Mapping Daniel Dorling, David Fairbairn, 2013-10-08 Illustrates how maps tell us as much about the people and the powers which create them, as about the places they show. Presents historical and contemporary evidence of how the human urge to describe, understand and control the world is presented through the medium of mapping, together with the individual and environmental constraints of the creator of the map.

Process Mapping V. Daniel Hunt, 1996-02-01 A business organization, like a human body, is only as effective as its various processes. Pretty obvious, right? Yet, as V. Daniel Hunt demonstrates in this groundbreaking book, the failure to appreciate this obvious fact is the reason most reengineering schemes fail. Managers whose job it is to improve company performance, like physicians who work to improve patient health, must develop a clear picture of how each process fits into the overall organizational structure; how it ought to function; and how well it is performing at any given moment; before they can form a diagnosis or devise a treatment strategy. Fortunately, a powerful new analytical tool that has emerged in recent years helps you to do all of that and much more. Developed at General Electric, process mapping has been implemented in companies around the globe, and the results have been simply astonishing. Now find out how to make this breakthrough reengineering technology work for your organization in *Process Mapping*. The first and only hands-on guide of its kind, *Process Mapping* arms you with a full complement of state-of-the-art tools and techniques for assessing existing business processes and developing a detailed road map for ongoing change and improvement. He shows you how to create a process mapping team and helps you select the best-buy process mapping tools for the job. He explains how to gather vital information about your business processes via focused interviews and other interview techniques, and how to use this data in implementing process mapping. He also offers expert advice on how to apply your process map to significantly improve business functions and bottom-line performance. Hunt draws upon the experiences of companies around the world whose process mapping success stories will be a source of inspiration and instruction. You'll find out just how process mapping was put to use--and the results it achieved--at General Electric, IBM, NASA, Tandy Electronics, Shawmut National Bank, Fluor Daniel, Exxon, and other leading product and service firms. Mapping the End of Empire Aiyaz Husain, 2014-04-14 By 1945 Washington and London envisioned a new era in which the U.S. shouldered global responsibilities while Britain focused its regional interests narrowly. *Mapping the End of Empire* reveals how Anglo-American perceptions of geography and perspectives on the Muslim world shaped postcolonial futures from the Middle East to South Asia.

Mapping the Total Value Stream Mark A. Nash, Sheila R. Poling, 2011-03-23 *Mapping the Total Value Stream* defines and elaborates on the concepts of value stream mapping (VSM) for both production and transactional processes. This book reshapes and extends the lessons originally put forward in a number of pioneering works including the popular *Value Stream Management for the Lean Office*. It reinforces fundamental concepts and theoretical models with real-world applications and complete examples of the value stream mapping technique. To educate VSM mappers on the specific mechanics of the technique, the text provides in-depth explanations for commonly encountered situations. The authors also provide a more complete perspective on the concept of availability. While they discuss availability of equipment in transactional processes, they extend the concept by elaborating on availability as it applies to employees. The calculation of process lead time for work queues is taken to an advanced level – not only is the calculation of this lead time explained, but the text also covers the very real possibility of having more work in the queue than available time. While previous books have focused on only production process VSM or transactional process VSM, this work meets the real needs of both manufacturers and service sector organizations by dealing with both types. It goes beyond explaining each scenario, to teach readers what techniques are commonly applicable to both, and also explains areas of difference so that mappers will be able to readily adapt to whatever unique situations present themselves.

Introduction to Web Mapping Michael Dorman, 2020-01-28 A web map is an interactive display of geographic information, in the form of a web page, that you can use to tell stories and answer questions. Web maps have numerous advantages over traditional mapping techniques, such as the ability to display up-to-date or even real-time information, easy distribution to end users, and highly customized interactive content. *Introduction to Web Mapping* teaches you how to develop online interactive web maps and web mapping applications, using standard web technologies: HTML, CSS and JavaScript. The core technologies are introduced in Chapters 1-5, focusing on the specific aspects which are most relevant to web mapping. Chapters 6-13 then implement the material and demonstrate key concepts for building and publishing interactive web maps.

Mapping the Cold War Timothy Barney, 2015-04-13 In this fascinating history of Cold War cartography, Timothy Barney considers maps as central to the articulation of ideological tensions between American national interests and international aspirations. Barney argues that the borders, scales, projections, and other conventions of maps prescribed and constrained the means by which foreign policy elites, popular audiences, and social activists navigated conflicts between North and South, East and West. Maps also influenced how identities were formed in a world both shrunk by advancing technologies and marked by expanding and shifting geopolitical alliances and fissures. Pointing to the necessity of how politics and values were spatialized in recent U.S. history, Barney argues that Cold War-era maps themselves had rhetorical lives that began with their conception and production and played out in their circulation within foreign policy circles and popular media. Reflecting on the ramifications of spatial power during the period, *Mapping the Cold War* ultimately demonstrates that even in the twenty-first century, American visions of the world--and the maps that account for them--are inescapably rooted in the anxieties of that earlier era.

