**Super Sneering System** Yong Heng, 2020-06-23 Young Wang Xiaoshan had crossed worlds and obtained the King's Glory System. As long as he had enough points, he could exchange them for all his heroes and skills. Joe: Hope and miracles exist! Li Bai: One poem, one drink, one song, one sword. Wang Zhaojun: Those guys who covet my beauty, they all calmly reflect under the ice plains. A-Ke: I don't know your name, but I know when you're going to die! Ruban: I tested the other person's IQ, so I can't use my full strength. Zhuge Liang: Bow to your heart's content so that you can die. – – The whole army will attack!

*Poems and Stories for Overcoming Idleness*, 2024-05-31 *Poems and Stories for Overcoming Idleness* is the first complete translation in any Western language of P'ahan chip, the earliest Korean work of sihwa (C. shihua; "remarks on poetry") and one of the oldest extant Korean sources. The collection was written and compiled by Yi Illo (1152–1220) during the mid-Koryŏ dynasty (918–1392). P'ahan chip features poetry composed in Literary Chinese (the scriptura franca of the premodern East Asian "Sinographic Sphere") by the author and his friends, which included such literary greats as Im Ch'un (dates unknown) and O Sejae (1133–?). P'ahan chip also contains the work of other writers of diverse backgrounds: Chinese master poets, famous Confucian literati, eminent Buddhist masters, erudite Daoist hermits, Koryŏ kings—as well as long-forgotten lower-level officials, unemployed intellectuals, and rural scholars. The verse compositions are embedded in short narratives by Yi

that provide context for the poems. In accordance with the guidelines of the sihwa-genre, these narratives focus primarily on matters relating to poetry while touching on a wide array of subjects such as Korean history and customs; the court and government institutions; official procedures and festivals; Koryŏ foreign-policy and diplomacy; books and the circulation of knowledge; calligraphy and painting; Confucian, Daoist, and Buddhist thought; the role of women; and scenic spots and famous buildings. The book opens with an extensive introduction by translator Dennis Wuerthner on Yi Illo and P'ahan chip set against the backdrop of literary and historical developments in Korea and sino-centric East Asia and vital issues relating to Koryŏ politics, society, and culture. Wuerthner's comprehensive, thought-provoking study is followed by a copiously annotated translation of this important Korean classic.

**Photodetectors** Bahram Nabet, 2023-02-10 Every bit of information that circulates the internet across the globe is a pulse of light, that at some

point will need to be converted to an electric signal in order to be processed by the electronic circuitry in our data centers, computers, and cell phones. Photodetectors (PD's) perform this conversion with ultra high speed and efficiency, in addition to being ubiquitously present in many other devices ranging from the mundane TV remote controls, to ultra high resolution instrumentation used in Laser Interferometer Gravitational Wave Observatory (LIGO) that reach the edge of the universe and measure gravitational waves. The second edition of Photodetectors fully updates the popular first edition with updated information covering the state-of-the-art in modern photodetectors. The 2nd edition starts with basic metrology of photodetectors and common figures-of-merit to compare various devices. It follows with chapters that discuss single-photon detection with Avalanche Photodiodes; organic photodetectors that can be inkjet printed; and silicon-germanium PDs popular in burgeoning field of Silicon Photonics. Internationally recognized experts contribute chapters on one-dimensional, nanowire, PDs as well as high speed zero-dimensional, quantum dot, versions that increase the spectral span as well as speed and sensitivity of PDs and can be produced on various substrates. Solar-blind PDs that operate in harsh environments such as deep space, or rocket engines, are reviewed and new devices in GaN technology . Novel Plasmonic PDs, as well as devices which employ micro-plasma of confined charge in order to make devices that overcome speed limitation of transfer of electronic charge, are covered in other chapters. Using different, novel

technologies, CMOS compatible devices are described in two chapters, and ultra high speed PDs that use low-temperature-grown GaAs (LT-GaAs) to detect fast THz signals are reviewed in another chapter. Photodetectors used in application areas of Silicon-Photonics and Microwave-Photonics are reviewed in final chapters of this book. All chapters are of a review nature, providing a perspective of the field before concentrating on particular advancements. As such, the book should appeal to a wide audience that ranges from those with general interest in the topic, to practitioners, graduate students and experts who are interested in the state-of-the-art in photodetection. Addresses various photodetector devices from ultra high speed to ultra high sensitivity, capable of operation in harsh environments Considers a range of applications for this important technology, including silicon photonics and photonic integrated circuits Includes discussions of detectors based on reduced dimensional systems such as quantum wells, nanowires, and quantum dots, as well as travelling wave, and plasmonic detectors

