Visual Basic 6.0 Programming By Examples Sergey
Skudaev,2019-12-24 Visual Basic is one of the easiest to learn
computer programming language. Yes, it is obsolete but all MS Office
products include VBA (Visual Basic for Application) and if you learn
VB you will know VBA! In my tutorial, I used VB 6 to explain step by
step how to create a simple Visual Basic Application and a relatively
complex one (a Patient Management system) that is using a database. A
patient Management application source code is explained in details. You
will learn how to design and create a database in MS Access and how
to create tables and queries. The book includes a sample application
that shows how to use Windows API function. You will learn how to
convert VB program that can be run only in Visual Basic development
environment to a distributable application that can be installed on any
client computer. For illustration, I included more than 100 screenshot
images and links to a video. You will be able to download from my
website complete source code for 7 Visual Basic projects including a
Password Keeper, a Patient Management and a Billing Management
application. Get Your Copy Today

Who Should Read This Book Those who have little or no programming experience or who might be picking up Visual Basic as a second language. Bug Alert Description: Changing the startup form's name in a VB WinForms app does not update the Startup form #4517 Explanation: In the latest Visual Basic update on GitHub, Microsoft accidentally introduced a significant bug that you should be aware of. In the Visual Basic project properties dialog on one of the tabs (Application), is a drop down box for selecting the startup object. This can be either a Main method or a System.Windows.Forms instance (or System.Windows.Window for WPF). When you do a rename on a form (say from the code editor in source or from the solution explorer) currently set as the startup form the rename doesn't cascade to the startup object project property cause the project to enter an invalid state where the user must now manually reset this project property from the now nonexistent Form to the new name. This is a huge annoyance. The fix for the bug (until Microsoft addresses) can be found here: http://www.jamesfo
