The Therapist as Listener Peter Wilberg,2004 Listening is clearly central to the practice of both counselling and psychotherapy. Given this, it is quite extraordinary how little thought has been given to the nature of therapeutic listening and to the cultivation and evaluation of the therapist as listener. Instead, listening is a subject marginalised in both the theoretical literature on psychotherapy and in the practical training of counsellors and psychotherapists .In this collection of essays and articles by Peter Wilberg, the thinking of Martin Heidegger provides the platform for an exploration of the deeper nature of listening - not simply as a passive prelude to therapeutic or diagnostic responses, but as a mode of active inner communication with others. What Wilberg calls Maieutic Listening is not a new form of psychotherapy, but the innately therapeutic essence of listening as such - understood not as a mere therapeutic 'skill' but as a our most basic way of being and bearing with others in pregnant silence.

Listener Supported Jack W. Mitchell,2005-03-30 Public radio stands as a valued national institution, one whose fans and listeners actively support it with their time and their money. In this new history of this important aspect of American culture, author Jack W. Mitchell looks at the dreams that inspired those who created it, the all-too- human realities that grew out of those dreams, and the criticism they incurred from both sides of the political spectrum. As National Public Radio's very first employee, and the first producer of its legendary All Things Considered, Mitchell tells the story of public radio from the point of view of an insider, a participant, and a thoughtful observer. He traces its origins in the progressive movement of the 20th century, and analyzes the people, institutions, ideas, political forces, and economic realities that helped it evolve into what we know as public radio today. NPR and its local affiliates have earned their reputation for thoughtful commentary and excellent

journalism, and their work is especially notable in light of the unique struggles they have faced over the decades. This comprehensive overview of their mission will fascinate listeners whose enjoyment and support of public radio has made it possible, and made it great.

The Preacher as 'First Listener' Filip De Cavel, The preacher's weekly assignment is brutally repetitive: Fill the blank page by Sunday, at least twice a month, if not, even more. This book offers a biblical, theological and empirical grounding to support the preacher's self-reflective, listening, and sermonizing practices in order for the preacher to be aware of his/her spirituality of listening and discernment.

Big Podcast – Grow Your Podcast Audience, Build Listener Loyalty, and Get Everybody Talking About Your Show David Hooper,2019-03-12 Is it worth doing a podcast if nobody listens? You started

your podcast because you want to: - Spread an important message - Share your passion - Make money But your podcast hasn't quite taken off like you thought it would. What happened? This book is for podcasters who can't quite figure out what they're doing wrong (and are ready to do things right). You'll learn: - Why your "natural personality" may be repelling to people and how to make it attract listeners to your podcast like a magnet (See p198) - What to do when a company tries to "lowball" you on advertising fees (do nothing, except send them the email on p424) - It's easy to screw up an interview. To be sure you don't run into any problems, use my "guest contract" on p311. - A six-word "trick" (learned from a 20-year radio veteran) that will instantly make you a better host (it's on p210) - 9 reasons to kill an interview before it happens – ignore these "red flags" and you'll be sorry (p299) - What Victoria's Secret models know about podcasting (even though you never hear them talk) – this lesson starts on p208! - Nervous on the mic? You have lots of company – 75% of podcasters to be exact. I give you a 5-step way to cure your "stage fright" on p229. - If you're scared of getting bad reviews, don't worry – I have three simple ways to handle critics on p236 (two of which can turn critics into fans) - Why copying top podcasters may be killing your podcast (I share the story on p116) and how to develop a podcasting style that works for you (and will attract more listeners) - My 3-step "episode teaser" formula – it's boring, but it works (get it on p110) - Thinking of doing a "daily" podcast? You must read p103 before you start. - Want to impress a guest? See the chapter starting on p321 for my 3-step followup "ritual" that will make being on your podcast unforgettable (and encourage guests to promote your episodes) And that's just the start ... This book contains my complete system on how to attract listeners, deliver your message effectively, and build a big podcast. You can't build a big podcast on hope. But you can build a big podcast. And if you're ready to do just that, read this book.

GSM Z. Zvonar,Peter Jung,Karl Kammerlander,1998-12-31 The GSM system is undoubtedly the most successful second-generation digital mobile radio system. One of the key factors for this exceptional performance is the constant evolution of the GSM system and its derivatives. GSM: Evolution towards 3rd generation systems addresses new concepts in the GSM system, dealing both with standardized features as well as with theoretically and technologically feasible improvements which contribute to evolutionary changes in general. Ongoing efforts in GSM standardization are focused on Phase 2+ with gradual additions for a fast and modular evolution. Speech remains the prime service of cellular systems, with ongoing work on spectral efficiency taking into account the tradeoff between cost of the system and transmission quality. Most of the notable results from novel speech service implementations are addressed herein such as new EFR speech codec and Advanced Speech Cell Items (ASCI). Data capability in Phase 2+ has been covered under General Packet Radio Service (GPRS) and High-Speed Circuit Switched Data (HCSD) work items. Initiatives under CAMEL cover intelligent networking (IN) within the GSM framework. Dual mode operation in GSM includes not only dual-band solutions but also inter-networking with other systems like DECT or satellite systems. Numerous specific wireless applications such as inbuilding communications, WLL, etc., have also been developed based on GSM. To support the required changes a number of issues have to be solved in the radio part of the system. Deployment of adaptive antenna arrays for enhanced quality, interference suppression techniques and slow frequency hopping are among the techniques presented in the GSM framework. Dynamic evolution of GSM presents a platform for the introduction of UMTS. Presently, efforts are directed towards the standardization of the UMTS air interface in ETSI. Major trends in progress towards new radio interfaces are outlined including contributions from pan-European projects such as ATDMA, which was carried out under the RACE II framework, and the ACTS

