**Driver Training for Automated Vehicles** Siobhán E. Merriman, Katherine L. Plant, Kirsten M. A. Revell, Neville A. Stanton, 2024-04-30 Since the introduction of Automated Vehicles (AVs) on roads, there have been a number of high-profile collisions, which have highlighted significant driver challenges. These include challenges associated with drivers' trust in the automation, their knowledge and awareness of the AV's capabilities and limitations and their reduced situation awareness of the road environment and the vehicle. Solutions are needed to overcome these challenges, so that the expected benefits of AVs can be realised. *Driver Training for Automated Vehicles: A Systems Approach* identifies the training requirements for drivers of AVs and takes a systematic approach to design, develop, implement and evaluate a comprehensive training package to address these requirements. This book explores how training can overcome the driver challenges associated with AVs by improving drivers' mental models, trust in automation, decisions and behaviour when activating a Level 4 AV. It presents a systematic approach to the training lifecycle, by first presenting the current state of research into AVs, identifying the challenges and training requirements for drivers of AVs, and then developing and evaluating a training programme to achieve these requirements. This fascinating title highlights the need for drivers to undergo training for AVs, and takes us a step closer to this need. It walks readers through a systematic, four-step process and provides practical guidance to develop and evaluate an effective training programme. The reader will develop a thorough understanding of the current driver challenges with AVs and the methods and systems to mitigate them through current knowledge and research. This book is an ideal read for practitioners, designers and academics with a professional or research interest in AVs. Its appeal extends to those in the fields of automotive design, Systems Engineering, Human Factors and education and training.

Publicidad contagiosa Silvia Sivera, 2016-06-30 El marketing viral se inoculó en el panorama profesional publicitario como una vacuna eficaz económica contra la supuesta inmunidad de las audiencias a los mensajes comerciales. Conseguir que fueran los consumidores quienes transmitieran los anuncios espontáneamente entre sus redes sociales se consideró la panacea en un mercado comunicativo sobresaturado. Sin embargo, la publicidad boca a oreja, basada en recomendaciones, ya conseguía el mismo objetivo desde tiempos ancestrales. Fueron las tecnologías de la información y de la comunicación (TIC) las que posibilitaron el salto exponencial hacia la publicidad viral y, en consecuencia, un cambio de magnitudes sin precedentes: los contenidos comerciales pasaban a ser compartibles a escala planetaria, a la velocidad de un clic. Este libro se centra en detectar las claves creativas comunes que detonaron el contagio de 651 vídeos publicitarios entre los usuarios de las redes sociales digitales. A partir de un constructo analítico formado por drivers creativos, cepas virales y la variable ambigüedad, se propone la fórmula  $V = cc(d+c) + a$ , como base inspiradora para crear publicidad altamente contagiosa.

*Technologies for Wireless Computing* Anantha P. Chandrakasan, Robert W.

Brodersen, 2012-12-06 Research over the last decade has brought about the development of high-performance systems such as powerful workstations, sophisticated computer graphics, and multimedia systems such as real-time video and speech recognition. A significant change in the attitude of users is the desire to have access to this computation at any location without the need to be connected to the wired power source. This has resulted in the explosive growth of research and development in the area of wireless computing over the last five years. *Technologies for Wireless Computing* deals with

several key technologies required for wireless computing. The topics covered include reliable wireless protocols, portable terminal design considerations, video coding, RF circuit design issues and tools, display technology, energy-efficient applications, specific and programmable design techniques, energy efficiency metrics, low-voltage process technology and circuit design considerations, and CAD tools for low-power design at the behavior, logic and physical design level. Technologies for Wireless Computing is an edited volume of original research comprising invited contributions by leading researchers. This research work has also been published as a special issue of the Journal of VLSI Signal Processing Systems (Volume 13, Numbers 2 & 3).

**Impaired-driving Program Assessments: a Summary of Recommendations (1991 to 2003).** Darrell W. Johnson, 2004 The National Highway Traffic Safety Administration (NHTSA) developed an assessment process that gives States an opportunity to conduct a review of their efforts to control impaired driving by an outside team of nationally recognized experts. Each assessment examines a State's overall program and presents recommendations to improve or enhance it. NHTSA reviewed 38 State assessment reports and found 2,982 individual recommendations, including 852 that were identified as priority recommendations by the teams. Most of the recommendations fit into 10 thematic areas: (1) increasing deterrence by prioritizing enforcement efforts and enhancing the arrest, prosecution, and adjudication process; (2) improving public information and education efforts related to prevention and deterrence; (3) remedying problems involving DUI data and records (reporting requirements, offender tracking systems, data linkages, uniform traffic citations); (4) enacting new laws or revising existing laws aimed at increasing the deterrence and/or prevention of DUI; (5) enhancing training for law enforcement, prosecution, and judicial personnel; (6) evaluating programs and activities to combat impaired driving; (7) providing sufficient resources for treatment and rehabilitation; (8) improving inter/intra-governmental coordination and cooperation; (9) providing funding (including self-sufficiency) to provide for adequate resources (personnel, equipment); and (10) developing or increasing task forces and/or community involvement.

