What Radiology Residents Need to Know: Chest Radiology Ronald L. Eisenberg, 2019-10-31 This book is an introduction to chest radiology, specifically designed for the needs of first-year residents. On the first rotation in chest imaging, radiology residents are asked to learn significant amounts of information at a fast and unrelenting pace. However, most current books are densely written and contain far more material than residents need to know. Moreover, the number, variety, and quality of images is often limited. *What Radiology Residents Need to Know: Chest Radiology* answers these needs by presenting the important information in bullet fashion, divided into convenient sub-units, such as "clinical information," "imaging findings," and "management." In most cases, an individual pathological condition can be presented in one page or less. This book covers such topics as volume loss, pneumonia, pulmonary edema, inhalation diseases, and pulmonary, mediastinal, and pleural tumor imaging. In addition, it contains tips on approaching and interpreting chest radiographs and CT based on decades of practical experience and teaching residents at the work station. With liberal use of illustrations in the text and an online bank of many more high-quality images, this book gives readers a comprehensive library of chest imaging scans and serves as an ideal guide for radiology residents.

Chest Wall Deformities and Corrective Procedures Shyam Kolvekar, Hans Pilegaard, 2015-12-11 This book discusses predominantly pectus excavatum and pectus carinatum, its variation and the treatment modalities available, including minimally invasive surgery. This will help to increase awareness of the available treatment options to doctors and healthcare workers but will also help trainee cardiac and thoracic surgeons. It is also an essential reference book for those already practicing. Chest wall deformities are a common occurrence, the commonest being pectus excavatum and pectus carinatum. The treatment for these is provided by very few centers and there is a decline in expertise especially in the UK due to rationing. When patients approach their GP they are mostly turned away and asked to live with it due to a lack of awareness and treatment modalities. The Editors have extensive experience in this field and will invite authors from other specialties, i.e. chest physicians, cardiologist, pediatric surgeons, anesthesiologists, pain management team, plastic surgeons and prosthetic departments, to contribute their views and solutions to the book.
