Digital @ Scale Anand Swaminathan, Jürgen

Meffert, 2017-06-01 A blueprint for reinventing the core of your business Value in the next phase of the digital era will go to those companies that don't just try digital but also scale it.

Digital@Scale examines what it takes for companies to break through the gravitational pull of their legacy organizations and capture the full value of digital. Digging into more than fifty detailed case studies and years of McKinsey experience and data, the authors, along with a group of expert contributors, show how companies can move beyond incremental change to transform the business where the greatest value is generated—at its core. The authors provide practical insights into the three pillars of digital transformations that successfully scale: reinventing the business model, building out a business architecture from the customer back into the organization, and establishing an 'amoeba' IT and organizational foundation that learns and evolves. This is the ideal guide for all leaders who recognize the power and promise of a digital transformation.

Digital Business Models Sébastien Ronteau, Laurent

Muzellec, Deepak Saxena, Daniel Trabucchi, 2022-12-19 A business model basically describes the way a company makes money. Yet, often we use digital services for free (e.g. Facebook, Google or WhatsApp) or for what seems to be a relatively minor price (e.g. Blablacar, Airbnb, and Amazon). Digital business models are different to traditional business models. Digital Business Models explains the key challenges and characteristics of the various business models that are used by digital businesses. These companies can be a source of inspiration for traditional bricks-and-mortar companies that aim to go digital and/or revamp their traditional business model. Most businesses rely on some form of digital technology for their marketing communication, customer relationship management, supply chain or distribution, yet digital transformation entails a complete reassessment of the way value

is created and captured. *Digital Business Models* details the successful customer acquisition tactics and the development of business ecosystems by digital players. Using the relevant academic and managerial body of knowledge, the authors define the concepts, describe the various ways digital businesses create and capture value and propose some useful tools for managers to analyse a situation, formulate or implement a strategy. Different digital business types are evaluated, such as multisided platforms, digital merchants, subscription-based model, freemium, social media and sharing economy. Each chapter is illustrated with several examples and the appendix comprises four full-length case studies.

Digital Technology and Justice Tania Sourdin, Jacqueline Meredith, Bin Li, 2020-11-24 Justice apps – mobile and web-based programmes that can assist individuals with legal tasks – are being produced, improved, and accessed at an unprecedented rate. These technologies have the potential to reshape the justice system, improve access to justice, and demystify legal institutions. Using artificial intelligence techniques, apps can even facilitate the resolution of common legal disputes. However, these opportunities must be assessed in light of the many challenges associated with app use in the justice sector. These include the digital divide and other accessibility issues; the ethical challenges raised by the dehumanisation of legal processes; and various privacy, security, and confidentiality risks. Surveying the landscape of this emergent industry, this book explores the objectives, opportunities, and challenges presented

by apps across all areas of the justice sector. Detailed consideration is also given to the use of justice apps in specific legal contexts, including the family law and criminal law sectors. The first book to engage with justice apps, this book will appeal to a wide range of legal scholars, students, practitioners, and policy-makers.

Osborn-Harrison, 2016-12-15 Moves beyond traditional definitions of patient-centered care to improve the experience of a real person as patient How might the entire system for producing, delivering, and paying for health care be changed so that real people fare better than they currently do? This text applies person-focused principles to health management decision-making aimed at improving the personal experience of care within health care institutions to improve outcomes and cost savings. Written and edited by distinguished educators and researchers with decades of health care policy experience, the

text examines how health care managers can initiate and direct the process of system transformation by understanding and using a greater person-focus in their decision-making. It encompasses the key domains of management competencies defined by the AUPHA, CAHME, and NCHL. The text brings together experts across a variety of health care management disciplines to examine how managerial decisions affect the personal experience of patient care. It is based on observations that many of the current problems facing health care managers are caused by lack of attention to what happens when real people are transformed into patients and treated routinely by the US health care system. Moving beyond traditional definitions of patient-centered care, the book explores how our entire system for producing, delivering, and paying for care can be changed so that the internal experience of people receiving care is a positive one. The book helps to develop specific rules for improving the experience of care through better managerial decision-making. Case studies with discussion questions facilitate creative problem solving based on sound decision-making. Also included are extensive links to online content along with an Instructor's Manual, PowerPoint slides and more. Key Features: Describes how the person-focused model leads to better outcomes Discusses the impact of management decisions on the personal experience of clinical care Addresses the personal and clinical problems created through our current system's standard health care delivery and financing Applies basic principles of management decision-making to key operational issues to improve the personal experience of care Fulfills key learning competencies defined by AUPHA, CAHME, and NCHL
