**CAD Data Transfer for Solid Models** E.G. Schlechtendahl, 2013-11-11 Principal authors: U. Kroszynski, B. Palstr9Sm 1.1 The evolution of concepts and specifications for CAD data exchange The CAD/CAM community has witnessed, during the last decade, the appearance of several specifications as well as proposals for standards which either attempt to cover wider areas or to be more reliable and stable than the others. With the rapid evolution of both hardware and software, the capabilities offered by CAD systems and CAD based application systems are far more advanced than they were only ten years ago, even when they are now based on micro-computers or personal computers. The situation with standards, however, is not and cannot be so. In order to be reliable and accepted by a wide community of both vendors and users, a standard has to be stable. This implies a life span of at least a decade. This also implies that the standard has to be general and flexible enough to

accommodate present as well as expected future developments. 1.1.1 IGES The initial development of concepts for CAD data exchange is strongly influenced by the US Integrated Computer Aided Manufacturing (ICAM) programme, that dealt with the development of methods for data exchange. In September 1979, a subgroup was established with participation of the National Bureau of Standards, the General Electric Company, and the Boeing Company. The result of this effort was the Initial Graphics Exchange Specification (IGES) that was published as a NBS report [61] in 1980.

*Easy data transfer to your new HR-Outsourcing-Provider* Heinrich Serwas, 2023-11-13 With extensive experience in payroll outsourcing projects, like ADP Global View and other HR solutions, we've gained valuable insights for management and tools for those involved in such projects. Transferring data to new outsourcing providers often requires structured Excel tables, which they can quickly integrate into their systems. However, legacy systems produce differently structured data, especially with platforms like ADP Global View which aligns with SAP-HR-Infotypes. Even within two SAP-HR systems, disparities arise, necessitating the process of data cleansing, mapping, and transferring. Our tools, including MATCHMAKER and MAPPING-TOOL, streamline this process, providing a structured method to address challenges faced during data transfers from legacy to new systems. It's crucial for the company (the data owner) to supply accurate data to the outsourcing provider. This book is a comprehensive guide for our MATCHMAKER and MAPPING-TOOL

software, designed to bridge gaps with template files, like the ADP Spreadsheet-Loader and its 40+ sheets (SSL-infotypes). Our software aids HR professionals, project managers, and analysts in delivering quality data effortlessly and on schedule. Management recognizes the importance of adhering to project timelines to ensure a successful launch. MATCHMAKER and MAPPING-TOOL, with an Excel-like interface, empower even those with basic Excel knowledge to execute tasks typically reserved for programmers or analysts. Implementing these tools can boost team performance in such projects. This book, while supporting our software users and aiding on-the-job training, also offers guidance to management in such ventures.

**The Politics of Data Transfer** Yuko Suda, 2017-11-22 In this book, Yuko Suda examines the Safe Harbor debate, the passenger name record (PNR) dispute, and the Society for Worldwide Interbank Financial Transactions (SWIFT) affair to understand the transfer of personal data from the European Union (EU) to the United States. She argues that the Safe Harbor, PNR, and SWIFT agreements were made to mitigate the potentially negative effects that may arise from the beyond-the-border reach of EU data protection rules or US counterterrorism regulation. A close examination of these high-profile cases would reveal how beyond-the-border reach of one jurisdiction's regulation might affect another jurisdiction's policy and what responses the affected jurisdiction possibly makes to manage the effects of such extraterritorial regulation. The Politics of Data Transfer adds another dimension to the study

of transatlantic data conflicts by assuming that the cases exemplify not only the politics of data privacy but also the politics of extraterritorial regulation. A welcome and timely collection uncovering the evolution of and prospects for the politics of data privacy in the digitalized and interconnected world.

