Organised into three major areas of the digital economy within China, this ground-breaking book explores the surge in e-commerce of consumer goods, the way in which multi-screen and mobile Internet use has increased in popularity, and the cultural emphasis on the mobile Internet as a source of lifestyle- and entertainment-based content. China's Mobile Communication - Where to GO ,

Mobile Communication and Greater China Wai-chi Rodney Chu, 2012 This edited volume examines mobile phone use in China. Unlike most studies on ICT development in China this book argues for the importance of the cultural realm as captured in mobile phone usage in reflecting the normative basis and struggle of the people. It stresses how the mobile phone is in fact an important means by which one can understand a rapidly changing China. A key concern of the book is to assert the uniqueness of China's experience in mobile phone usage. This uniqueness is encapsulated by the phrase 'riding the double juggernaut', in that Chinese society is exposed to a rapid process of industrialization and cyberization in a short period of time. The contributors maintain that such density of experience under a compressed period when the society has a thick cultural heritage of its own and yet is still under a dictating rule all come together to provide a unique situation in China. .

Technomobility in China Cara Wallis, 2015-03-06 Winner of the 2014 Bonnie

Ritter Book Award Winner of the 2013 James W. Carey Media Research Award As unprecedented waves of young, rural women journey to cities in China, not only to work, but also to “see the world” and gain some autonomy, they regularly face significant institutional obstacles as well as deep-seated anti-rural prejudices. Based on immersive fieldwork, Cara Wallis provides an intimate portrait of the social, cultural, and economic implications of mobile communication for a group of young women engaged in unskilled service work in Beijing, where they live and work for indefinite periods of time. While simultaneously situating her work within the fields of feminist studies, technology studies, and communication theory, Wallis explores the way in which the cell phone has been integrated into the transforming social structures and practices of contemporary China, and the ways in which mobile technology enables rural young women—a population that has been traditionally marginalized and deemed as “backward” and “other”—to participate in and create culture, allowing them to perform a modern, rural-urban identity. In this theoretically rich and empirically grounded analysis, Wallis provides original insight into the co-construction of technology and subjectivity as well as the multiple forces that shape contemporary China.

China's Evolving Industrial Policies and Economic Restructuring Zheng Yongnian, Sarah Y. Tong, 2014-07-11 In the past three decades, China has successfully transformed itself from an extremely poor economy to the world's second largest economy. The country's phenomenal economic growth has been sustained primarily by its rapid and continuous industrialisation. Currently industry accounts for nearly two-fifth of China's gross domestic product, and since 2009 China has been the world's largest exporter of manufactured products. This book explores the question of how far this industrial growth has been the product of government policies. It discusses how government policies and their priorities have developed and evolved, examines how industrial policies are linked to policies in other areas, such as trade, technology and regional development, and assesses how new policy initiatives are encouraging China's increasing success in new technology-intensive industries. It also demonstrates how China's industrial policies are linked to development of industrial clusters and regions.