Mapping Trophy Bucks Brad Herndon, 2003-09-17 Using Topographic Maps to Find Deer Topographic maps and aerial photos can lead you right to the biggest bucks you've ever seen. You just have to know how to use them. Brad Herndon takes the mystery out of finding deer with maps. Through years of dedicated hunting and careful study of maps and photos, Herndon has perfected the use of maps to find the routes deer travel. And once you know where the deer will be headed you can establish the perfect ambush site. Maps are often the forgotten link in scouting prime deer habitat. Yet because they show you all the hills, gullies, rivers and ridges, you can learn the lay of the land without walking mile after unproductive

mile. Maps won't eliminate the need to get in the woods, but they will tell the best places to start your search for the buck of your dreams. Herndon also shows hunters how to use the latest Internet and computer technology to personalize any map. Mark your stand locations, the locations of deer sign, even note the best possible wind direction to make your hunt a success. If you hunt deer, let Mapping Trophy Bucks lead you right to where the big boys hide. The rest is up to you.

Mapping Decline Colin Gordon,2014-09-12 Once a thriving metropolis on the banks of the Mississippi, St. Louis, Missouri, is now a ghostly landscape of vacant houses, boarded-up storefronts, and abandoned factories. The Gateway City is, by any measure, one of the most depopulated, deindustrialized, and deeply segregated examples of American urban decay. Not a typical city, as one observer noted in the late 1970s, but, like a Eugene O'Neill play, it shows a general condition in a stark and dramatic form. Mapping Decline examines the causes and consequences of St. Louis's urban crisis. It traces the complicity of private real estate restrictions, local planning and zoning, and federal housing policies in the white flight of people and wealth from the central city. And it traces the inadequacy—and often sheer folly—of a generation of urban renewal, in which even programs and resources aimed at eradicating blight in the city ended up encouraging flight to the suburbs. The urban crisis, as this study of St. Louis makes clear, is not just a consequence of economic and demographic change; it is also the most profound political failure of our recent history. Mapping Decline is the first history of a modern American city to combine extensive local archival research with the latest geographic information system (GIS) digital mapping techniques. More than 75 full-color maps—rendered from census data, archival sources, case law, and local planning and property records—illustrate, in often stark and dramatic ways, the still-unfolding political history of our neglected cities.

Mapping an Empire of American Sport Mark Dyreson,J.A. Mangan,Roberta J. Park,2013-09-13 Since the mid-nineteenth century, the United States has used sport as a vehicle for spreading its influence and extending its power, especially in the Western Hemisphere and around the Pacific Rim, but also in every corner of the rest of the world. Through modern sport in general, and through American pastimes such as baseball, basketball and the American variant of football in particular, the U.S. has sought to Americanize the globe's masses in a long series of both domestic and foreign campaigns. Sport played roles in American programs of cultural, economic, and political expansion. Sport also contributed to American efforts to assimilate immigrant populations. Even in American games such as baseball and football, sport has also served as an agent of resistance to American imperial designs among the nations of the Western hemisphere and the Pacific Rim. As the twenty-first century begins, sport continues to shape American visions of a global empire as well as framing resistance to American imperial designs. Mapping an Empire of American Sport chronicles the dynamic tensions in the role of sport as an element in both the expansion of and the resistance to American power, and in sport's dual role as an instrument for assimilation and adaptation. This book was published as a special issue of the International Journal of the History of Sport.

This accessible text explains the day-to-day practical application of crime analysis for mapping. Factual data from real crime analysis is included to reflect actual crime patterns, trends, series and what an officer or analyst can expect to see when he or she sits down to analyze and apply concepts learned. Special topics discussed include: an up-to-date discussion of the current crime trends in rural and urban areas, the major ecological theories of crime, the notion of geographic profiling, empirical research using crime mapping tools, basic mapping terminology, and more. New to the Second Edition: • All exercises and examples have been updated to reflect ArcGIS 10.0 and Excel 2010. • Includes a workbook with engaging exercises to offer hands-on application of the material. • All exercises and graphics have been updated to account for ArcGIS 10.0 and Excel 2010, though all exercises and examples for Excel 2007 remain. • Contains a NEW chapter discussing the various types of policing, with an emphasis on the Compstat process, intelligence led policing, and problem-oriented policing.

Concept Mapping Pamela McHugh Schuster,2020-01-06 Looking for an easier path to care planning? Create a map! A concept map is your guide to nursing care in any clinical setting.

