If you're coming from a Java or .NET environment, you'll be amazed at how quickly large-scale applications can be constructed with XPCom and XUL. Topics in *Programming Firefox* include: An overview of Firefox technology An introduction to the graphical elements that compose a XUL application Firefox development tools and the process used to design and build applications Managing an application with multiple content areas Introduction to Resource Description Files, and how the Firefox interface renders RDF Manipulating XHTML with JavaScript Displaying documents using the Scalable Vector Graphics standard and HTML Canvas The XML Binding Language and interface overlays to extend Firefox Implementing the next-generation forms interface through XForms *Programming Firefox* is ideal for the designer or developer charged with delivering innovative standards-based Internet applications, whether they're web server applications or Internet-enabled desktop applications.
