Newton C. Braga

Pirate Radio and Video Newton C. Braga, 2001-01-22 Now that the FCC has changed the laws governing pirate radio and video stations, more and more people across the country are starting broadcasts from their homes. Of course transmitting equipment is very expensive, but now you can build your own transmitters for a fraction of the cost of purchasing. By reading about and building the over thirty projects in *Pirate Radio and Video*, you can construct your own station with a minimum investment for maximum learning. With projects for UHF, VHF, AM and FM transmitters, this book covers the gamut of popular bands and outputs. Not only will you learn how to build your own transmitters, but also how to troubleshoot problems, test outcomes and even synthesize several types of equipment into a powerful and unique system. Written with the electronics hobbyist in mind, each project includes basic diagrams, complete instructions as well as advice on how to make each project work best for you. The list of projects includes over several different FM radio transmitters, AM radio transmitters, microwave transmitters, shortwave transmitters, UHF video transmitters, VHF video transmitters as well as nearly a dozen special projects for test equipment and system set-ups. If you are interested in setting up your own radio or television broadcasting system, you will need a copy of this book to do it! Learn how to build your own UHF, VHF, AM and FM transmitters, saving thousands of dollars over buying equipment at a specialty store Start broadcasting your own video or radio signals from your self-built station Experience the fun and learning that radio and video production and broadcasting gives the whole family

Wireless FM Bug Joshua Anquandah, 2016-01-23 This book is for anybody wanting to make a wireless monitoring or surveillance device. It is very detailed research and knowledge to bless anyone who reads it. It is actually a thesis. The wireless FM bug is a sensitive miniature very high FM wireless microphone transmitter of the type Wide Band Frequency Modulation Wireless Microphone (WBFMWM). Basically, it serves as a detective device to secretly monitor conversation and can be used to detect lies. It can be considered as a surveillance device. This is a hardware project which involves RF (radio frequency) circuit design. What makes the FM bug different from other devices is its wireless property. The FM bug receives sound waves preferably human voice through the microphone. The sound wave is converted into electrical energy and then back to audio signal at the output end. In view of that, there are three (3) stages (modules) involved in the implementation of the bug. They are the audio amplifier, FM oscillator and the RF buffer amplifier stages. The sound wave received through the microphone is amplified to a level that can be modulated over RF. The electromagnetic wave that is constantly generated at the FM oscillator stage is buffered with adequate power being supplied to be transmitted strongly through the antenna. Finally, the audio signal is output and retrieved from a broadcast radio FM. Purchase this book to find out more. This is a fantastic book on making a monitoring device.

Build Your Own Low-Power Transmitters Rudolf F. Graf, William Sheets, 2001-08-24 Rudolf Graf and William Sheets have written a book containing twenty low-power (LP) transmitter projects, perfect for the electronics hobbyist and radio experimenter. Now that the FCC has changed its regulations about pirate transmissions, more and more people are setting up radio and video stations for broadcast from their homes. *Build Your Own Low-Power Transmitters* addresses applications for hobbyist broadcasting of AM, SSB, TV, FM Stereo and NBFM VHF-UHF signals with equipment the reader can build himself for thousands of dollars less than similar equipment sold on the retail market. The authors also fully explore the legal limits and ramifications of using the equipment as well as how to get the best performance for optimum range. The key advantage is referencing a low-cost source for all needed parts, including the printed circuit board, as well as the kit. Projects in the book include: LP FM stereo transmitter; digitally synthesized PLL FM stereo transmitter; LP AM transmitter for 150-1710 KHz; radio control transmitter/receiver; carrier current transmitter and AM and FM receivers; LP VHF one-way and two-way audio links; 1-watt 40-meter CW transmitter for ham radio use; SSB LP transmitter for 10-meter ham radio use; 2-meter VHF FM ham radio transmitter; FM video link for 900 MHz NTSC/PAL operation; 2-watt TV transmitters for 440, 900 and 1300 MHz amateur TV NTSC/PAL transmissions; linear amplifier for 440MHz, 10-15watt NTSC/PAL operation;

Downconverters for 440, 900 and 1300 MHz with VHF channel 3 or 4 output; TV video receiving systems and AM-FM IF systems; LP video link for UHF channels 14-18; 1-watt CW beacon transmitter for Part 15 LF radio experimentation; CW identifier for transmitters; test equipment projects for LP transmitters; as well as an RF power meter and modulation monitor. Complete source information will be included to help each reader find the kits and parts they need to build these fascinating projects. Unique among comparable project books, this one offers a low-cost source for all parts, including the printed circuit board. This allows immediate completion without needing to search for difficult to find parts Features twenty low-power transmitter projects

Designing a 4 Watt FM Transmitter Hadi Majzoub, 2015-02-25 In the last decades, the increasing demands on wireless communication systems have required more development and improvement on the way of transmitting data and voice. While many engineers and scientists agree that the classical old technology of transmitting FM radio signals is de-facto standard, new methods are required to increase the flexibility of the communication system, and to make an efficient usage of power. This project identifies the methods of designing a digital-based FM transmitter using microcontrollers to operate in a range of 87-108 MHz with an output power of 4 Watt. The report clarifies the way of using a microcontroller to control the PLL circuit of the FM transmitter, and displays the required locked frequency on LCD. This study points out the ways of using the technology of microcontrollers to build FM system and show results on LCD.

Sounds of Change Christopher H. Sterling, Michael C. Keith, 2008 When it first appeared in the 1930s, FM radio was a technological marvel, providing better sound and nearly eliminating the static that plagued AM stations. It took another forty years, however, for FM's popularity to surpass that of AM. In *Sounds of C*

It presents to you a simplified but valuable insights into transmitting an audio signal or information to a distant radio receiver using an oscillator. It greatly enlightens the reader on radio technology, truly ideal for anyone who wants to understand electromagnetic waves and actually create and interact with one in a complete working 9 Watt FM Radio transmitter project. Suitable for students, enthusiasts, hobbyist and professional as well.
