Live on Cydi J. C.,2014-03 My name is Bailey Elizabeth Baker. I've never been the type to believe in love or dream about my own fairytale ending. I never believed in destiny or magic, even as a child. To me, the idea of soul mates is something to be smiled at in movies while dismissed as fantasy in real life. There are those who believe in predetermined fates, that somehow the universe plans where you will end up, and with who, before you're even born. Those who find comfort in the thought that, no matter what they do, their destiny will guide them to where they're meant to be. This, however, is nonsense. There is no such thing as destiny or fate. All there is, is chance.

The Practice of International Health School of Public Health University of California Daniel Perlman Medical Anthropologist, Berkeley, Division of International & Area Studies University of California Ananya Roy Associate Dean, Berkeley, 2008-09-08 Virtually every school of public health teaches a global health course, yet the major textbooks provide little on the actual practice of international health. This new book comprises a series of vivid first person accounts in which physicians, epidemiologists, health workers, and public health professionals from around the world present the critical dilemmas and challenges facing the field. Aimed primarily at medical and public health students and professionals, this book will be a much-needed addition to the existing literature. Related fields, such as development and urban studies, will find this book an engaging introduction to the core issues of international development. International health practitioners, national and local policymakers, foundations officers, and other related professionals will also find it an invaluable compendium. The Practice of International Health is a beautifully conceived and beautifully written book. It offers an inspiring example of what may be accomplished when scholars with field experience break free of rigid disciplinary boundaries in order to examine key problems in international health. This case-based approach is precisely the one that will allow us to build a new field based on broad understandings of these problems and on the solutions that might follow. The need for and vibrant potential of such a focus on practice that resonates in every page of this book signals its profound relevance to students and teachers of public health, and, one hopes, to policy makers and funders. From the Foreword by Paul Farmer

A Culture of Corruption Daniel Jordan Smith, 2010-12-16 E-mails proposing an urgent business relationship help make fraud Nigeria's largest source of foreign revenue after oil. But scams are also a central part of Nigeria's domestic cultural landscape. Corruption is so widespread in Nigeria that its citizens call it simply the Nigerian factor. Willing or unwilling participants in corruption at every turn, Nigerians are deeply ambivalent about it--resigning themselves to it, justifying it, or complaining about it. They are painfully aware of the damage corruption does to their country and see themselves as their own worst enemies, but they have been unable to stop it. A Culture of Corruption is a profound and sympathetic attempt to understand the dilemmas average Nigerians face every day as they try to get ahead--or just survive--in a society riddled with corruption. Drawing on firsthand experience, Daniel Jordan Smith paints a vivid portrait of Nigerian corruption--of nationwide fuel shortages in Africa's oil-producing giant, Internet cafés where the young launch their e-mail scams, checkpoints where drivers must bribe police, bogus organizations that siphon development aid, and houses painted with the fraud-preventive words not for sale. This is a country where 419--the number of an antifraud statute--has become an inescapable part of the culture, and so universal as a metaphor for deception that even a betrayed lover can say, He played me 419. It is impossible to comprehend Nigeria today--from vigilantism and resurgent ethnic nationalism to rising Pentecostalism and accusations of witchcraft and cannibalism--without understanding the role played by corruption and popular reactions to it. Some images inside the book are unavailable due to digital copyright restrictions.

AIDS Doesn't Show Its Face Daniel Jordan Smith, 2014-03-28 AIDS and Africa are indelibly linked in popular consciousness, but despite widespread awareness of the epidemic, much of the story remains hidden beneath a superficial focus on condoms, sex workers, and antiretrovirals. Africa gets lost in this equation, Daniel Jordan Smith argues, transformed into a mere vehicle to explain AIDS, and in AIDS Doesn't Show Its Face, he offers a powerful reversal, using AIDS as a lens through which to view Africa. Drawing on twenty years of fieldwork in Nigeria, Smith tells a story of dramatic social changes, ones implicated in the same inequalities that also factor into local perceptions about AIDS—inequalities of gender, generation, and social class. Nigerians, he shows, view both social inequality and the presence of AIDS in moral terms, as kinds of ethical failure. Mixing ethnographies that describe everyday life with pointed analyses of public health interventions, he demonstrates just how powerful these paired anxieties—medical and social—are, and how the world might better alleviate them through a more sensitive understanding of their relationship.

