The Joint Arctic Weather Stations Daniel Heidt,P. Whitney Lackenbauer,2022-04-15 The Joint Arctic Weather Stations were five meteorological and scientific monitoring stations constructed at Resolute, Eureka, Mould Bay, Isachsen, and Alert with the cooperation of the Canadian Department of Transport's meteorological branch and the United States Weather Bureau. From 1947 to the early 1970s as few as four Canadians and four Americans worked and lived at each of the four satellite stations, observing and collecting scientific data. This is the first systematic account of the Joint Arctic Weather Stations, a project that profoundly shaped state activates and scientific inquiry in the Arctic Archipelago. Drawing on extensive archival evidence, unpublished personal memoirs, and interviews with former employees, *The Joint Arctic Weather Stations* analyzes the diplomatic, scientific, social, military, and environmental dimensions of the program alongside each station as a nexus of state planning and personal agency. Contrary to previous scholarship, *The Joint Arctic Weather Stations* reveals that Canadian officials sought--and achieved--a firm policy that afforded effective control of Canada's Arctic while enjoying the advantages of American contribution to the joint meteorological program. It explores the changing ways science was conducted over time and how the details of everyday life at remote stations, from the climate to leisure activities to debates over alcohol, hunting, and leadership, shaped the program's effectiveness. An exploration of the full duration of the Joint Arctic Weather Stations from high-level planning and diplomacy to personal interactions in the stations makes this book an essential exploration of collaborative polar science in the North American Arctic.

Metmen in Wartime Morley K. Thomas, 2001 Everybody's talking about the weather... Metmen in Wartime is a detailed account of the meteorological services in practice in Canada during World War II. Why were forecasts so crucial during the war? For anti-submarine warfare and convoy protection operations from bases along the Atlantic and Pacific coasts. But Metmen is also a thorough examination of the men behind the forecasts: the nearly 400 science graduates who became metmen and were stationed at flying training schools. This book explains the importance of aviation weather forecasts and instruction in meteorology for student pilots at the Royal Canadian Air Force stations established under the British Commonwealth Air Training Plan. Cooperation with the United States military weather services is also examined.