*Enabling the New Era of Cloud Computing: Data Security, Transfer, and Management* Shen, Yushi, 2013-11-30 Cloud computing is becoming the next revolution in the IT industry; providing central storage for internet data and services that have the potential to bring data transmission performance, security and privacy, data deluge, and inefficient architecture to the next level. *Enabling the New Era of Cloud Computing: Data Security, Transfer, and Management* discusses cloud computing as an emerging technology and its critical role in the IT industry upgrade and economic development in the future. This book is an essential resource for business decision makers, technology investors, architects and engineers, and cloud consumers interested in the cloud computing future.

**Method for High-Efficiency Data Compression and Transmission of Vehicle Measurement Data Through Mobile Internet** Lorenz Georg Görne, 2024-01-30 Lorenz Georg Görne presents a method (ProComp) for optimal usage of the transmission path between the vehicle and the data backend. The compression ratio of vehicle measurement data could be improved from roughly a factor of ten in conventional methods, to up to 27. The method allows vehicle measurement data to be transmitted optimally in terms of data volume via the mobile internet and via traditional transmission routes. Through the ProComp method, real-time data analysis over the mobile internet is feasible, as well as the collection of big data in the field. This enables key features like predictive maintenance, reactive event evaluation (for example crash events) or fast generation of AI training data. Through the usage of standardized interfaces and data formats, ProComp can be adapted to the needs of many industry branches that feature field data collection.

Learn to Copy Graeme Smith, 2020-04-09 Copying is a process of transferring data from one place to another. Collage is essentially an area and shape focus to creating artwork. Usually non-paint materials are used sometimes in

combination with paint. Shape is essentially an area and perimeter focus to creating artwork. Drawing is essentially a linear focus to creating artwork. It is often two-dimensional (use pencil). But it can be three-dimensional too (use wire). Drawing is usually on a flat or two-dimensional surface. This might be one plane of an otherwise three-dimensional material. Surfaces may be a face, place, outside, or top visible side. Textiles are surfaces (cloth, paper, cardboard, plastic, lace, photographs). Drawing tools are used for working on other materials. Usually they are such things as fingers, scissors, spoons, brushes, crayon, charcoal, or knife. A linear focus to creating artwork is often drawing. It is commonly two-dimensional (use pencil) but it can be three-dimensional too (use wire). Lines can be on a flat or two-dimensional surface. **Improving the Performance of Neutral File Data Transfers** Raymond J. Goult, Peter A. Sherar, 2012-12-06 This book is concerned with problems and solutions associated with the exchange of data between different computer aided design, engineering and manufacturing (CAx) systems. After an analysis of the current problems a new strategy consisting of a test methodology, check software and tools for the improvement of the data exchange process are discussed. The particular problems associated with the transfer of curve and

surface data are expanded upon and new methods to overcome them presented. With all these tools a system-specific adaption of neutral files is made possible. Thus the integration of several incompatible CAX systems within development and production processes can be effectively improved. In order to exclude incorrect data a new methodology for neutral file processor tests has been worked out. Finally, the benefits resulting from this new strategy are shown by the example of data transfer not only between CAX systems but also between consecutive production processes.

*IBM Sterling Managed File Transfer Integration with WebSphere Connectivity for a Multi-Enterprise Solution* Jennifer Foley, Kentaroh Kido, Stephen Litzkow, Kieran Scott, Derek Tucker, IBM Redbooks, 2011-03-28 This IBM® Redbooks® publication describes how IBM has enhanced its managed file transfer portfolio consisting of MQ File Transfer Edition with the Sterling Business Integration Suite. The Sterling Business Integration Suite consists of Sterling File Gateway and Sterling Connect:Direct. Sterling Commerce, an IBM company, transforms and optimizes your business collaboration network by improving business agility, efficiency, and performance. These managed file transfer components from Sterling Commerce, an IBM company, partnered with MQ File Transfer Edition deliver proven value by protecting privacy and integrity of data in transit with governance, eliminate operations center traffic regarding file transfer exceptions, show a faster time to revenue, and bring a six-sigma level performance to key business processes.

