Robotics and Cognitive Approaches to Spatial Mapping Margaret E. Jefferies,Wai-Kiang Yeap,2008-01-10 This important work is an attempt to synthesize two areas that need to be treated in tandem. The book brings together the fields of robot spatial mapping and cognitive spatial mapping, which share some common core problems. One would expect some cross-fertilization of research between the two areas to have occurred, yet this has begun only recently. There are now signs that some synthesis is happening, so this work is a timely one for students and engineers in robotics.

Intelligent Robots and Systems V. Graefe,1995-09-27 Of the 300 papers presented during IROS '94, 48 were selected because they are particularly significant and characteristic for the present state of the technology of intelligent robots and systems. This book contains the selected papers in a revised and expanded form. Robotics and intelligent systems constitute a very wide and truly interdisciplinary field. The papers have been grouped into the following categories: – Sensing and Perception – Learning and Planning – Manipulation – Telerobotics and Space Robotics – Multiple Robots – Legged Locomotion – Mobile Robot Systems – Robotics in Medicine Other additional fields covered include; control, navigation and simulation. Since many researchers in robotics are now apparently interested in some combination of learning, mobile robots and robot vision, most of the articles included relate to at least one of these fields.