**Advances in Lasers and Applications** D.M. Finlayson,B Sinclair,2021-09-28  
Advances in Lasers and Applications opens with tutorial reviews of the underpinning science of diode pumped lasers, optical parametric oscillators, and ultrafast pulse generation. The book proceeds to the more specialized areas of waveguide lasers, ultrafast parametric amplification, visible solid-state lasers, materials, and diode pumps. The final sections present the applications of these sources to medicine, remote sensing and ranging, materials processing, and the widening set of applications for ultrashort pulses.

**Nanophotonics and Plasmonics** Dr. Ching Eng (Jason) Png,Dr. Yuriy Akimov,2017-08-21 This book provides a first integrated view of nanophotonics and plasmonics, covering the use of dielectric, semiconductor, and metal nanostructures to manipulate light at the nanometer scale. The presentation highlights similarities and advantages, and shows the common underlying physics, targets, and methodologies used for different materials (optically

transparent materials for nanophotonics, vs opaque materials for plasmonics). Ultimately, the goal is to provide a basis for developing a unified platform for both fields. In addition to the fundamentals and detailed theoretical background, the book showcases the main device applications. Ching Eng (Jason) Png is Director of the Electronics and Photonics Department at the Institute of High Performance Computing, Agency for Science Technology and Research, Singapore. Yuriy A. Akimov is a scientist in the Electronics and Photonics Department at the Institute of High Performance Computing, Agency for Science Technology and Research, Singapore.

The Giant Vesicle Book Rumiana Dimova, Carlos Marques, 2019-11-19 Giant vesicles are widely used as a model membrane system, both for basic biological systems and for their promising applications in the development of smart materials and cell mimetics, as well as in driving new technologies in synthetic biology and for the cosmetics and pharmaceutical industry. The reader is guided to use giant vesicles, from the formation of simple membrane platforms to advanced membrane and cell system models. It also includes fundamentals for understanding lipid or polymer membrane structure, properties and behavior. Every chapter includes ideas for further applications and discussions on the implications of the observed phenomena towards understanding membrane-related processes. The Giant Vesicle Book is meant to be a road companion, a trusted guide for those making their first steps in this field as well as a source of information required by experts.

Key Features • A complete summary of the field, covering fundamental concepts, practical methods, core theory, and the most promising applications • A start-up package of theoretical and experimental information for newcomers in the field • Extensive protocols for establishing the required preparations and assays • Tips and instructions for carefully performing and interpreting measurements with giant vesicles or for observing them, including pitfalls • Approaches developed for investigating giant vesicles as

well as brief overviews of previous studies implementing the described techniques • Handy tables with data and structures for ready reference

**The Lives of Campus Custodians** Peter M. Magolda, 2023-07-03 This unique study uncovers the lives and working conditions of a group of individuals who are usually rendered invisible on college campuses--the custodians who daily clean the offices, residence halls, bathrooms and public spaces. In doing so it also reveals universities' equally invisible practices that frequently contradict their espoused values of inclusion and equity, and their profession that those on the margins are important members of the campus community. This vivid ethnography is the fruit of the year's fieldwork that Peter Magolda's undertook at two universities. His purpose was to shine a light on a subculture that neither decision-makers nor campus community members know very much about, let alone understand the motivations and

aspirations of those who perform this work; and to pose fundamental questions about the moral implications of the corporatization of higher education and its impact on its lowest paid and most vulnerable employees. Working alongside and learning about the lives of over thirty janitorial staff, Peter Magolda becomes privy to acts of courage, resilience, and inspiration, as well as witness to their work ethic, and to instances of intolerance, inequity, and injustices. We learn the stories of remarkable people, and about their daily concerns, their fears and contributions. Peter Magolda raises such questions as: Does the academy still believe wisdom is exclusive to particular professions or classes of people? Are universities really inclusive? Is addressing service workers' concerns part of the mission of higher education? If universities profess to value education, why make it difficult for those on the margins, such as custodians, to "get educated." The book concludes with the research participants' and the author's reflections about ways that colleges can improve the lives of those whose underpaid and unremarked labor is so essential to the smooth running of their campuses. Appendices provide information about the research methodology and methods, as well as a discussion of the influence of corporate managerialism on ethnographic research.