**Using Digital Video Analysis to Monitor Driver Behavior at Intersections** Derrick Parkhurst, 2006 Commercially available instruments for road-side data collection take highly limited measurements, require extensive manual input, or are too expensive for widespread use. However, inexpensive computer vision techniques for digital video analysis can be applied to automate the monitoring of driver, vehicle, and pedestrian behaviors. These techniques can measure safety-related variables that cannot be easily measured using existing sensors. The use of these techniques will lead to an improved understanding of the decisions made by drivers at intersections. These automated techniques allow the collection of large amounts of safety-related data in a relatively short amount of time. There is a need to develop an easily deployable system to utilize these new techniques. This project implemented and tested a digital video analysis system for use at intersections. A prototype video recording system was developed for field deployment. A computer interface was implemented and served to simplify and automate the data analysis and the data review process. Driver behavior was measured at urban and rural non-signalized intersections. Recorded digital video was analyzed and used to test the system.

**Driver Behavior and Performance in an Age of Increasingly Instrumented Vehicles**

Oren Musicant,Haneen Farah,David Shinar,Christian Collet,2021-09-29

**The Multisensory Driver** Dr Cristy Ho,Professor Charles Spence,2012-10-01 Driver inattention has been identified as one of the leading causes for car accidents. The problem of distraction while driving is likely to worsen, partly due to increasingly complex in-car technologies. However, intelligent transport systems are being developed to assist drivers and to ensure a safe road environment. One approach to the design of ergonomic automobile systems is to integrate our understanding of the human information processing systems into the design process. This book aims to further the design of ergonomic multisensory interfaces using research from the fast-growing field of cognitive neuroscience. It focuses on two aspects of driver information-processing in particular: multisensory interactions and the spatial distribution of attention in driving. The Multisensory Driver provides interface design guidelines together with a detailed review of current cognitive neuroscience and behavioural research in multisensory human perception, which will help the development of ergonomic interfaces. The discussion on spatial attention is particularly relevant for car interface designers, but it will also appeal to cognitive psychologists interested in spatial attention and the applications of these theoretical research findings. Giving a detailed description of a cohesive series of psychophysical experiments on multisensory warning signals, conducted in both laboratory and simulator settings, this book provides an approach for those in the engineering discipline who wish to test their systems with human observers.

Highway Research Program (SHRP 2) Report S2-L10-RR-1: Feasibility of Using In-Vehicle Video Data to Explore How to Modify Driver Behavior That Causes Nonrecurring Congestion presents findings on the feasibility of using existing in-vehicle data sets, collected in naturalistic driving settings, to make inferences about the relationship between observed driver behavior and nonrecurring congestion.

**Ergonomics and Safety of Intelligent Driver Interfaces** Y. Ian Noy, 2020-11-25

Even to the casual observer of the automotive industry, it is clear that driving in the 21st century will be radically different from driving as we know it today. Significant advances in diverse technologies such as digital maps, communication links, processors, image processing, chipcards, traffic management, and vehicle positioning and tracking, are enabling extensive development of intelligent transport systems (ITS). Proponents of ITS view these technologies as freeing designers to re-define the role and function of transport in society and to address the urgent problems of congestion, pollution, and safety. Critics, on the other hand, worry that ITS may prove too complex, too demanding, and too distracting for users, leading to loss of skill, increased incidence of human error, and greater risk of accidents. The role of human factors is widely acknowledged to be critical to the successful implementation of such technologies. However, too little research is directed toward advancing the science of human-ITS interaction, and too little is published which is useful to system designers. This book is an attempt to fill this critical gap. It focuses on the intelligent driver interface (IDI) because the ergonomics of IDI design will influence safety and usability perhaps more than the technologies which underlie it. The chapters cover a broad range of topics, from cognitive considerations in the design of navigation and route guidance, to issues associated with collision warning systems, to monitoring driver fatigue. The chapters also differ in intent -- some provide design recommendations while others describe research findings or new approaches for IDI research and development. Based in part on papers presented at a symposium on the ergonomics of in-vehicle human systems held under the auspices of the 12th Congress of the International Ergonomics Association, the book provides an international perspective on related topics through inclusion of important contributions from Europe, North America, and Japan. Many of the chapters discuss issues associated with navigation and route guidance because such systems are the most salient and arguably the most complex examples of IDI. However, the findings and research methodologies are relevant to other systems as well, making this book of interest to a wide audience of researchers, design engineers, transportation authorities, and academicians involved with the development or implementation of ITS.

Latino Truck Driver Trade Johnny Madrigal, 2014-02-25 What do truckers do about their sexual needs on the road? This startling and unique study examines the on-the-road sex lives of Central American truck drivers. It takes a quantitative and qualitative look at the extent of homosexuality, prostitution, drug use, and vulnerability to HIV infection among these men who operate in a strangely unique sexual culture. *Latino Truck Driver Trade: Sex and HIV in Central America* documents the extent of their sexual activities with both men and women as well as drug use and prostitution among this population. Honest and revealing, this valuable book uncovers the incredible danger that truck drivers put themselves in by risking HIV infection and why Latin sexual culture does not always define men who participate in acts with other men as "homosexual." *Latino Truck Driver Trade* explores the concept of "machismo" and why truck drivers act very "manly" (to avoid being teased or being made fun of). Through interviews with truck drivers, this detailed account gives insight into how friends pressure others to perform sexual acts, drink alcohol, and take drugs in order to "fit in." *Latino Truck Driver Trade: Sex and HIV in Central America* provides suggestions for HIV prevention programs to decrease the spread of HIV that is prevalent among this group shows how theories of homosexuality fail to account for its widespread practice among Latino heterosexual men explores the sexual practices of these men questions basic assumptions about Latin machismo demonstrates how Latino men can practice homosexuality without acquiring a gay identity shows how this international truck driver culture will impact the U. S. *Latino Truck Driver Trade* explicitly examines the on-the-road lifestyles of Central American truckers, revealing that many times they are completely the opposite of the quiet, "normal" lives these men lead at home.