Crime Mapping and Spatial Data Analysis using R Juan Medina Ariza,Reka Solymosi,2023-04-27 Crime mapping and analysis sit at the intersection of geocomputation, data visualisation and cartography, spatial statistics, environmental criminology, and crime analysis. This book brings together relevant knowledge from these fields into a practical, hands-on guide, providing a useful introduction and reference material for topics in crime mapping, the geography of crime, environmental criminology, and crime analysis. It can be used by students, practitioners, and academics alike, whether to develop a university course, to support further training and development, or to hone skills in self-teaching R and crime mapping and spatial data analysis. It is not an advanced statistics textbook, but rather an applied guide and later useful reference books, intended to be read and for readers to practice the learnings from each chapter in sequence. In the first part of this volume we introduce key concepts for geographic analysis and representation and provide the reader with the foundations needed to visualise spatial crime data. We then introduce a series of tools to study spatial homogeneity and dependence. A key focus in this section is how to visualise and detect local clusters of crime and repeat victimisation. The final chapters introduce the use of basic spatial models, which account for the distribution of crime across space. In terms of spatial data analysis the focus of the book is on spatial point pattern analysis and lattice or area data analysis.

Process Mapping and Management Sue Conger,2011-06-13 This book provides a blueprint of how to develop a discipline for process management that applies to any type of orientation. As the economy moves toward a services orientation, companies are struggling with how to improve their offerings. Process management is a key component of the services that companies provide, and author Sue Conger has written a helpful tool to learn more of this key component now helping companies around the world. This book has three main parts: mapping, improvement, and error-proofing and metrics. In the first part—mapping—the reader will learn how to map a process so that the map is immediately understandable for identifying the roles, work steps, and automation support used in process delivery. The second part improvement—provides a series of techniques for defining, prioritizing, and analyzing problems from several perspectives. The first perspective is called “leaning,” and its purpose is to remove waste from an existing process. The second perspective is “cleaning,” during which the remaining steps following leaning are analyzed for possible improvement. The third perspective is “greening,” which explores opportunities and trade-offs for outsourcing, coproduction, and environmental improvements related to the process. The final part of the book—error-proofing and metrics—presents several techniques for ensuring risk mitigation for the new process and for measuring changes that define their impacts and discusses a method for proposing changes to executives in a “case for change.” And throughout this book, Conger provides a blueprint of how to develop a discipline for process management that applies to any type of orientation.

Plant and Vegetation Mapping Franco Pedrotti,2012-08-16 The book is concerned principally with geobotanical mapping. Geobotany is a broad science that deals with the study of species and of vegetation communities in relation to the environment; it includes other, perhaps more familiar sciences, such as plant geography, plant ecology, and chorology, and phytosociology (plant sociology). Geobotanical cartography is a field of thematic cartography that deals with the interpretation and representation, in the form of maps, of those spatial and temporal phenomena that pertain to flora, vegetation, vegetated landscapes, vegetation zones, and phytogeographical units. The production of a geobotanical map represents the last stage in a cognitive process that begins with observations in the field and continues with the collection of sample data, interpretation of the phenomena observed, and their appropriate cartographic representation; geobotanical cartography is closely tied to the concepts and scope of geobotany in general

Value Stream Mapping for Lean Development Drew A. Locher,2008-05-02 Written by one of the world's most respected consultants on Lean, this work presents a methodology for value stream mapping that is appropriate for any organization, whether it be service or product oriented. Over the past 25 years, Locher has proven just how powerful this process is, having employed it in healthcare, transportation, distribution, education, financial services, and manufacturing environments. Illustrating his methodology through the example of the imaginary DevelopTek company, he explains how to: Identify development waste Assess an organization's current state and develop a Current State Map Apply Lean principles to create a Future State Map

Provision Mapping Anne Massey,2013 This highly practical book contains all the guidance and resources a school will need in order to implement an efficient and effective system of pupil progress tracking and evaluative Provision Mapping. It is a tried and tested system that has been shown to improve outcomes for all pupils, including those with SEN, and sits at the very heart of school self-evaluation. Throughout this book, teachers will find achievable solutions to the problems schools face in trying to ensure that their practice results in all pupils making good progress. Anne Massey has adapted the existing government-produced Provision Mapping system and developed it into a more evaluative framework that links a number of school improvement actions together. All the recommendations in this book: - have been tried and tested in Primary schools, Special schools and PRUs; - will result in a reduction in bureaucracy and paperwork for SENCOs; - will provide an enhanced understanding of inclusion by teachers; - foster an improved understanding of 'value for money'. As a result of implementing a more efficient Provision Mapping system, better communication will be achieved within the school, with parents and with Local Education Authorities. Senior managers, leadership teams, SENCOs and other educational professionals will find the guidance and support provided by this toolkit invaluable. Provision Mapping will also be of value to those studying the more SEN-specific postgraduate diplomas or Masters level qualifications--
