireless networks. These techniques can be divided into two categories: packet-level CTCs based on energy modulation and channel intervention; and physical-level CTCs based on cross-demapping, digital emulation, and split encoding. The book offers a comprehensive comparison and analysis, granting readers a deeper understanding of CTC techniques in terms of throughput, reliability, hardware modification, and concurrency. Moreover, it highlights upper-layer CTC application scenarios and cutting-edge developments, which include but are not limited to interference management, channel quality estimation, network routing, etc. The book is intended for all readers – e.g., researchers, students, and even professionals – who are interested in the areas of wireless networking, wireless communication, mobile computing, and Internet of Things. The findings and summaries presented here can help: 1) guide researchers to rethink CTC techniques in connection with design methodology; 2) further advance the infrastructure of future IoT by introducing CTC; and 3) enable important IoT applications by delivering ubiquitous network connectivity.
