*Spontaneous Symmetry Breaking, Self-Trapping, and Josephson Oscillations* Boris A. Malomed,2014-07-08 This volume collects a number of contributions on spontaneous symmetry breaking. Current studies in this general field are going ahead at a full speed. The book present review chapters which give an overview on the major break throughs of recent years. It covers a number of different physical settings which are introduced when a nonlinearity is added to the underlying symmetric problems and its strength exceeds a certain critical value. The corresponding loss of symmetry, called spontaneous symmetry breaking, alias self-trapping into asymmetric states is extensively discussed in this book. The book presents both active theoretical studies of spontaneous symmetry breaking effects as well as experimental findings, chiefly for Bose-Einstein-Condensates with the self-repulsive nonlinearity, and also for photorefractive media in optics.

Trap Responses of Flying Insects R. C. Muirhead-Thompson,2012-12-02 Insect trapping is a basic field research tool for many biologists, whether they are studying insect pests, disease vectors or insect ecology for its own sake. Any field entomologist contemplating a new insect trapping program or looking to improve or develop an existing scheme will benefit from this broad review of flying insect traps, in which the author draws on a wide variety of methods used by different research projects from all over the world. Over the years a great many traps have been developed and endlessly modified to suit particular species, habitats, and research requirements. In virtually every case the design of the trap interacts with the specific behavior of the insects involved to bias trap efficiency. In addition, the limited dialogue between workers in different subject disciplines and habitats has caused a shortage of new information available to field entomologists as a whole. Key Features \* Describes and evaluates the main methods of trapping

flying insects \* Brings together results from agricultural/forest/pest studies and those from medical entomology

Sequence Stratigraphy on the Northwest European Margin Norsk petroleumsförening. Conference,1995 Hardbound. Sequence Stratigraphy, presently one of the most rapidly growing areas in geology, is concerned with the documentation and prediction of how sandstones (potential hydrocarbon reservoirs) and shales (potential source rocks) are distributed in time and space within sedimentary basins. The book takes a critical look at some of the sequence stratigraphy concepts, and provides an account of how these have been applied recently in NW Europe (North Sea, mid Norway and E. Greenland, Barents Sea and Svalbard), mainly in connection with the exploration for oil and gas. There is currently no similar book available.

**Eliminate Your Competition** Sean O'Shaughnessey,2018-05-14 Most salespeople lose the deal before they ever get started! It isn't uncommon for the customer to have already made a decision before most salespeople even learn of the opportunity. Most salespeople have to beat the preferred competitor by a significant margin just to be considered equivalent. Don't you wish that you could be the preferred vendor in all of your opportunities? Selling is a difficult career in which to make a living; it is not uncommon to have the commission check denied before the salesperson even gets a chance to win. Analysis of thousands of sales situations has made it phenomenally obvious that most salespeople begin their sales campaign so late in the decision-making process that they are virtually guaranteed to lose the order. To make matters worse, when they do start the campaign early enough, most salespeople do not know how to control the prospect adequately so that they can guarantee their victory. Typical turnover for a sales department is 10-20%. Many companies see turnover that approaches 40-60%! This turnover costs them 50% of their revenue-generating capability. In any organization that exceeds 25% turnover, the loss of trust with the customer can be astounding as the new salesperson tries to rebuild the entire relationship. In any given quarter dozens or hundreds of companies do not make their forecasted numbers and are dramatically punished by Wall Street. This book will provide the management of a company with a framework to teach their salespeople how to attain their quotas with higher profits. It will also allow salespeople to rise to the top of their organization and be the super-achievers who win awards, trips, bonuses, and respect. In this book, I will show you how to eliminate your competition and maximize your commission.
