Essentials of Fetal Monitoring Michelle L. Murray,Patricia Romo,2006-10-27 As over 85% of pregnant women entering labor and delivery floors undergo fetal monitoring, it is essential that nurses in this field are well-versed in the signs of fetal well-being and compromise obtained from FHR monitoring. Michelle Murray and company have created this workbook to provide a complete guide to fetal monitoring, useful for any nurse currently working in a labor and delivery setting as well those just starting their studies. You will not find a more essential volume on this topic, covering almost all issues you will encounter, including: , Systematic assessment of the pregnant patient External and internal fetal monitoring A step-by-step guide to the different equipment and procedures of fetal monitoring Detailed reproductions of actual fetal monitor tracings NICHD definitions to describe alternative terminology for documentation Skill testing exercises and true/false questions at each chapter end Ways to identify ineffective actions that can delay timely interventions Along with its use as a training guide, *Essentials of Fetal Monitoring* is an excellent reference for use at the bedside and should be a part of any labor and delivery nurse's repertoire. Fetal Heart Rate Monitoring Roger K. Freeman,Thomas J. Garite,Michael P. Nageotte,Lisa A. Miller,2012-09-26 Fetal heart rate monitoring affects the lives of millions of women and infants every year in the United States alone. Used by all members of the obstetric team - nurses, students, midwives, and physicians - it is the primary method to assess fetal oxygenation in both the antepartum and intrapartum setting. Improving outcomes and promoting patient safety depends upon correct use and interpretation of fetal heart rate monitoring, and is crucial to daily obstetric practice. This fourth edition provides the obstetrical team a framework within which to interpret and understand fetal heart rate tracings and their implications. The text covers key issues as the physiological basis for monitoring, a discussion of fetal hypoxemia and neonatal encephalopathy, instrumentation and pattern recognition. In addition to an in-depth review of the standardized NICHD nomenclature and three-tiered FHR Category approach, there are chapters on intrapartum and antepartum management as well as fetal central nervous system effects on monitor patterns. Since fetal monitoring is primarily a screening tool there are also discussions on the use of backup methods for evaluation of abnormal patterns. This 4th edition also brings the addition of Lisa A. Miller CNM, JD, who provides a nursing and midwifery perspective as well an enhanced legal and risk management review. This new fourth edition includes: Review of neonatal encephalopathy and recent studies on CP Current information and discussion of most recent NICHD panel recommendations, both antepartum and intrapartum New chapter on Pitfalls in EFM Detailed chapter on risk management, liability & documentation New section on fetal maternal hemorrhage Update on new instrumentation Crucial information on maternal/fetal coincidence and FDA warnings All chapters include updated practice tips and clinical implications for the entire obstetric team Plus, with this edition clinicians have access to a companion website with full text and an image bank for fast & simplified clinical review.
