Tracking your foods and counting calories isn't all that different from learning investing or accounting: Both are skills that take some time to learn and require informed practice to get better at. Both benefit from the help of keeping track of everything with the help of a ledger. You can identify what's working and what's not when you are keeping track of your spending. The same goes for calories and what kind of meals you eat The main difference is that with investing and putting money in the bank, your goal is to gain (money) but with meal tracking and calorie counting, your goal is to lose (weight)...and to eat better. Both have different objectives but the techniques to achieve them are pretty much the same and can turn into a lifetime skill that keeps giving to those who take the time to learn them. You can also use this meal planner to design and follow your diets whether it be Vegan, Keto, Paleo, Atkins. South Beach, Low-carb or just make your own. Learning how to control and understand your food intake is essential knowledge to controlling your weight and your health. If you were investing and spending money recklessly, indulgently and with little thought, you wouldn't be that surprised if you ended up poor or struggling financially. Why would those rules change when it comes to food? Recklessly spending your calories without much consideration is like blowing your money on bad investments with what it does to your weight, health, stamina, and self-esteem.
