### **China's Technological Leapfrogging and Economic Catch-up**

Keun Lee,2021-12-14 After the miraculous economic growth known as the Beijing Consensus, China is now facing a slowdown. The attention has moved to the issue of the middle income trap. This book deals with this interesting issue in the context of China. It also

discusses China's limitations and future prospects, especially after the rise of a new cold war between China and the US, namely the question of whether China would fall into another trap called the Thucydides trap, or conflict with the existing hegemon as a rising power. In sum, this book plays around three key terms, namely, the Beijing Consensus, the Middle Income Trap, and the Thucydides trap, and applies a Schumpeterian approach to these concepts. It also conducts a comparative analysis that examines China from an economic catch-up perspective. An economic catch-up starts from learning and imitating a forerunner, but finishing the race successfully requires taking a different path along the road. This act is also known as leapfrogging, which implies a latecomer doing something different from, and often ahead of, a forerunner. Technological leapfrogging may lead to technological catch-up, which means reducing the technological gap, and then finally to economic catch-up in living standards (per capita income) and economic size (GDP: economic power). This linkage from technological leapfrogging and catch-up to economic catch-up corresponds exactly with a similar linkage from the Beijing Consensus to escaping (or not) the middle income and the Thucydides traps. One conclusion from this book is that China's

successful rise as a global industrial power has been due to its strategy of technological leapfrogging, which has enabled China to move beyond the middle income trap and possibly the Thucydides trap, although at a slower speed.

**ONLINE GAMING & ITS IMPACT ON SOCIETY** Hitesh Keserwani & Kapil Arora ,2022-05-02 The history of internet in India The history of internet in India started with launch of internet services by VSNL on 15 August 1995, the 48th anniversary of Indian independence. They were able to add about 10,000 internet users within 6 months. However for the next 10 years internet experience in the country remained less attractive with narrow-band connections having speed less than 56 kbit/s (Dial-Up). In 2004, Government formulated its Broadband policy which defined the

broadband as an always-on internet connection with download speed of 256 kbit/s or above. From 2005 onward the growth of broadband sector in the country attained acceleration, but remained below the growth estimates of government and related agencies due to the resource issues in last-mile access which depended on wired-line technologies predominantly. This bottleneck was removed in 2010 when government auctioned the 3G spectrum followed by an equally high profile auction of 4G spectrum that set the scene for a competitive and invigorated wireless broadband market. Now internet access in India is provided by both public and private companies using a variety of technologies and media including Dial-Up (PSTN), xDSL, Coaxial Cables, Ethernet, FTTH, ISDN, HSDPA (3G), WiFi, WiMAX etc. at a wide range of speeds and costs. The country has the world's third largest Internet users with over 121 million users (of whom 59% who only access the internet via mobile devices) as of December 2011.
