The Music and Life of Theodore "Fats" Navarro Leif Bo Petersen,Theo Rehak,2009-08-24 The Music and Life of Theodore 'Fats' Navarro: Infatuation is the first comprehensive study of the jazz trumpeter Theodore 'Fats' Navarro. It provides biographical and discographical information on this talented musician, whose premature death from tuberculosis at 26 robbed the jazz world of his brilliance. Through an analysis of his recorded legacy, this book offers new perspectives on Navarro's role in the history and emergence of Bebop. Through years of study and collecting ephemera, some of which is reprinted here, Leif Bo Petersen and Theo Rehak depict an inclusive history of Navarro and his music. Their information is based on interviews with musicians and people in the music business, contemporary newspaper and magazine articles, and the music itself, which has not been commonly known or described until now. The book features images, musical examples, and depictions of Navarro's recordings, and it provides several appendixes, including explanations of contemporary recording techniques and discographical terms, lists of Navarro's recordings and compositions, and a chronological overview of Navarro's performances, recording sessions, and engagements. Complete with a comprehensive list of sources and a full index, this volume presents a host of new and useful information for anyone interested in jazz and its history.

Machine Intelligence Andy Clark,Toribio,2012-11-12 Summarizes and illuminates two decades of research Gathering important papers by both philosophers and scientists, this collection illuminates the central themes that have arisen during the last two decades of work on the conceptual foundations of artificial intelligence and cognitive science. Each volume begins with a comprehensive introduction that places the coverage in a broader perspective and links it with material in the companion volumes. The collection is of interest in many disciplines including computer science, linguistics, biology, information science, psychology, neuroscience, iconography, and philosophy. Examines initial efforts and the latest controversies The topics covered range from the bedrock assumptions of the computational approach to understanding the mind, to the more recent debates concerning cognitive architectures, all the way to the latest developments in robotics, artificial life, and dynamical systems theory. The collection first examines the lineage of major research programs, beginning with the basic idea of machine intelligence itself, then focuses on specific aspects of thought and intelligence, highlighting the much-discussed issue of consciousness, the equally important, but less densely researched issue of emotional response, and the more traditionally philosophical topic of language and meaning. Provides

a gamut of perspectives The editors have included several articles that challenge crucial elements of the familiar research program of cognitive science, as well as important writings whose previous circulation has been limited. Within each volume the papers are organized to reflect a variety of research programs and issues.
