The Girl Who Could Talk to Computers Maya

Cointreau, 2013-12 The Girls Who Could is a fun, colorful series of true stories about women who have made a difference in the world through inspired action. By giving young girls examples of people who are doing big, amazing things, children grow up with a template of achievement upon which to grow and expand their own dreams and goals. The Girl Who Could Talk to Computers is the first book in The Girls Who Could Series. It tells the story of young Grace Hopper, the inquiring girl who wrote the first computer compiler program which gave birth to the first computer language, COBOL. After “Amazing Grace” helped bring us into the modern computer-age, she dedicated her life to teaching and inspiring young people to dream big. Written for girls and boys, readers ages 4-9.

Fairy Tales for Computers Charles Brittin, 1969 Fairy Tales for Computers, compiled over 30 years ago, is frightenly relevant to these technologically obsessed times. There is a sort of pact between the machine and ourselves, like the terrible contract between the nervous system and the subtle demon of drugs. The more useful the machine seems to us, the more it becomes so; and the more it becomes so, the more incomplete we are, the more incapable of doing without it, said Paul Valery in his book *History and Politics*.