Metabolic Regulation and Metabolic Engineering for Biofuel and Biochemical Production Kazuyuki Shimizu, 2017-07-12 The global warming problem is becoming critical year by year, causing climate disaster all over the world, where it has been believed that the CO₂ gas emitted from the factories and the burning of fossil fuels may be one of the reasons of global warming. Moreover, the global stock of fossil fuels is limited, and may run out soon within several tens of years. Although wind, geo-thermal, and tide energies have been considered as clean energy sources, those depend on the land or sea locations and subject to the climate change. Biofuel and biochemical production from renewable bio-resources has thus been paid recent attention from environmental protection and energy production points of view, where the current chemical and energy producing plants can be also utilized with slight modification. The so-called 1st generation biofuels have been produced from corn starch and sugarcane in particular in USA and Brazil. However, this causes the problem of the so-called food and energy issues as the production scale increases. The 2nd generation biofuel production from lingo-cellulosic biomass or wastes has thus been paid recent attention. However, it requires energy intensive pretreatment for the degradation of lingo-cellulosic biomass, and the fermentation is slow due to low growth rate, and thus the productivity of biofuels and bio-chemicals is low. The 3rd generation biofuel production from photosynthetic organisms such as cyanobacteria and algae has been also paid attention, because such organisms can grow with only sun light and CO₂ in the air, but the cell growth rate and thus the productivity of the fuels is significantly low. The main part or core of such production processes is the fermentation by micro-organisms. In particular, it is critical to properly understand the cell metabolism followed by the efficient metabolic engineering. The book gives comprehensive explanation of the cell metabolism and the metabolic regulation mechanisms of a variety of micro-organisms. Then the efficient metabolic engineering approaches are explained to properly design the microbial cell factories for the efficient cell growth and biofuel and biochemical production.

Applications of Membrane Computing in Systems and Synthetic Biology Pierluigi Frisco, Marian Gheorghe, Mario J. Pérez-Jiménez, 2013-12-17 Membrane Computing was introduced as a computational paradigm in Natural Computing. The models introduced, called Membrane (or P) Systems, provide a coherent platform to describe and study living cells as computational systems. Membrane Systems have been investigated for their computational aspects and employed to model problems in other fields, like: Computer Science, Linguistics, Biology, Economy, Computer Graphics, Robotics, etc. Their inherent parallelism, heterogeneity and intrinsic versatility allow them to model a broad range of processes and phenomena, being also an efficient means to solve and analyze problems in a novel way. Membrane Computing has been used to model biological systems, becoming with time a thorough modeling paradigm comparable, in its modeling and predicting capabilities, to more established models in this area. This book is the result of the need to collect, in an organic way, different facets of this paradigm. The chapters of this book, together with the web pages accompanying them, present different applications of Membrane Systems to Biology. Deterministic, non-deterministic and stochastic systems paired with different algorithms and methodologies show the full potential of this framework. The book is addressed to researchers interested in applications of discrete biological models and the interplay between Membrane Systems and other approaches to analyze complex systems.

Twine Cydi J.C., 2011-09-27 Considered mature for her age by many, ten year old Leena Mallor is a quiet girl with a relatively normal life. That is, until one stormy night brings with it a strange new friend who turns her world upside down. Now, she must discover the mysteries of nature to learn that the only way for her to save her friend is to save herself.

Practical Optimization Andreas Antoniou,Wu-Sheng Lu,2007-12-14 Practical Optimization: Algorithms and Engineering Applications is a hands-on treatment of the subject of optimization. A comprehensive set of problems and exercises makes the book suitable for use in one or two semesters of a first-year graduate course or an advanced undergraduate course. Each half of the book contains a full semester’s worth of complementary yet stand-alone material. The practical orientation of the topics chosen and a wealth of useful examples also make the book suitable for practitioners in the field.

Advances in Interpretation of Geological Processes Maria Iole Spalla,Anna Maria Marotta,Guido Gosso,2010 Iterative comparison of analytical results and natural observations with predictions of numerical models improves interpretation of geological processes. Further refinements derive from wide-angle comparison of results from various scales of study. In this volume, advances from field, laboratory and modelling approaches to tectonic evolution - from the lithosphere to the rock scale - are compared. Constructive use is made of apparently discrepant or non-consistent results from analytical or methodological approaches in processing field or laboratory data, P-T estimates, absolute or relative age determinations of tectonic events, tectonic unit size in crustal-scale deformation, grain-scale deformation processes, various modelling approaches, and numerical techniques. Advances in geodynamic modelling critically depend on new insights into grain- and subgrain-scale deformation processes. Conversely, quantitative models help to identify which rheological laws and pa-rameters exert the strongest control on multi-scale deformation up to lithosphere and upper mantle scale
