The Cold Start Problem Andrew Chen, 2021-12-07 A startup executive and investor draws on expertise developed at the premier venture capital firm Andreessen Horowitz and as an executive at Uber to address how tech's most successful products have solved the dreaded cold start problem"—by leveraging network effects to launch and scale toward billions of users. Although software has become easier to build, launching and scaling new products and services remains difficult. Startups face daunting challenges entering the technology ecosystem, including stiff competition, copycats, and ineffective marketing channels. Teams launching new products must consider the advantages of "the network effect," where a product or service's value increases as more users engage with it. Apple, Google, Microsoft, and other tech giants utilize network effects, and most tech products incorporate them, whether they're messaging apps, workplace collaboration tools, or marketplaces. Network effects provide a path for fledgling products to break through, attracting new users through viral growth and word of mouth. Yet most entrepreneurs lack the vocabulary and context to describe them—much less understand the fundamental principles that drive the effect. What exactly are network effects? How do teams create and build them into their products? How do products compete in a market where every player has them? Andrew Chen draws on his experience and on interviews with the CEOs and founding teams of LinkedIn, Twitch, Zoom, Dropbox, Tinder, Uber, Airbnb, and Pinterest to offer unique insights in answering these questions. Chen also provides practical frameworks and principles that can be applied across products and industries. The Cold Start Problem reveals what makes winning networks thrive, why some startups fail to

successfully scale, and, most crucially, why products that create and compete using the network effect are vitally important today.

Practical Program Evaluation Huey T. Chen, Huey-tsyh Chen, 2014-10-06 Introducing students to the real world of evaluation and focusing on issues that arise in professional practice, this book shows readers how to systematically identify stakeholders' needs in order to select the evaluation options best suited to meet those needs.

Theory-Driven Evaluations Huey T. Chen, 1990 A new, comprehensive framework for programme evaluation designed to bridge the gap between the method- and theory-oriented perspectives, is presented in this book, newly available in paper. Chen provides an intensive discussion of the nature and functions of programme theory, approaches to constructing programme theories, and the integration of programme theory with evaluation processes. Specific types of theory-driven evaluations, as well as principles and guidelines for application, are developed for meeting different policy purposes. Application of systematic strategies is illustrated by concrete examples from a variety of evaluation studies in different fields.

China's Medium and Long-Term Science and Technology Program Zhenghong Chen, 2021-08-28 This book conducts a panoramic study on the history of China's Science and Technology which focuses on the Medium and Long-Term Science and Technology Program (MLSTP). In general these Programs have a duration of 5-30 year. This book provides an epochal assessment of the project's conceptual context over the past 60 years.. The author shows that the historical evolution and conceptual development of China's MLSTP are the result of an amalgamation of political, economic and social factors within distinct contemporary contexts. As a national action plan, MLSTP has incorporated many of the factors that go beyond the intentional factors of science and technology. MLSTP is not only a macro vision and blueprint for scientific and technological development; it is also a political act of realizing the national will. While ensuring the MLSTP builds on its great achievements, the author also reflects upon its deficiencies and disadvantages in order to better promote the advancement of science and technology in China. This book comprehensively lays out the historical and theoretical dimensions. Based on a clear vision of historical constructivism the author has compiled the MLSTP philosophy of different eras into a conceptual framework for this era and used this framework to research and analyze the historical and conceptual evolution of MLSTP. Research on MLSTP is important for as enrichment of contemporary studies in the history of science and the science and technology policy. In 2010, more than 60 years after the establishment of the People's Republic of China, the country had enacted 10 MLSTP

programs. This book separates the development of the MLSTP into three different historical eras: the era of economic planning, the era of economic transformation and the new century. Each historical epoch corresponds to a different MLSTP philosophy concept, which enables us to study the conceptual evolution of MLSTP using historical research as our foundation.

Chen Jiongming and the Federalist Movement Leslie Chen, 1999 The local self-government movement in China began in the late Qing, and by the Revolution of 1911 no less than five thousand self-government councils had formed around the country. While the idea of a federated state was cherished by early revolutionaries, a growing conflict between federalist and centralist leaders culminated in the defeat of federalism in the mid-1920s. The story of this movement has since remained hidden

behind Nationalist and Communist accounts of the early revolutionary struggle. This study of Chen Jiongming's political career reopens the record on federalist efforts, focusing on Chen's policies and administrative achievements in Fujian and Guangdong. It describes Chen's role in the tumultuous politics of southern China from 1909 until his death in 1933, including his relationship and notorious break with Sun Yat-sen, the leader of the centralist revolutionaries. Leslie Chen argues that his father's attempts to create a democratic, federalist system in Guangdong were aimed at providing a model for China as a whole. His account is lively and readable; it gives an intimate, yet historically accurate, account of Chen Jiongming's considerable role in early twentieth-century Chinese history. Leslie Chen was born in Guangdong, China. In 1988 he compiled *A Collection of Historiographic Materials for a Biography of Chen Chiung-ming [Jiongming], 1878-1933*. He has published two Chinese-language biographies of Chen Jiongming.

