Medium Law Daithí Mac Síthigh,2017-09-13 Why should anyone care about the medium of communication today, especially when talking about media law? In today's digital society, many emphasise convergence and seek new regulatory approaches. In Medium Law, however, the 'medium theory' insights of Harold Innis, Marshall McLuhan and the Toronto School of Communication are drawn upon as part of an argument that differences between media, and technological definitions, continue to play a crucial role in the regulation of the media. Indeed, Mac Síthigh argues that the idea of converged, cross-platform, medium-neutral media regulation is unattainable in practice and potentially undesirable in substance. This is demonstrated through the exploration of the regulation of a variety of platforms such as films, games, video-on-demand and premium rate telephone services. Regulatory areas discussed include content regulation, copyright, tax relief for producers and developers, new online services, conflicts between regulatory systems, and freedom of expression. This timely and topical volume will appeal to postgraduate students and postdoctoral researchers interested in fields such as Law, Policy, Regulation, Media Studies, Communications History, and Cultural Studies.

Intangible assets and value capture in global value chains: the smartphone industry World Intellectual Property Organization,Jason Dedrick,Kenneth L. Kraemer,2017 This report uses data on individual smart phones as well as industry data to identify which smartphone firms capture the most value. It finds that Apple captures most of the industry profits, thanks to its high prices, large profit margins and the volume of iPhone sales worldwide. Apple's success is explained as a result of its ability to develop its own intellectual property (IP) and take advantage of IP created by suppliers through a strategy of selling only a few models at high prices compared to competitors.