project AC090 FRAMES. GSM: Evolution towards 3rd generation systems comprises a collection of specially written contributions from GSM specialists. The information presented is essential reading for all researchers, engineers and managers working on GSM and third generation wireless systems. This book covers the most important advances in GSM that will have lasting impact on the system influencing third generation wireless systems.

Radio Programming: Tactics and Strategy Eric Norberg,1996-05-07 A practical handbook for programming directors, this guide focuses on achieving specific objectives in today's modern, competitive environment. Radio Programming is designed to convey underlying principles and to assist the programmer in accomplishing specific objectives, without mandating exact implementation methods. Instead, it empowers station management and the PD to implement strategies that will work for the particular format and market niche. Radio Programming will be helpful for neophytes in programming, experienced programmers seeking further growth, air talent seeking to develop skills, and general managers trying to understand programming and effectively manage program directors without stifling creativity. It will also help general managers hire effective programmers. Eric Norberg is the editor and publisher of the Adult Contemporary Music Research Letter and a radio consultant. He has worked as a program director at several radio stations, as on-air talent and general manager, and has also operated a radio production company. For fourteen years he has written a weekly column on radio programming for The Gavin Report, a radio trade publication.

The Silent Listener D J Thorp,2011-07-31 On 2 April 1982 Argentina launched Operation Rosario, the invasion of the Falklands. The British, caught off guard, responded with Operation Corporate. Deployed alongside the rest of the British Army was a small specialist intelligence unit,

whose very existence was unknown to many commanders and whose activities were cloaked in the Official Secrets Act. Trained during the years of the Cold War, the OC of the unit, D J Thorp, was tasked with providing electronic warfare support - interception of Argentinian electronic and radio signals - allowing the British to be in real time receipt of enemy plans long before execution. He personally briefed Col H Jones before the Battle of Goose Green. For the first time in print, The Silent Listener confirms the existence and role of the Special Task Detachment during Operation Coroporate and provides details of the deployment and operational role of a dedicated ground based electronic warfare (EW) weapons facility. It also details the development of electronic warfare during the Cold War period, including the establishment of a communications intercept site on East Island following the cessation of hostilities in the Falklands, and D J Thorp's top secret role in the investigation into the sinking of ARA General Belgrano.

Introduction to Game Physics with Box2D Ian Parberry,2017-09-29 Written by a pioneer of game development in academia, Introduction to Game Physics with Box2D covers the theory and practice of 2D game physics in a relaxed and entertaining yet instructional style. It offers a cohesive treatment of the topics and code involved in programming the physics for 2D video games. It examines the mathematical foundation of game physics and illustrates how it is applied in practice through coding examples. The second half of the book shows you how to use Box2D, a popular open source 2D game physics engine. A companion website provides supplementary material, including source code and videos. This book helps you become a capable 2D game physics programmer through its presentation of both the theory and applications of 2D game physics. After reading the book and experimenting

with the code samples, you will understand the basics of 2D game physics and know how to use Box2D to make a 2D physics-based game.

    Radio Audiences and Participation in the Age of Network Society Tiziano Bonini,Belén Monclús,2014-12-05 This book maps, describes and further explores all contemporary forms of interaction between radio and its public, with a specific focus on those forms of content co-creation that link producers and listeners. Each essay will analyze one or more case studies, piecing together a map of emerging co-creation practices in contemporary radio. Contributors describe the rise of a new class of radio listeners: the networked ones. Networked audiences are made up of listeners that are not only able to produce written and audio content for radio and co-create along with the radio producers (even definitively bypassing the central hub of the radio station, by making podcasts), but that also produce social data, calling for an alternative rating system, which is less focused on attention and more on other sources, such as engagement, sentiment, affection, reputation, and influence. What are the economic and political consequences of this paradigm shift? How are radio audiences perceived by radio producers in this new radioscape? What's the true value of radio audiences in this new frame? How do radio audiences take part in the radio flow in this age? Are audiences' interactions and co-creations overrated or underrated by radio producers? To what extent

listeners' generated content can be considered a form of participation or free labour exploitation? What's the role of community radio in this new context? These are some of the many issues that this book aims to explore.
