**Interpretive Guidelines to ISO 14001** DNV GL - Business Assurance,2013-01-01 The new edition of ISO 14001, referred to as ISO 14001:2004, was published in November 2004. This international standard specifies requirements for an environmental management system to enable an organization to develop and implement a policy and objectives which take into account legal requirements and information about significant environmental aspects. It is intended to apply to all types and sizes of organizations and to accommodate diverse geographical, cultural and so-cial conditions. The success of the system depends on commitment from all levels and functions of the organization, especially from top management. A system of this kind enables an organization to develop an environmental policy, establish objectives and processes to achieve the policy com-mitments, take action as needed to improve its performance and demonstrate the conformity of the system to the requirements of this international standard. The overall aim of this international standard is to support environmental protection and prevention of pollution in balance with socio-economic needs. It should be noted that many of the requirements can be addressed concurrently or revisited at any time. The second edition of this international standard is focused on clarification of the first edition, and has taken due consideration of the provisions of ISO 9001:2000 to enhance the compatibility of the two standards for the benefit of the user community.This book contains the DNV GL - Business Assurance interpretation of these standards and contains common practices in implementation.

Adhesives in Marine Engineering Jan R Weitzenböck,2012-05-15 As a method of joining with economic, performance-related and environmental advantages over traditional welding in some applications, adhesive bonding of joints in the marine environment is increasingly gaining popularity. Adhesives in marine engineering provides an invaluable overview of the design and use of adhesively-bonded joints in this challenging environment. After an introduction to the use of adhesives in marine and offshore engineering, part one focuses on adhesive solution design and analysis. The process of selecting adhesives for marine environments is explored, followed by chapters discussing the specific design of adhesively-bonded joints for ship applications and wind turbines. Predicting the failure of bonded structural joints in marine engineering is also considered. Part two reviews testing the mechanical, thermal and chemical properties of adhesives for marine environments together with the moisture resistance and durability of adhesives for marine environments. With its distinguished editor and international team of expert contributors, Adhesives in marine engineering is an essential guide for all those involved in the design, production and maintenance of bonded structures in the marine environment, as well as proving a key source for academic researchers in the field. **Analysis of a Rotatable Wind Turbine Tower by means of Aero-Servo-Elastic Load Simulations** Struve, Achim,2021-04-12 This work highlights how the costs and CO2-emissions of land-based wind turbines can be reduced by means of an innovative and material efficient support structure concept. Thereby the yaw system is placed at the tower base, allowing the whole wind turbine tower to be rotated. The potential of a rotatable inclined lattice tower concept was analysed by means of aero-servo-elastic load simulations in the FAST environment. A balance between different cost aspects revealed significant savings.
