An Improved Version of NCOREL: A Computer Program for 3-D Nonlinear Supersonic Potential Flow Computations Michael J. Siclari, 1988 A computer code called NCOREL (for Nonconical Relaxation) has been developed to solve for supersonic full potential flows over complex geometries. The method first solves for the conical at the apex and then marches downstream in a spherical coordinate system. Implicit relaxation techniques are used to numerically solve the full potential equation at each subsequent crossflow plane. Many improvements have been made to the original code including more reliable numerics for computing wing-body flows with multiple embedded shocks, inlet flow through simulation, wake model and entropy corrections. Line relaxation or approximate factorization schemes are optionally available. Improved internal grid generation using analytic conformal mappings, supported by a simple geometric Harris wave drag input that was originally developed for panel methods and internal geometry package are some of the new features.

Rewriting Techniques and Applications Vincent van Oostrom, 2004-08-24 This volume contains the proceedings of the 15th International Conference on Rewriting Techniques and Applications (RTA 2004), which was held June 2- 5, 2004, at the RWTH Aachen in Germany. RTA is the major forum for the presentation of research on all aspects of rewriting. Previous RTA conferences took place in Dijon (1985), Bordeaux (1987), Chapel Hill (1989), Como (1991), Montreal (1993), Kaiserslautern (1995), Rutgers (1996), Sitges (1997), Tsukuba (1998), Trento (1999), Norwich (2000), Utrecht (2001), Copenhagen (2002), and Valencia (2003). The program committee selected 19 papers for presentation, including?ve system descriptions, from a total of 43 submissions. In addition, there were invited talks by Neil Jones, Aart Middeldorp, and Robin Milner. Many people helped to make RTA 2004 a success. I am

grateful to the members of the program committee and the external referees for reviewing the submissions and maintaining the high standards of the RTA conferences. It is a great pleasure to thank the conference chair Jurgen · Giesl and the other members of the local organizing committee. They were in charge of the local organization of all events partaking in the Federated Conference on Rewriting, Deduction, and Programming (RDP). Apart from RTA 2004, these events were: - 2nd International Workshop on Higher-Order Rewriting (Delia Kesner, Femke van Raamsdonk, and Joe Wells), - 5th International Workshop on Rule-Based Programming (Slim Abdennadher and Christophe Ringeissen), - 13th International Workshop on Functional and (Constraint) Logic Programming (Herbert Kuchen), - IFIP Working Group 1.

Medicine Meets Virtual Reality 20 J.D. Westwood, 2013-03-06 Since 1992, when it began as the Medicine Meets Virtual Reality conference, NextMed/MMVR has been a forum for researchers utilizing IT advances to improve diagnosis and therapy, medical education, and procedural training. Scientists and engineers, physicians and other care providers, educators and students, military medicine specialists, futurists, and industry: all come together with the shared goal of making healthcare more precise and effective. This book presents the proceedings of the 20th NextMed/MMVR conference, held in San Diego, California, USA, in February 2013. It covers a wide range of topics: simulation, modeling, imaging, data visualization, haptics, robotics, sensors, interfaces, plasma medicine, and more. Key applications include simulator design, information-guided therapies, learning tools, mental and physical rehabilitation, and intelligence networking. During the past two decades, healthcare has been transformed by progress in computer-enabled technology, and NextMed/MMVR has played a prominent role in this transformation.

The Language of Pain Chryssoula Lascaratou, 2007 How is the universal, yet private and subjective, experience of pain talked about by different people in everyday encounters? What does the analysis of pain-related lexico-phraseological choices, grammatical structures, and linguistic metaphors reveal as to how pain is perceived and experienced? Are pain utterances primarily used to express or to describe this experiential domain? This is the first book that investigates such questions from both a functional and a cognitive perspective: it combines two converging usage-based theoretical models in a systematic linguistic inquiry of the construal of pain in everyday language. This work is based on a specialised electronic corpus of Greek naturally-occurring dialogues in a health care context, the underlying assumption being that in the absence of factual evidence intuition about language cannot reliably detect or predict patterns of usage. Comparing Greek with English data, this book significantly contributes to the development of this research field cross-linguistically.
