Preventing Violent Radicalisation in Europe Patrizia Meringolo, 2020-10-03 This book brings together the latest literature and European experiences on preventing youth violent radicalisation and violent actions in intergroup relations. Youth violent radicalisation is a significant problem within the European context, and requires an exploration of how various social actors can play an active role in preventing radicalisation in minors and young adults. This complex issue needs to be explored through a multidisciplinary approach, and effective operational models are needed in order to tackle it. This book describes the theoretical framework for such an approach in all its facets. The book's originality lies in its psychosocial and participatory approach, aimed at improving results through professional training and community empowerment for building trusting relationships and educational activities. It also proposes "alternative narratives", which are a way of representing people and groups within a social context, thereby overcoming stereotyped visions and stigma. This book focuses on participation and communication among stakeholders, social inclusion, strengthening democratic values, and pursuing a proactive instead of a reactive approach to preventing radicalisation. Highly topical, the book will appeal to researchers and students of the social and behavioural sciences interested in youth radicalisation, including social work and social policy, as well as practitioners working within the juvenile justice system.

Frontiers in Molecular Pharming Muhammad Sarwar Khan, 2021-12-09 The advent of large-scale production and clinical trials of drugs developed through diverse production routes - involving viruses, microbes, plants, and animals - has increased the demand for an expanded capacity for pharmaceutical manufacturing. The production and purification of expressed proteins accounts for the bulk of the manufacturing costs for new therapeutics. Several pharmaceutical proteins have been synthesized by exploiting plant genetics allowing producers to override conventional approaches used to manufacture pharmaceuticals. The process of inserting a gene into a host organism for the purpose of harvesting a bioactive molecule for therapeutic use is known as molecular pharming. Frontiers in Molecular Pharming covers an array of topics relevant to understanding the structure, function, regulation, and mechanisms of action, biochemical significance, and usage of proteins and peptides as biomarkers, therapeutics, and vaccines for animals and humans. The contributions aim to highlight current progress in three areas, including system biology (in vivo characterization of proteins and peptides), molecular pharming for animals and molecular pharming for humans. The book gives special attention to computational biology tools, production platforms and

fields (such as immunoinformatics) and applications of molecular pharming (such as veterinary therapeutics). A balance of theoretical concepts and practical applications is provided through 13 chapters. Frontiers in Molecular Pharming is an invaluable resource for students and researchers of biochemistry, molecular biology, and biotechnology. The book also serves as a springboard for understanding the process of how discoveries in protein and peptide research and its applications are coming to fruition.
