Mobile Security Products for Android Philipp
 Kratzer, Christoph Gruber, Andreas Clementi, David
 Lahee, Philippe Rödlach, Peter

Stelzhammer,2014-10-14 We have once again tested security products for smartphones running Google's Android operating system. Our report covers details of the products made by leading manufacturers. Smartphones represent the future of modern communications. In 2013, more than 1 billion smartphones were sold, a further milestone in the advance of these devices¹. A study published by Facebook emphasises the importance of smartphones in our lives; about 80% of users make use of their smartphone within 15 minutes of waking up each day. At the same time, the traditional function of a telephone is becoming less and less important. The high quality of integrated cameras means that the smartphone is increasingly used for photography. As well as with photos, users trust their devices with their most personal communications, such as Facebook, WhatsApp and email. This brings some risks with it, as such usage makes the smartphone interesting for criminals, who attempt to infect the device with malware or steal personal data. There is also the danger brought by phishing attacks. These days, the use of security software on a PC or laptop is seen as essential. However, many smartphone users do not yet have the same sense of responsibility, even though their devices store personal data, private photos, Internet banking information or even company data. As modern smartphones are often expensive to buy, they are also an attractive target for thieves. Top-quality smartphones cost several hundred Euros. As it is not possible to physically prevent them from being stolen, they must be made less attractive to

thieves. Consequently, many of today's security products contain not only malware protection, but also highly developed theft-protection functions, which make the device less attractive to thieves (e.g. by locking the device), and help the owner to find it again.

Ability to forensically acquire Android devices using the techniques outlined in the book Detailed information about Android applications needed for forensics investigations Important information about SQLite, a file based structured data storage relevant for both Android and many other platforms.

Fortress Besieged (New Directions Classic) Qian Zhongshu, 2004-02-17 The greatest Chinese novel of the twentieth century, Fortress Besieged is a classic of world literature, a masterpiece of parodic fiction that plays with Western literary traditions, philosophy, and middle-class Chinese society in the Republican era. Set on the eve of the Sino-Japanese War, our hapless hero Fang Hung-chien (à la Emma Bovary), with no particular goal in life and with a bogus degree from a fake American university in hand, returns home to Shanghai. On the French liner home, he meets two Chinese beauties, Miss Su and Miss Pao. Qian writes, With Miss Pao it wasn't a matter of heart or soul. She hadn't any change of heart, since she didn't have a heart. In a sort of painful comedy, Fang obtains a teaching post at a newly established university where the effete pseudo-intellectuals he encounters in academia become the butt of Qian's merciless satire. Soon Fang is trapped into a marriage of Nabokovian proportions of distress and absurdity. Recalling Fielding's Tom Jones in its farcical litany of misadventures and Flaubert's style indirect libre, Fortress Besieged is its own unique feast of delights.
