Digital Copyright Jessica Litman, Professor Litman's work stands out as well-researched, doctrinally solid, and always piercingly well-written. -JANE GINSBURG, Morton L. Janklow Professor of Literary and Artistic Property, Columbia University Litman's work is distinctive in several respects: in her informed historical perspective on copyright law and its legislative policy; her remarkable ability to translate complicated copyright concepts and their implications into plain English; her willingness to study, understand, and take seriously what ordinary people think copyright law means; and her creativity in formulating alternatives to the copyright quagmire. -PAMELA SAMUELSON, Professor of Law and Information Management; Director of the Berkeley Center for Law & Technology, University of California, Berkeley In 1998, copyright lobbyists succeeded in persuading Congress to enact laws greatly expanding copyright owners' control over individuals' private uses of their works. The efforts to enforce these new rights have resulted in highly publicized legal battles between established media and new upstarts. In this enlightening and well-argued book, law professor Jessica Litman questions whether copyright laws crafted by lawyers and their lobbyists really make sense for the vast majority of us. Should every interaction between ordinary consumers and copyright-protected works be restricted by law? Is it practical to enforce such laws, or expect consumers to obey them? What are the effects

of such laws on the exchange of information in a free society?Litman's critique exposes the 1998 copyright law as an incoherent patchwork. She argues for reforms that reflect common sense and the way people actually behave in their daily digital interactions.This paperback edition includes an afterword that comments on recent developments, such as the end of the Napster story, the rise of peer-to-peer file sharing, the escalation of a full-fledged copyright war, the filing of lawsuits against thousands of individuals, and the June 2005 Supreme Court decision in the Grokster case.Jessica Litman (Ann Arbor, MI) is professor of law at Wayne State University and a widely recognized expert on copyright law.

The Routledge Companion to Digital Journalism Studies Bob Franklin,Scott Eldridge II,2016-11-18 The Routledge Companion to Digital Journalism Studies offers an unprecedented collection of essays addressing the key issues and debates shaping the field of Digital Journalism Studies today. Across the last decade, journalism has undergone many changes, which have driven scholars to reassess its most fundamental questions, and in the face of digital change, to ask again: 'Who is a journalist?' and 'What is journalism?'. This companion explores a developing scholarly agenda committed to understanding digital journalism and brings together the work of key scholars seeking to address key theoretical concerns and solve unique methodological riddles. Compiled of 58 original essays from distinguished academics across the globe, this Companion draws together the work of those

making sense of this fundamental reconceptualization of journalism, and assesses its impacts on journalism's products, its practices, resources, and its relationship with audiences. It also outlines the challenge presented by studying digital journalism and, more importantly, offers a first set of answers. This collection is the very first of its kind to attempt to distinguish this emerging field as a unique area of academic inquiry. Through identifying its core questions and presenting its fundamental debates, this Companion sets the agenda for years to come in defining this new field of study as Digital Journalism Studies, making it an essential point of reference for students and scholars of journalism.

d.quarks - The Path to Digital Business Carsten Hentrich, Michael Pachmajer, 2016-10-18 Particle accelerators for digital transformation Just as quarks are the fundamental particles of matter, digital change in companies is built on certain fundamental particles. We call them d.quarks. They represent the capabilities that companies need in order to design, enable, and deliver digital value creation. The description of each d.quark covers four dimensions: organization, people and skills, processes, and technologies. Carsten Hentrich and Michael Pachmajer have discovered the d.quarks, and this book provides their first extensive description in an integrated model. Using a series of real-life examples, the authors explain how companies should use the d.quarks to go digital. d.quarks help master digital change - in any type of company.

Each of these peoples represents a race option when you create your D&D character, expanding on the choices in the Player's Handbook. Includes

more than 250 monsters—updates to the monsters include making spellcasters easier for Dungeon Masters to run, giving many monsters more damage and resilience, and improving the organization of the stat blocks themselves Includes more than 30 playable races—brings the game's setting-agnostic races into one book, complementing the races in the Player's Handbook A multiverse of lore—includes updates to monster lore that refocuses their stories on the D&D multiverse, rather than on any particular world

Media Freedom Damian Tambini, 2021-08-12 The contentious role of social media in recent elections and referendums has brought to the fore once again the fundamental question of media freedom and the extent to which, and the way in which, the media should be regulated in a modern democratic society. This book surveys the history of media in the US, the UK and Europe in order to develop a new theory of media freedom that is capable of resolving current controversies about how best to regulate the media, including the internet and social media. Tambini argues that democratic regulation of the media must build upon – and learn from – the long history of accommodation between the press, broadcasting, the state and corporate power. By attending to this history, we can see that media freedom is not absolute but rather conditional, taking the form of a social contract of privileges and connected duties. Tambini develops this social contract account of media freedom and applies it to different media sectors, from the press and broadcasting to the internet and social media. Above all, he argues for a renewed role for international human rights law standards in media governance, and an end to American exceptionalism. Written for students, scholars, policymakers and media professionals, this wide-ranging book will be of interest to everyone concerned about the role of the media in our societies and about the health of our democracies.

Taking Literature and Language Learning Online Sandra Stadler-Heer, Amos Paran, 2022-10-20 The use of literary texts in language classrooms is firmly established, but new questions arise with the transfer to remote teaching and learning. How do we teach literature online? How do learners react to being taught literature online? Will new genres emerge from the COVID-19 pandemic? Is the literary canon changing? This volume celebrates the vitality of literary and pedagogic responses to the pandemic and presents research into the phenomena observed in this evolving field. One strand of the book discusses literary outputs stimulated by the pandemic as well as past pandemics. Another strand looks at the pedagogy of engaging learners with literature online, examining learners of different ages and of different proficiency levels and different educational backgrounds, including teacher education. Finally, a third strand looks at the affordances of various technologies for teaching online and the way they interact with literature and with language learning. The contributions in this volume take literature teaching online away from static lecturing strategies, present numerous options for online teaching, and provide research-based grounding for the implementation of these pedagogies.

The Governance of Online Expression in a Networked World Helena Carrapico, Benjamin Farrand, 2017-10-02 In recent years, we have witnessed the mushrooming of pro- democracy and protest movements not only in the Arab world, but also within Europe and the Americas. Such movements have ranged

from popular upheavals, like in Tunisia and Egypt, to the organization of large-scale demonstrations against unpopular policies, as in Spain, Greece and Poland. What connects these different events are not only their democratic aspirations, but also their innovative forms of communication and organization through online means, which are sometimes considered to be outside of the State's control. At the same time, however, it has become more and more apparent that countries are attempting to increase their understanding of, and control over, their citizens' actions in the digital sphere. This involves striving to develop surveillance instruments, control mechanisms and processes engineered to dominate the digital public sphere, which necessitates the assistance and support of private actors such as Internet intermediaries. Examples include the growing use of Internet surveillance technology with which online data traffic is analysed, and the extensive monitoring of social networks. Despite increased media attention, academic debate on the ambivalence of these technologies, mechanisms and techniques remains relatively limited, as is discussion of the involvement of corporate actors. The purpose of this edited volume is to reflect on how Internet-related technologies, mechanisms and techniques may be used as a means to enable expression, but also to restrict speech, manipulate public debate and govern global populaces. This book was published as a special issue of the Journal of Information Technology and Politics.
