Be a Player Pia Nilsson, Lynn Marriott, Susan K. Reed, 2017-06-06 Golf is a beloved yet technical game, so a sound swing and precise technique are essential. Most golfers who want to improve their skills go to the range and work painstakingly on their swings, not realizing it's often their performance state on the course that needs work, not their technique. Simple things such as awareness of your balance, tension, and tempo, as well as the ability to control mental, emotional, and social variables you encounter while playing can quickly take your game to a new performance level. Pia Nilsson and Lynn Marriott, founders of VISION54's ... golf program, are here to help--

Assistive Technology for Blindness and Low Vision Roberto Manduchi, Sri Kurniawan, 2018-09-03 Assistive technology has made it feasible for individuals with a wide range of impairments to engage in many activities, such as education and employment, in ways not previously possible. The key factor is to create consumer-driven technologies that solve the problems by addressing the needs of persons with visual impairments. Assistive Technology for Blindness and Low Vision explores a broad range of technologies that are improving the lives of these individuals. Presenting the current state of the art, this book emphasizes what can be learned from past successful products, as well as what exciting new solutions the future holds. Written by world-class leaders in their field, the chapters cover the physiological bases of vision loss and the fundamentals of orientation, mobility, and information access for blind and low vision individuals. They discuss technology for multiple applications (mobility, wayfinding, information access, education, work, entertainment), including both established technology and cutting-edge research. The book also examines computer and digital media access and the scientific basis for the theory and practice of sensory substitution. This volume provides a holistic view of the elements to consider when designing assistive technology for persons with visual impairment, keeping in mind the need for a user-driven approach to successfully design products that are easy to use, well priced, and fill a specific need. Written for a broad audience, this book provides a comprehensive overview and in-depth descriptions of current technology for designers, engineers, practitioners, rehabilitation professionals, and all readers interested in the challenges and promises of creating successful assistive technology.

Discrimination, Copyright and Equality Paul Harpur, 2017-04-03 While equality laws operate to enable access to information, these laws have limited power over the overriding impact of market forces and copyright laws that focus on restricting access to information. Technology now creates opportunities for everyone in the world, regardless of their abilities or disabilities, to be able to access the written word - yet the print disabled are denied reading equality, and have their access to information limited by laws protecting the mainstream use and consumption of information. The Convention on the Rights of Persons with Disabilities and the World Intellectual Property Organization's Marrakesh Treaty have swept in a new legal paradigm. This book contributes to disability rights scholarship, and builds on ideas of digital equality and rights to access in its analysis of domestic disability anti-discrimination, civil rights, human rights, constitutional rights, copyright and other equality measures that promote and hinder reading equality.

Constraining Football Ben Bartlett, 2021-12-15 This is a book about learning. Learning can often be forgotten or fringe in the pursuit of other fruits. When these fruits are practice books, formal & standardised education and easy to digest, saccharine infused niceties there is a risk that we overlook one of the fundamental human needs; to develop, change, grow and learn to master crafts. The mastery of crafts such as coaching takes time, earnest commitment and many challenging, chastening experiences that leave us feeling a little less than skilful. However we overcome these challenges, they are likely to be enablers that support our learning and growth towards becoming a better coach than we were yesterday. This book is intended to support that exploration; generate and guide your thinking whilst ensuring the gestation of those seeds of thought. We will encourage

and enable a deeper understanding of the people or players in our care and provide some illumination on how to guide our decisions in designing environments that are responsive to both you and your players. There will be no coaching prescriptions, simply because the general nature of a constraints-led approach is at odds with prescription focussed approaches to coaching. A constraints-led approach encourages us to take account of, better understand and integrate what we understand about the player (person), the game of football (task) and the specific conditions on any given day (environment) into every interaction, coaching session, game-day, tournament and any other activity we might engage in within player development. There will, however, be some probing into alternative ways for coaches to eschew the traditional practice book or formal curriculum and scaffold player and coach development towards a unique, bespoke, responsive eco-system that keeps rhythm with the beating heart of our own football club. Taken together, this can support the experiences we are exposed to and build to be unique, individual and reflective of what collectively we have agreed and understand to be important in our world. The characteristics of our context should be coupled to our commitments. The backdrop to the way of thinking expressed in this book has been supported by a generation spent within coaching and development; fortune has favoured the opportunity for me to support in a sustained fashion the development of players who have been top scorers at The World Cup, multiple Premier League winners and coaches who coach and manage across some of Europe's top leagues. However, these perceived successes must be allied to the players within those same development programmes whose opportunity has been curtailed by serious injury and coaches who have fallen foul of some of the vagaries that the industry can perpetuate. As such, no development system is universally successful or unsuccessful and we should be careful, thoughtful and willing to as readily 'research' the graveyard as we do the top table. That mirror may be unpleasant to stare into at times, yet it is an important reflection of our own fallibilities and an important reminder to ensure that whatever outcomes our coaching and development programmes facilitate; supporting them to be as humanly supportive yet challenging as is consciously achievable is a worthy and important goal. The aspiration for this book is that it provides a map of some of the landscape that coaches may wish to explore in developing their own constraints-led approach to development, both for the players in their care and for themselves as a coach. Illuminating this fertile land sufficiently to support discoveries that are purposeful, personal and personable.

The Sports Gene David Epstein,2013-08-01 The New York Times bestseller - with a new afterword about early specialization in youth sports - by the author of *Range: Why Generalists Triumph in a Specialized World*. The debate is as old as physical competition. Are stars like Usain Bolt, Michael Phelps, and Serena Williams genetic freaks put on Earth to dominate their respective sports? Or are they simply normal people who overcame their biological limits through sheer force of will and obsessive training? In this controversial and engaging exploration of athletic success and the so-called 10,000-hour rule, David Epstein tackles the great nature vs. nurture debate and traces how far science has come in solving it. Through on-the-ground reporting from below the equator and above the Arctic Circle, revealing conversations with leading scientists and Olympic champions, and interviews with athletes who have rare genetic mutations or physical traits, Epstein forces us to rethink the very nature of athleticism.
