Getting Started on the Internet Irene Krechowiecka,1999 This guide aims to give people the essential skills they need to get maximum benefit from the Internet. Written in jargon-free language, it should be useful for those unfamiliar with the communications revolution that the Internet embodies.

Net Neutrality and the Battle for the Open Internet Danny Kimball,2022-08-24 "Net neutrality," a dry but crucial standard of openness in network access, began as a technical principle informing obscure policy debates but became the flashpoint for an all-out political battle for the future of communications and culture. Net Neutrality and the Battle for the Open Internet is a critical cultural history of net neutrality that reveals how this intentionally "boring" world of internet infrastructure and regulation hides a fascinating and pivotal sphere of power, with lessons for communication and media scholars, activists, and anyone interested in technology and politics. While previous studies and academic discussions of net neutrality have been dominated by legal, economic, and technical perspectives, Net Neutrality and the Battle for the Open Internet offers a humanities-based critical theoretical approach, telling the story of how activists and millions of everyday people, online and in the streets, were able to challenge the power of the phone and cable corporations that historically dominated communications policy-making to advance equality and justice in media and technology.

Information Worlds Paul T. Jaeger,Gary Burnett,2010-04-05 The authors present a multi-level theory of Information Worlds to investigate the ways in which information creates the social worlds of people. Building upon the foundational works of Library and Information Studies (LIS) scholar and theorist Elfreda Chatman and philosopher Jurgen Habermas, as well as from theory and research from a wide range of other fields, the theory of information worlds can serve as a theoretical driver both in LIS studies and across other disciplines that study information issues, enriching and expanding our understanding of the multi-layered role of information in society. Testing their theory through application to a variety of real-world issues, Burnett and Jaeger tackle the topics of libraries and information provision, the value assigned to information by differing social groups, information access and exchange, international information policies, the role of information in democracy, and technological change. Information Worlds provides a framework for empirical investigations into the fascinating and very real social dimensions of information.

The Internet Trap Matthew Hindman,2020-11-10 Why there is no such thing as a free audience in today's attention economy The internet was supposed to fragment audiences and make media monopolies impossible. Instead, behemoths like Google and Facebook now dominate the time we spend online—and grab all the profits. This provocative and timely book sheds light on the stunning rise of the digital giants and the online struggles of nearly everyone else, and reveals what small players can do to survive in a game that is rigged against them. Challenging some of the most enduring myths of digital life, Matthew Hindman explains why net neutrality alone is no guarantee of an open internet, and demonstrates what it really takes to grow a digital audience in today's competitive online economy.

The Internet Playground Ellen Seiter,2005 Based on four years of experience teaching computers to 8-12 year olds, media scholar Ellen Seiter offers parents and educators practical advice on what children need to know about the Internet and when they need to know it. The Internet Playground argues that, contrary to the promises of technology boosters, teaching with computers is very difficult. Seiter points out that the Internet today resembles a mall more than it does a library. While children love to play online games, join fan communities, and use online chat and instant messaging, the Internet is also an appallingly aggressive marketer to children and, as this book passionately argues, an educational boondoggle.

Field Guide to the Internet Stephen L. Nelson,1997

The Wired Homestead Joseph Turow,Andrea L. Kavanaugh,2003-06-06 Multidisciplinary essays on the effects of the internet on family life, in particular parental oversight of children's use of the World Wide Web. The use of the internet in homes rivals the advent of the telephone, radio, or television in social significance. Daily use of the World Wide Web and e-mail is taken for granted in many families, and the computer-linked internet is

becoming an integral part of the physical and audiovisual environment. The internet's features of personalization, interactivity, and information abundance raise profound new issues for parents and children. Most researchers studying the impact of the internet on families begin with the assumption that the family is the central influence in preparing a child to live in society and that home is where that influence takes place. In The Wired Homestead, communication theorists and social scientists offer recent findings on the effects of the internet on the lives of the family unit and its members. The book examines historical precedents of parental concern over new media such as television. It then looks at specific issues surrounding parental oversight of internet use, such as rules about revealing personal information, time limits, and web site restrictions. It looks at the effects of the web on both domestic life and entire neighborhoods. The wealth of information offered and the formulation of emerging issues regarding parents and children lay the foundation for further research in this developing field. Contributors Robert Kraut, Jorge Reina Schement, Ellen Seiter, Sherry Turkle, Ellen Wartella, and Barry Wellman

Cellular Convergence and the Death of Privacy Stephen B. Stephen Wicker addresses the impact of cellular convergence on privacy from technical, legal, and social perspectives.

Technical, Business, and Legal Dimensions of Protecting Children from Pornography on the Internet Institute of Medicine,National Research Council,Division of Behavioral and Social Sciences and Education,Board on Children, Youth, and Families,Division on Engineering and Physical Sciences,Computer Science and Telecommunications Board,Committee to Study Tools and Strategies for Protecting Kids from Pornography and Their Applicability to Other Inappropriate Internet Content,2002-04-29 In response to a mandate from Congress in conjunction with the Protection of Children from Sexual Predators Act of 1998, the Computer Science and Telecommunications Board (CSTB) and the Board on Children, Youth, and Families of the National Research Council (NRC) and the Institute of Medicine established the Committee to Study Tools and Strategies for Protecting Kids from Pornography and Their Applicability to Other Inappropriate Internet Content. To collect input and to disseminate useful information to the nation on this question, the committee held two public workshops. On December 13, 2000, in Washington, D.C., the committee convened a workshop to focus on nontechnical strategies that could be effective in a broad range of settings (e.g., home, school, libraries) in which young people might be online. This workshop brought together researchers, educators, policy makers, and other key stakeholders to consider and discuss these approaches and to identify some of the benefits and limitations of various nontechnical strategies. The December workshop is summarized in Nontechnical Strategies to Reduce Children's Exposure to Inappropriate Material on the Internet: Summary of a Workshop. The second workshop was held on March 7, 2001, in Redwood City, California. This second workshop focused on some of the technical, business, and legal factors that affect how one might choose to protect kids from pornography on the Internet. The present report provides, in the form of edited transcripts, the presentations at that workshop.
