Guns, Grenades, and Grunts Gerald A. Voorhees, Joshua Call, Katie Whitlock, 2012-11-02 Known for their visibility and tendency to generate controversy, first-person shooter (FPS) games are cultural icons and powder-kegs in American society. Contributors will examine a range of FPS games such as the Doom, Half-Life, System Shock, Deus Ex, Halo, Medal of Honor and Call of Duty franchises. By applying and enriching a broad range of perspectives, this volume will address the cultural relevance and place of the genre in game studies, game theory and the cultures of game players. Guns, Grenades, and Grunts gathers scholars from all disciplines to bring the weight of contemporary social theory and media criticism to bear on the public controversy and intellectual investigation of first-person shooter games. As a genre, FPS games have helped shepherd the game industry from the early days of shareware distribution and underground gaming clans to contemporary multimillion dollar production budgets, Hollywood-style launches, downloadable content and worldwide professional gaming leagues. The FPS has been and will continue to be a staple of the game market.

Use of the AN/FPS-77 for Quantitative Weather Radar Measurements Wilbur H. Paulsen, 1968 A review is made of the assumptions that must be made in using a weather radar set for quantitative measurements of weather echoes. A simplified derivation is provided showing the relationship between the purely meteorological 'radar reflectivity factor' Z and the radar received power for any weather radar set when the assumptions are fulfilled. A nomogram furnished for use with the AN/FPS-77 enables a simple conversion of receiver power to Z values. (Author).

Federal Protective Service United States Government Accountability, United States Government Accountability Office, 2016-10-03 FPS relies on a privately contracted guard force (about 13,500 guards) to provide security to federal facilities under the custody and control of the General Services Administration. In 2010 and 2012, GAO reported that FPS faced challenges overseeing its contract guard program, specifically in ensuring guards' qualifications. GAO was asked to update the status of FPS's contract guard oversight. This report examines (1) how FPS's requirements for contract guards compare to those of selected federal agencies and challenges, if any, that FPS faces in ensuring its requirements are met; (2) the extent to which guard companies have documented compliance with FPS's guard requirements; and (3) the management controls FPS uses to ensure compliance with its guard

requirements. GAO reviewed 31 FPS guard contracts, and analyzed guard files from 11 contracts, selected based on geographic diversity; interviewed officials from guard companies, FPS headquarters, and 4 of 11 FPS regions; and reviewed the contract guard requirements and processes at six federal agencies, selected for their comparability to FPS.

This is not a step-by-step tutorial. This is also not a guide book kind of overview material. We place our focus on the practical side of 3D FPS game creation - practical tips and techniques one will definitely need when starting out a modern FPS game project. We also tell exactly what can and cannot be done with FPSC/FPSC X10, and the kind of performance drawback that can be foreseen when the platform is not fed with the right inputs.

Flexible Pavement Design System FPS 19W Wenting Liu,Thomas Scullion,2001 FPS 19W is the approved flexible pavement thickness design system used by the Texas Department of Transportation (TxDOT). Project 0-1869 made several enhancements to this system, including: a) transferring the system to the Windows® platform, b) automating the Texas Triaxial system to provide a thickness checking system, c) incorporating stress and strain computational subsystem so that classical fatigue and rutting lives can be estimated for the designed pavement, and d) incorporating an extensive on-line help system. In this project the models within FPS 19W were further calibrated. New approaches were also incorporated for handling designs on pavements with very thick flexible bases.

Full Protection and Security in International Investment Law Sebastián Mantilla Blanco,2019-10-24 This book provides a comprehensive study of the standard of 'full protection and security' (FPS) in international investment law. Ever since the Germany-Pakistan BIT of 1959, almost every investment agreement has included an FPS clause.

FPS claims refer to the most diverse factual settings, from terrorist attacks to measures concerning concession contracts. Still, the FPS standard has received far less scholarly attention than other obligations under international investment law. Filling that gap, this study examines the evolution of FPS from its medieval roots to the modern age, delimits the scope of FPS in customary international law, and analyzes the relationship between FPS and the concept of due diligence in the law of state responsibility. It additionally explores the interpretation and application of FPS clauses, drawing particular attention to the diverse wording used in investment treaties, the role ascribed to custom, and the interplay between FPS and other treaty-based standards. Besides delivering a detailed analysis of the FPS standard, this book also serves as a guide to the relevant sources, providing an overview of numerous legal instruments, examples of state practice, arbitral decisions, and related academic publications about the standard.

Flexible Pavement Design System (FPS) 19 Thomas Scullion, Chester H. Michalak, 1998 FPS 19 is the latest version of the flexible pavement design system developed by the Texas Transportation Institute for TxDOT. This version uses backcalculated elastic moduli of the pavement layer materials in the pavement design process. The MODULUS 5.1 backcalculation procedure generates the input layer moduli. The WESLEA linear elastic computer program, embedded within FPS 19, computes pavement responses. The design equation used is the same as used in FPS 11 and documented in TTI Report 32-11. The main design parameter is the Surface Curvature Index computed at the midpoint of a set of dual tires loaded to 40 Kn (9,000 lbs). FPS 19 is microcomputer-based and compatible with MS-DOS Windows 95 and Windows NT when running under the DOS window. TxDOT is implementing the FPS 19 computer program statewide as part of its new flexible pavement design system.
