Think Like A Maths Genius Michael Shermer, Arthur Benjamin, 2011-09-01 Did you know that it's easier to add and subtract from left to right, rather than the other way round? And that you can be taught to square a three-digit number in seconds? In *Think Like A Maths Genius*, two mathematicians offer tips and tricks for doing tricky maths the easy way. With their help, you can learn how to perform lightning calculations in your head, discover methods of incredible memorisation and other feats of mental agility. Learn maths secrets for the real world, from adding up your shopping and calculating a restaurant tip, to figuring out gambling odds (or how much you've won) and how to solve sudoku faster.

The Mental Calculator's Handbook Robert Fountain, Jan van Koningsveld, 2013 Written by two of the world's foremost authorities on mental calculation, *The Mental Calculator's Handbook* is essential reading for aspiring calculating prodigies. From multiplying fractions to extracting square roots, all the techniques are presented and explained in a clear and rigorous way.

Mental Math Abhishek VR, 2019-05-19 Discover the Mental Math Secrets to Become a Human Calculator! Schools taught you a way to do math that works when you have a pen & paper. But the same methods, takes a lot of effort when you have to do math in your head. This is because it uses a lot of your working memory (the short term memory used to complete a mental task). For example, try to mentally multiply $73,201 \times 3$. It might take only a few seconds to multiply the individual digits. But if you multiply right to left the way you learnt in school, you will rely on your working memory. You will use it to recall every single digit you calculate to put it back together and get your final answer. You may even find yourself calculating some digits again because you forgot one of the numbers. The difficulty increases further when you have to multiply larger numbers like 732×323 . You will have to remember numbers across many steps. Mental arithmetic would be a lot easier to do in your head if you didn't have to remember so many numbers. In school, you learnt to write the down numbers as you calculate to free up your working memory. In mental math, there are many other ways to do the same thing. One of the tricks to free up your working memory is to calculate from left to right instead of right to left. Try multiplying $73,201 \times 3$ from left to right, starting from 7×3 and ending with 1×3 . You will find yourself calling out the answer before you even finish the whole problem. You can use this trick to solve any math problem in the future. But we have just scratched the surface. There are many more tricks inside the book that make doing mental math as easy as reading a comic. Here is a glimpse of what you will be able to master:

- Mentally add large numbers (Example: Add $8739 + 5492$ in your head in seconds)
- Subtract numbers fast. (Example: Mentally subtract $7520 - 4998$ without writing anything down)
- Multiplication tricks to multiply three-digit numbers. (Example: Multiply 323×123 in your head)
- Square large numbers in seconds (Example: Calculate 64×64 faster than a calculator)
- Mentally divide large numbers (Example: Divide 601324 by 73 entirely in your head)
- Quickly check a calculation with 90% accuracy without re-calculating
- Overcome math anxiety
- Cement your mental math skills with bonus weekly training.

Bloomsbury CPD Library: Supporting Children with Special Educational Needs and Disabilities Cherryl Drabble, Bloomsbury CPD Library, 2016-09-22 According to the most recent SEND Code of

Practice, every teacher is a teacher of children with special educational needs and disabilities, and yet teachers often receive little or no training in this area. Despite their best intentions they are therefore often ill-equipped to rise to the challenge of helping their students achieve the best possible educational outcomes. This comprehensive resource will equip primary and secondary teachers and SENDCos with the training and skills they need to fully support children with SEND in mainstream classrooms. Cheryl Drabble draws on her vast experience as a CPD leader, NQT mentor and her many years of working with SEND to share guidance, practical activities and strategies for evaluating and strengthening your practice and that of your colleagues. The book provides a set of ready-to-use training plans, accompanied by PowerPoint slides available to download online for free, so you can train your colleagues in this essential area and ensure the best support possible for students with SEND across your school. In total, the book offers over 50 hours of CPD, equating to a cost of less than 50p per hour of training!

Professor Stewart's Incredible Numbers Ian Stewart, 2015-04-07 At its heart, mathematics is about numbers, our fundamental tools for understanding the world. In Professor Stewart's Incredible Numbers, Ian Stewart offers a delightful introduction to the numbers that surround us, from the common (Pi and 2) to the uncommon but no less consequential (1.059463 and 43,252,003,274,489,856,000). Along the way, Stewart takes us through prime numbers, cubic equations, the concept of zero, the possible positions on the Rubik's Cube, the role of numbers in human history, and beyond! An unfailingly genial guide, Stewart brings his characteristic wit and erudition to bear on these incredible numbers, offering an engaging primer on the principles and power of math.

Targeting Mental Maths Garda Turner, 2004

Mental Maths Strategies Alan Parker, 2004 Mental Maths is the maths we do in our heads without the use of calculators and without writing down the calculation. Mental Maths strategies are the 'tricks' we use to do Maths in our heads. There are different ways of finding the answer to any Mental Maths problem, and such strategies are the focus of this series. Even though calculators and computers play an enormous role in the modern world, we still need to go back to the basics % we do need to know how to check that the sales assistant at the counter is giving us the right change! Mental Maths has become more important than ever and new primary Maths syllabuses in Australia are reflecting this. For example, NSW has placed an emphasis on Mental Maths in its primary syllabus, and even the Year 10 School Certificate examination has a compulsory non-calculator section. Features of this book include: 32 double-page units of Mentals are included % 8 units for each school term each unit is divided into four sets (A,B,C and D) of 20 questions each each numbered question covers particular Maths topics throughout the book: for example, Question 1 always covers addition, while Question 20 always covers geometry a special 'eHelp' section,, at the front of the book gives different strategies and explanations to help students solve Mentals problems. These are also numbered so they link to the question numbers in each Mental Maths unit a eFun Spot,,

unit, containing fun activities, and a eRevision,, unit are included at the end of each 8 units extra practice,, sections which reinforce particular strategies appear in the lower part of each page. Answers to all questions are in a lift-out section in the centre of the book
