**Cyber Operations** Mike O'Leary,2019-03-01 Know how to set up, defend, and attack computer networks with this revised and expanded second edition. You will learn to configure your network from the ground up, beginning with developing your own private virtual test environment, then setting up your own DNS server and AD infrastructure. You will continue with more advanced network services, web servers, and database servers and you will end by building your own web applications servers, including WordPress and Joomla!. Systems from 2011 through 2017 are covered, including Windows 7, Windows 8, Windows 10, Windows Server 2012, and Windows Server 2016 as well as a range of Linux distributions, including Ubuntu, CentOS, Mint, and OpenSUSE. Key defensive techniques are integrated throughout and you will develop situational awareness of your network and build a complete defensive infrastructure, including log servers, network firewalls, web application firewalls, and intrusion detection systems. Of course, you cannot truly understand how to defend a network if you do not know how to attack it, so you will attack your test systems in a variety of ways. You will learn about Metasploit, browser attacks, privilege escalation, pass-the-hash attacks, malware, man-in-the-middle attacks, database attacks, and web application attacks. What You'll Learn Construct a testing laboratory to experiment with software and attack techniquesBuild realistic networks that include active directory, file servers, databases, web servers, and web applications such as WordPress and Joomla!Manage networks remotely with tools, including PowerShell, WMI, and WinRMUse offensive tools such as Metasploit, Mimikatz, Veil, Burp Suite, and John the RipperExploit networks starting from malware and initial intrusion to privilege escalation through password cracking and persistence mechanismsDefend networks by developing operational awareness using auditd and Sysmon to analyze logs, and deploying defensive tools such as the Snort intrusion detection system, IPFire firewalls, and ModSecurity web application firewalls Who This Book Is For This study guide is intended for everyone involved in or interested in cybersecurity operations (e.g., cybersecurity professionals, IT professionals, business professionals, and students)

**Crash Course in Technology Planning** Christopher D. Brown,2016-07-18 This easy-to-use primer will empower anyone—even those with no IT background—to face the challenge of adding one or more technologies to library services or maintaining existing technologies. Most of the public libraries in the United States are operating on tight budgets without allocation for IT personnel; in school libraries, the librarian often takes on the lion's share of IT responsibility. This book is an invaluable guide for library staff members who are put in the position of maintaining their own networks and computers with very little training or support. Authored by an assistant library director with years of firsthand experience working as a solo IT manager within public libraries, this guide provides practical information about overcoming the unique challenges of managing IT in a smaller organization, juggling multiple job roles, being limited by a restrictive budget, and working directly with the public. Crash Course in Technology Planning addresses a wide variety of IT topics in the library sphere, providing information in a logical manner and order. It begins with an explanation of triaging existing IT issues, then moves into diagnosing and repairing both individual PCs as well as the library Local Area Network (LAN). The following chapters cover other important topics, such as the best way to inventory computers and equipment, how to budget for and procure new equipment, and recommended ways for an IT layperson to set and achieve goals.
