The Art of Empirical Investigation Julian Lincoln Simon, 2003-09-12 Julian Simon was known for his methodical, and often controversial, writings challenging conventional beliefs about overpopulation, pollution, disappearing farmland, and the scarcity of energy sources and raw materials. But throughout his works is a common theme: that responsible, unbiased research and examination of the data is indispensable to formulating a well-informed and accurate opinion. *The Art of Empirical Investigation* teaches student, professor, researcher, and those interested in ascertaining the truth about social issues just how to proceed. *The Art of Empirical Investigation* is a textbook on the basics of social-scientific research. It discusses all the important empirical methods used in social science, and its examples, drawn from a wide variety of academic and applied fields, illustrate the use of each method in its most appropriate context. The actual decisions a researcher must make at every stage of a project are emphasized, as well as obstacles to knowledge--such as observer bias, deception, unreliability of data, and sampling costs--and how to overcome them. Presupposing nothing, the book introduces the reader to the foundations of empirical social-science research, regardless of a specific field. It also makes an important contribution to beginning researchers' understanding of an operational definition of causality, which cuts through philosophical obscurity and teaches the researcher how to decide whether or not a given relationship is causal. James E. Katz contributes an introduction written for this new edition, in which he explains why, after over three decades, this remains one of the best books on research methods around. Written in a clear, informal style, *The Art of Empirical Investigation* is a must for the student and teacher of the social sciences, researchers, and journalists. Julian L. Simon (1932-1998) was professor of business administration at the University of Maryland and Distinguished Senior Fellow of the Cato Institute. His books, as author or editor, include *Population Matters*, *Hoodwinking the Nation*, and *The Economics of Population: Key Classic Writing*, all available from Transaction. James E. Katz is professor of communication at the School of Communication, Information and Library Studies at Rutgers University. He is the author of *Machines That Become Us* and *Connections*, both available from Transaction.

The Prison Cell Jennifer Turner, Victoria Knight, 2020-07-08 This book advances conceptualisations and empirical understanding of the prison cell. It discusses the complexities of this specific carceral space and addresses its significance in relation to the everyday experiences of incarceration. The collected chapters highlight the array of processes and practices that shape carceral life, adding the cell to a rich area of discussion in penal scholarship, criminology, anthropology, sociology and carceral geography. The chapters highlight key aspects such as penal philosophies, power relationships, sensory and emotional engagements with place to highlight the breadth and depth of interdisciplinary perspectives on the prison cell: a contested place of home, labour and leisure. The Prison Cell's empirical attention is global in its consideration, bringing together both contemporary and historical work that focuses upon the cell in the Global North and South including examples from a variety of geographical locations and settings, including police custody, prisons and immigrant detention centres. This book is an important and timely intervention in the growing and topical field of carceral studies. It presents the only standalone collection of essays with a sole focus on the space of the cell.

Speaking of Animals Robert Palmatier, 1995-04-30 No other nonhuman source has served as the basis for more metaphors than animals. *Speaking of Animals* is a dictionary of animal metaphors that are current in American English. It is comprehensive, historical, and metaphor-based. Each entry refers to the other dictionaries that catalog that same metaphor, and the dates of first appearance in writing are supplied, where possible, for both the metaphor and the name of the source. The main text is organized alphabetically by metaphor rather than by animal or animal behavior; all the metaphors are classified according to their animal source in a list at the end of the book. An animal metaphor is a word, phrase, or sentence that expresses a resemblance or similarity between someone or something and a particular animal or animal class. True metaphors are single words, such as the noun tiger, the verb hog, and the adjective chicken. Phrasal metaphors combine true metaphors with other words, such as blind tiger, hog the road, and chicken colonel. Other animal metaphors take the form of similes, such as like rats leaving a sinking ship and prickly as a hedgehog. Still others take the form of proverbs, such as Don't count your chickens before they hatch and Let sleeping dogs lie. The horse is the animal most frequently referred to in metaphors, followed closely by the dog. The Bible is the most prolific literary source of animal metaphors, followed closely by Shakespeare.

Bazaar Literature Leslee Thorne-Murphy, 2022-11-21 Bazaar Literature reorients our understanding of Victorian social reform fiction by reading it in light of the copious amount of literature generated for charity bazaars. Bazaars were ubiquitous during the nineteenth century, part of the vibrant and

massive private sector response to a rapidly industrializing society. Typically organized and run by women, charity bazaars were often called fancy fairs since they specialized in ladies' hand-crafted fancy work. Indeed, they were a key method women used to intervene in political, social, and cultural affairs. Yet their conventional purpose—to raise money for charity—has led to their being widely overlooked and misunderstood. *Bazaar Literature* remedies these misconceptions by demonstrating how the literature written in conjunction with bazaars shaped the social, political, and literary movements of its time. This study draws upon a wide variety of texts printed to be sold at bazaars, including literature by Robert Louis Stevenson, Harriet Martineau, and Elizabeth Barrett Browning, alongside fictional depictions of fancy fairs by Charlotte Yonge, George Eliot, Frances Trollope, and Anthony Trollope. The book revises our understanding of the larger literary market in social reform fiction, revealing a parodic, self-critical strain that is paradoxically braided with strident political activism and its realist sensibilities.

Operations Research and Artificial Intelligence: The Integration of Problem-Solving Strategies Donald E. Brown, Chelsea C. White III, 2012-12-06 The purpose of this book is to introduce and explain research at the boundary between two fields that view problem solving from different perspectives. Researchers in operations research and artificial intelligence have traditionally remained separate in their activities. Recently, there has been an explosion of work at the border of the two fields, as members of both communities seek to leverage their activities and resolve problems that remain intractable to pure operations research or artificial intelligence techniques. This book presents representative results from this current flurry of activity and provides insights into promising directions for continued exploration. This book should be of special interest to researchers in artificial intelligence and operations research because it exposes a number of applications and techniques, which have benefited from the integration of problem solving strategies. Even researchers working on different applications or with different techniques can benefit from the descriptions contained here, because they provide insight into effective methods for combining approaches from the two fields. Additionally, researchers in both communities will find a wealth of pointers to challenging new problems and potential opportunities that exist at the interface between operations research and artificial intelligence. In addition to the obvious interest the book should have for members of the operations research and artificial intelligence communities, the papers here are also relevant to members of other research communities and development activities that can benefit from improvements to fundamental problem

solving approaches.