Chen Yi Leta E. Miller,J. Michele Edwards,2020-12-14

Winner of the Leila Webster Memorial Music Award for the International Alliance for Women in Music of the 2022 Pauline Alderman Awards for Outstanding Scholarship on Women in Music Chen Yi is the most prominent woman among the renowned group of new wave composers who came to the US from mainland China in the early 1980s. Known for her creative output and a distinctive merging of Chinese and Western influences, Chen built a musical language that references a breathtaking range of sources and crisscrosses geographical and musical borders without

eradicating them. Leta E. Miller and J. Michele Edwards provide an accessible guide to the composer's background and her more than 150 works. Extensive interviews with Chen complement in-depth analyses of selected pieces from Chen's solos for Western or Chinese instruments, chamber works, choral and vocal pieces, and compositions scored for wind ensemble, chamber orchestra, or full orchestra. The authors highlight Chen's compositional strategies, her artistic elaborations, and the voice that links her earliest and most recent music. A concluding discussion addresses questions related to Chen's music and issues such as gender, ethnicity and nationality, transnationalism, border crossing, diaspora, exoticism, and identity.

Testing Object-Oriented Software David C. Kung,Chen-

Ho Kung,Pei Hsia,Jerry Gao,1998-11-10 Object-oriented programming increases software reusability, extensibility, interoperability, and reliability. Software testing is necessary to realize these benefits. Software testing aims to uncover as many programming errors as possible at a minimum cost. A major challenge to the software engineering community remains how to reduce the cost and improve the quality of software testing. The requirements for testing object-oriented programs differ from those for testing conventional programs. Testing Object-Oriented Software illustrates these differences and discusses object-oriented software testing problems, focusing on the difficulties and challenges testers face. The book provides a general framework for class- and system-level testing and examines object-oriented design criteria and high testability metrics. It offers object-oriented testing techniques, ideas and methods for unit testing, and object-oriented program integration-testing strategy. Readers are shown how they can drastically reduce regression test costs, presented with steps for object-oriented testing, and introduced to object-oriented test tools and systems. In addition to software testing problems, the text covers various test methods developers can use during the design phase to generate programs with good testability. The book's intended audience includes object-oriented program testers, program developers, software project managers, and researchers working with object-oriented testing.

California Cures!: How The California Stem Cell Program Is Fighting Your Incurable Disease! Reed Don C,2018-03-16 Thirteen years ago, America faced an epidemic of chronic disease: cancer, paralysis, blindness, arthritis, Alzheimer's disease, diabetes and more. But California voters said YES! to a \$3 billion stem cell

research program: the awkwardly-named California Institute for Regenerative Medicine (CIRM). Born into battle, the scrappy little state agency was immediately blocked by three years of anti-science lawsuits — but it defeated them all. And then? A quiet triumph. With a focused intensity like the Manhattan Project (but for peaceful purposes, not to build a bomb), scientists funded by CIRM took on the challenges: disease and disability called chronic: incurable. In a series of connected stories, accurate though written to entertain, California Cures relates a war: science against disease, with lives on the line. Think what it means for a paralyzed young man to recover the use of his hands, or for a formerly-blind mother to see her teenaged children — for the first time! Do you know the bubble-baby syndrome? Infants without a proper immune system typically die young; a common cold can kill. But for eighteen babies in a stem cell clinical trial, a different future: they were cured of their disease. No one can predict the pace of science, nor say when cures will come; but California is bringing the fight. The reader will meet the scientists involved, the women and men behind the microscope, and share their struggle. Above all, California Cures is a call for action. Washington may argue about the expense of health care (and who will get it), but California works to bring down the mountain of medical debt: stem cell therapies to ease suffering, and save lives. Will California build on success — and invest \$5 billion more in stem cell research? We have the momentum, says author Don C Reed, We dare not stop short. Chronic disease threatens everyone — we are fighting for your family, and mine!
