A.R. Lester

Merchant Ship Stability A.R. Lester, 2013-10-22 Merchant Ship Stability presents the theory and application of methods for maintaining ship stability. It serves as a textbook for deck officers and first year degree students. The book discusses the methods of Simpson's rules for measuring ship form, the principle of floatation, finding the position of the center of gravity, and the effect of the center of gravity of the vessel not being on the centerline, the effect of having liquids within the vessel which are free to move and the effect of suspending weights. Topics on the assessment of stability of large angles of heel, regulations about merchant vessel stability, and dry docking and grounding are provided as well. Deck officers and merchant marine students will find the book very useful.

Introduction to Marine Cargo Management Mark Rowbotham, 2014-03-21 Cargo management, especially in the maritime sphere, plays a vital role in the transfer of goods between seller and buyer. However, despite over 90% of the world's international trade being conducted by sea, often very little is known about this subject by either party. This unique text provides a clear and comprehensive introduction to the principal elements involved in the management of marine cargo and the carriage of goods by sea. Not only does it analyse key theories and debates in the maritime freight sector, it is equally instructive on practice and logistics. Furthermore, the book provides a thorough guide to the roles and responsibilities of all parties involved in this dynamic industry. This second edition has been fully revised and updated to incorporate the very latest changes in cargo management legislation and procedures, including: Offshore oil & gas supply management The revised INCOTERMS 2010 Tramp shipping and spot cargo trading Project cargo management Dry and liquid bulk cargo management The IMDG Code and the marine carriage of dangerous and hazardous goods Cabotage Salvage Risk management and best practice This is an essential guide for shipping professionals, academics and students of marine logistics, and international trade.

Marine Encyclopaedic Dictionary Eric Sullivan, 2020-11-25 Featuring over 20,000 definitions, this dictionary has been revised to reflect changes and advances in the marine industry. It covers every aspect of the business, including shipbroking, chartering, marine insurance, ship's agency, freight forwarding, oil and gas, and air transport.

Cargo Handling and Stowage Peter Grunau, 2015-12-03 A Guide for Loading, Handling, Stowage, Securing, and Transportation of Different Types of Cargoes, Except Liquid Cargoes and Gas. The most common cargoes and their stowage and calculation are described - Container Cargoes, Reefer Cargoes, Bulk Cargoes including Grain and Grain products, Heavy Lift Cargoes, Timber Cargoes, Steel Cargoes and Ro-Ro Cargoes. For each cargo the stowage and loading principles are described as well as the securing of these cargoes which includes all necessary calculations.

Modern Marine Salvage William I. Milwee, 1996 Authored by a man with extensive experience in salvage operations, this is a comprehensive treatment of ship salvage in all its aspects, but written in plain language. The early chapters introduce the concepts of marine salvage and explain how the parties involved in a salvage operation relate. Ship construction and naval architecture as they pertain to possible later salvage of a ship are

explained, and the types of casualties are described. The fine points of surveys, salvage plans and processes, rigging, restoring buoyancy, lifting, machinery and equipment used in salvage, cargo handling, and the special aspects related to salvage of tankers are discussed in complete detail. Casualty management is also covered. The book's appendices include necessary salvage contracts, sample forms, and checklists for all possible situations.

Marine insurance. (corrected). William Gow,1900

Systems Analysis of Inland Consolidation Centers for Marine Cargo Institute for Applied Technology (U.S.). Technical Analysis Division,Richard H. Jordan,1970 The technical note documents a study to develop analytical techniques for use in optimizing the locations and characteristics of inland centers to facilitate the flow of containerizable marine cargo. Such centers would perform the consolidation of small lots of break-bulk general cargo into container loads for export; for the reverse flow, they would carry out the handling and unloading of import containers for cargo distribution. Performance of these functions inland, rather than exclusively at or near the ports involved, should result in savings to the shipping community from transporting cargo over land in full containers rather than as more costly less-than-carload lots. A mathematical model and associated solution technique have been developed, implemented in a digital computer program to a point compatible with the kinds of information available, and exercised using the body of data and background material accumulated during the fact-finding phases of the study.
