*Electronic Real Estate in Europe* Jan-Philip von Gottberg,2008-12-22 Inhaltsangabe:Introduction: The Internet as a communication medium is integrated in almost every process of today's business. Barely one company can ignore the Internet technology. Hence, it is not astonishing that nowadays the Internet has a great impact on real estate transactions. The question that arises is whether the real estate business is ready for this technology or not. This affects the company side as well as the customer side. Eventually both sides have to be familiar with the technology to accomplish the conclusion of the contract. Although many businesses still work the traditional way, which means the physical trade, the evolution obtains everyone. Still many companies deal their real estate avoiding the Internet. However the reality shows a different picture. More and more people get used to the Internet. Roughly everything is marketable over the Internet, so now people select the Internet likewise for selling or buying online or simply just to get a picture of the market. Hence, the companies have to catch up and adapt to the market change. The idea of integrating the Internet into real estate business has an important background: it is imperative to increase the number of customers. Technologies like Internet help for instance smaller companies to reach customers all around the globe. An opportunity like this was unimaginable a few years ago. In detail it means that a real estate company needs at most premises an own or public server and is able to create a business on an entire virtual platform. Increasing the number of customers and decreasing the costs through saving time and effort has a huge impact on the business development. Although the online real estate industry has not reached an optimum level in Europe, several countries are pushing the development forward. Despite all this the process starts slowly. The change from a face-to-face business to a virtual commerce causes different dilemmas. Beside technical issues the whole selling and buying process has to be overworked and this costs vastly money and time. The change of business is influenced by economic resources, technological progress and meeting the customer's expectations. Germany and the United Kingdom both show very active real estate markets. Given a comparative, high and dense population, the total volume of real estate transactions is fairly high. Additionally the residential properties are interesting for both sides and hence the trade among each other is [...]

**Twenty-First Century Estate Agency** Graham Norwood,2013-10-11 This book is a must have for those estate agents who want to work more effectively in order to grow their business and profits. With 12,000 separately owned estate agencies in the UK this book illustrates how new technology and working practices can revolutionise the industry. Technology can help to improve the competitiveness and sometimes-tarnished image of estate agents in the eyes of the general public. The book contains case studies from international markets and shows how competitive the industry is and how each competitor needs to adopt new approaches to outwit rivals – and to reassure an increasingly sceptical public that agents are worth using, add value and earn their commission.

**The Routledge Companion to International Housing Markets** Magnus Andersson,Peter Palm,Helena Bohman,Béatrice Balivet,Omokolade Akinsomi,2022-06-22 There is a lack of international comparative housing studies, possibly because it requires thorough knowledge of the real estate market in question. This book brings together scholars with knowledge of different national markets in order to facilitate comparisons for real estate and housing and urban studies scholars and practitioners. By studying international markets using new data as well as new analysis of existing data, the chapters in this book present insights into the institutional constraints on national housing markets. Specifically, the contributors seek to examine the role of institutional factors and their influence on transaction costs in these markets. Exhibiting a diverse range of geographical, legal, and economic perspectives, the countries are grouped together based on legal institutional similarities, and each group includes an introduction and a conclusion highlighting similarities and differences from the institutional perspective. The book is divided into 3 parts: Part I sets the theoretical context and the reasons for writing a book focusing on national housing markets. Part II presents national markets from the perspective of the transaction process and covers Europe, North and South America, East Asia, the Pacific, and Africa. Part III contains conclusions with a critical discussion on how to compare national housing markets and a reflection on future directions of housing markets in an increasingly competitive international environment. The Routledge Companion to International Housing Markets is essential reading for academics and professionals in housing studies, real estate, economics, and urban studies.

Garden Suburbs of Tomorrow? Martin Crookston, 2013-12-04 Named one of the Top 10 books about council housing - the Guardian online Faced with acute housing shortages, the idea of new garden cities and suburbs is on the UK planning agenda once again, but what of the garden suburbs that already exist? Over the first six decades of the twentieth century, councils across Britain created a new and optimistic form of housing - the cottage estates of 'corporation suburbia'. By the early 1960s these estates provided homes with gardens for some 3 million mainly working-class households. It was a mammoth achievement. But, because of what then happened to council housing over the later years of the century, this is not very often appreciated. In *Garden Suburbs of Tomorrow*, Martin Crookston suggests that making the most of the assets which this housing offers is a positive story - it can be positive for housing policy; for councils and their 'place-making' endeavours; and for the residents of the estates. This is especially important when all housing market and development options are so constrained, and likely to remain so for the next decade or more. Following an examination of what the estates of 'corporation suburbia' are and what they are like, there follow chapters on specific examples from different parts of the country, on how they are affected by the workings of the housing market, and then - not unconnectedly - on how attitudes to this socially-built stock have evolved. Then the final chapters try to draw out the potentials, and to suggest what future we might look for in corporation suburbia in the twenty-first century.