The integration and combination of these products allows for organizations to switch between protocols internally, allowing for diversity across business needs while still positioning the organization to easily move files outside their secured intra-enterprise network through an edge server to the external trading partner regardless of what protocol the external trading partner is using. This book is intended for organizations that find themselves wanting to trade data in a secure, reliable, and auditable way across both intra-enterprise and multi-enterprise protocols.

*Data Protection and Data Transfers Law* Paul Lambert, 2023-02-13 This title brings together the different aspects of the transfer landscape and outlines the separate rules, all in one accessible place. Data transfers (under data protection rules) are one of the most discussed areas of data protection, and are currently undergoing significant change. Data transfers are relied on as an essential function of national and international trade, business, and internet use. It is essential for practitioners to keep abreast of the new data transfer rules and changes for their clients. Following on from Brexit, professionals now have more than one set of transfer rules to comply with, including: - The different data transfer channels - New Adequacy Decision - New Standard Contract rules - New UK Contract rules - Consultation process on future laws - New proposed UK data laws - Data law and data transfer changes - Practical and commercial considerations There are more UK data transfer channels and rules to consider now than at any time previously. The UK data transfer regime is now more complex than the EU data transfer regime, necessitating significant extra diligence by commercial entities. This book is designed to assist UK and international law professionals, in-house data protection professionals and a wide range of other interested readers on the increasingly complex area of data rules. This title is included in Bloomsbury

Professional's Intellectual Property and IT online service.

*Achieving High Throughput for Data Transfer Over ATM Networks* Marjory J. Johnson, Research Institute for Advanced Computer Science (U.S.), 1996  
Abstract: File-transfer rates for ftp are often reported to be relatively slow, compared to the raw bandwidth available in emerging gigabit networks. While a major bottleneck is disk I/O, protocol issues impact performance as well. Ftp was developed and optimized for use over the TCP/IP protocol stack of the Internet. However, TCP has been shown to run inefficiently over ATM. In an effort to maximize network throughput, data-transfer protocols can be developed to run over UDP or directly over IP, rather than over TCP. If error-free transmission is required, techniques for achieving reliable transmission can be included as part of the transfer protocol. However, selected image-processing applications can tolerate a low level of errors in images that are transmitted over a network. In this paper we report on experimental work to develop a high-throughput protocol for unreliable data transfer over ATM networks. We attempt to maximize throughput by keeping the communications pipe full, but still keep packet loss under five percent. We use the Bay Area Gigabit Network Testbed as our experimental platform.

**Design of Reservation Protocols for Multimedia Communication** Luca

Delgrossi, 2012-12-06 The advent of multimedia technology is creating a number of new problems in the fields of computer and communication systems. Perhaps

the most important of these problems in communication, and certainly the most interesting, is that of designing networks to carry multimedia traffic, including digital audio and video, with acceptable quality. The main challenge in integrating the different services needed by the different types of traffic into the same network (an objective that is made worthwhile by its obvious economic advantages) is to satisfy the performance requirements of continuous media applications, as the quality of audio and video streams at the receiver can be guaranteed only if bounds on delay, delay jitters, bandwidth, and reliability are guaranteed by the network. Since such guarantees cannot be provided by traditional packet-switching technology, a number of researchers and research groups during the last several years have tried to meet the challenge by proposing new protocols or modifications of old ones, to make packet-switching networks capable of delivering audio and video with good quality while carrying all sorts of other traffic. The focus of this book is on HeiTS (the Heidelberg Transport System), and its contributions to integrated services network design. The HeiTS architecture is based on using the Internet Stream Protocol Version 2 (ST-II) at the network layer. The Heidelberg researchers were the first to implement ST-II. The author documents this activity in the book and provides thorough coverage of the improvements made to the protocol. The book also includes coverage of HeiTP as used in error handling, error control, congestion control, and the full specification of ST2+, a new version of ST-II. The ideas and techniques

implemented by the Heidelberg group and their coverage in this volume apply to many other approaches to multimedia networking.
