Transportation Network Companies and Taxis Craig A. Leisy, 2019-05-07 Transportation Network Companies and Taxis: The Case of Seattle is a modern economic case history and thorough analysis of the devastating impact of the transportation network company (TNC) industry (Uber and Lyft) on the taxicab industry in Seattle, Washington, beginning in 2014. The events that transpired and lessons learned are applicable to most large cities in North America, Europe and Australia. As the regulator of the taxicab and TNC industries in Seattle during this period, the author offers a unique insider perspective. The book also provides internal operating statistics on the TNC industry, which are available here for the first time. Despite the spectacular growth of the TNC industry, growth rates have steadily declined and may fall to zero by 2019 or 2020, while the taxicab industry appears to have begun a modest recovery. This book offers a thorough explanation of how and why this decline has happened. It explains the taxicab industry, economic deregulation, competitive market failure, market disruption, price elasticity of demand and other concepts. There is also a wealth of data, computations and analysis for the specialized reader. This book considers the past, present and future of the taxicab and TNC industries in Seattle. It is recommended for both the general reader and industry professionals.

Dual Phase Evolution David G. Green, Jing Liu, Hussein A. Abbass, 2013-11-12 The aim of the book is to lay out the foundations and provide a detailed treatment of the subject. It will focus on two main elements in dual phase evolution: the relationship between dual phase evolution and other phase transition phenomena and the advantages of dual phase evolution in evolutionary computation and complex adaptive systems. The book will provide a coherent picture of dual phase evolution that encompasses these two elements and frameworks, methods and techniques to use this concept for problem solving.

Convert! Ben Hunt, 2011-02-01 Solve your traffic troubles and turn browsers into buyers When web design expert Ben Hunt set out to quantify the difference between an ordinary web site and a great one, he expected to find the key in design simplicity. But when his team more than doubled the conversion rates for a wide range of sites, they identified simple yet powerful solutions involving design, copy, appropriate analysis, classic optimization techniques, and targeted testing. You'll find the fixes easy to implement, and they're all right here. Understand the essentials - your market, your proposition, and your delivery. Create a site that is seen by the right people, provides a compelling experience, and generates the desired action. Learn how to use testing to improve your site's conversion rate. Discover the holistic nature of web site optimization and why multiplicity matters. Examine dozens of simple techniques for building traffic, engaging your audience, and crafting effective calls to action. Combine creativity with analysis for the best possible results. Ben Hunt is Principal Consultant for Scratchmedia Ltd. He operates webdesignfromscratch.com, which provides tutorials and advice to over 120,000 web developers each month. Ben has been designing, coding, and producing web sites for clients worldwide for more than 15 years, and is considered a leader in the web usability industry. Exploring the Relationship Between Media, Libraries, and Archives Chisita, Collence Takaingenhamo, Rusero, Alexander M., 2018-09-21 New forms of digitalization and digital media technologies are positively and negatively disrupting the free flow of information preservation. These new technologies are revolutionizing the way messages are transmitted and breaking the traditional monopolization of information by well-established institutions. Exploring the Relationship Between Media, Libraries, and Archives provides emerging research on new digital trends in information preservation, origination, and sharing. While highlighting the current shift in information sharing from institutional archives to digital platforms, readers will learn how media, librarians, and archivists reinvent their processes to meet the ever-progressing needs of users. This book is an ideal resource for librarians, archivists, information preservers, and media professionals aiming to find a balance among the use of media, new digital technologies, libraries, and archives in preserving and furthering information sharing.

Beyond Constructivism Richard A. Lesh, Helen M. Doerr, 2003-05 This book has two primary goals. On the level of theory development, the book clarifies the nature of an emerging models and modeling perspective about teaching, learning, and problem solving in mathematics and science education. On the level of emphasizing practical problems, it clarifies the nature of some of the most important elementary-but-powerful mathematical or scientific understandings and abilities that Americans are likely to need as foundations for success in the present and future technology-based information age. Beyond Constructivism: Models and Modeling Perspectives on Mathematics Problem Solving, Learning, and Teaching features an innovative Web site housing online appendices for each chapter, designed to supplement the print chapters with digital resources that include example problems, relevant research tools and video clips, as well as transcripts and other samples of students' work: <http://tcct.soe.purdue.edu/booksULandULjournals/modelsULandULmodeling/> This is an essential volume for graduate-level courses in mathematics and science education, cognition and learning, and critical and creative thinking, as well as a valuable resource for researchers and practitioners in these areas.

Genetics, Mass Media and Identity Tudor Parfitt, Yulia Egorova, 2006-04-18 This is the first book to explore the effect of genetic research on the Lemba Judaising community of Southern Africa and the phenomenon of Israelite identity. The science of genetics as relayed by the media is perceived by laymen as being irreproachably objective 'hard science': its disinterested 'scientific' findings appear immensely impressive and may therefore act as a powerful catalyst for change. In this case, an oral tradition cherished by many of the Lemba that they are of Jewish origin appears to be supported by recent DNA testing, which has deeply affected the narrative and religious identity of the group and the way the tribe is perceived in the Western world. International in appeal, this topical text brings together cutting-edge research on the social, cultural and ethical implications of genetics and the study of Judaising movements across the world. This book will be of interest to researchers and students of Jewish history, genetic anthropology, race and ethnicity studies, and religious and cultural studies.

Introduction to Natural Language Processing Jacob Eisenstein,2019-10-01 A survey of computational methods for understanding, generating, and manipulating human language, which offers a synthesis of classical representations and algorithms with contemporary machine learning techniques. This textbook provides a technical perspective on natural language processing—methods for building computer software that understands, generates, and manipulates human language. It emphasizes contemporary data-driven approaches, focusing on techniques from supervised and unsupervised machine learning. The first section establishes a foundation in machine learning by building a set of tools that will be used throughout the book and applying them to word-based textual analysis. The second section introduces structured representations of language, including sequences, trees, and graphs. The third section explores different approaches to the representation and analysis of linguistic meaning, ranging from formal logic to neural word embeddings. The final section offers chapter-length treatments of three transformative applications of natural language processing: information extraction, machine translation, and text generation. End-of-chapter exercises include both paper-and-pencil analysis and software implementation. The text synthesizes and distills a broad and diverse research literature, linking contemporary machine learning techniques with the field's linguistic and computational foundations. It is suitable for use in advanced undergraduate and graduate-level courses and as a reference for software engineers and data scientists. Readers should have a background in computer programming and college-level mathematics. After mastering the material presented, students will have the technical skill to build and analyze novel natural language processing systems and to understand the latest research in the field.
