Andrea Giordano,Michele Russo,Roberta Spallone

At the Intersection of Indigenous and Traditional Knowledge and Technology Design Nicola Bidwell,Heike Winschiers-Theophilus,2015 There is intensified interest in designing information and communication technologies (ICTs) that respond to ways of doing, knowing, and saying that differ from those that dominate in producing ICTs and, in particular, to 'traditional' or 'indigenous' knowledges. ICT endeavours for indigenous or traditional knowledges (ITK) vary. Some aim to extend ITK digitally and others use ICTs to improve the economic and/or political situation of marginalised groups. This book presents themes that arise in designing to respond to ITK in different cultural, social, physical, and historical contexts.

Beyond Digital Representation Andrea Giordano,Michele Russo,Roberta Spallone,2023-10-03 This book collects contributions which showcase the impact of new augmented reality (AR) and artificial intelligence (AI) technologies considered jointly in the fields of cultural heritage and innovative design. AR is an alternative path of analysis and communication if applied to several fields of research, in particular if related to space and artifacts in it. This happens because the neural network development strengthens the relationship between augmented reality and artificial intelligence, creating processes close to human thought in shorter times. In the last years, the AR/AI expansion and the future scenarios have raised a deep trans-disciplinary speculation. The disciplines of representation (drawing, surveying, visual communication), as a convergence place of multidisciplinary theoretical and applicative studies related to architecture, city, environment, tangible and intangible cultural heritage, are called to contribute to the international debate. The book chapters deal with augmented reality and artificial intelligence, analyzing their connections as research tools for knowing the environment. In particular, the topics focus on the intersection between real and virtual world and on the heuristic role of drawing in the enhancement and management of cultural heritage, in planning and monitoring the architecture, the environment, or the infrastructures. Scientists involved in AR and AI research applied separately or together in the field of cultural heritage, architectural design, urban planning, and infrastructures analysis, as well as members of public and private organizations make up interdisciplinary groups that fuel the discussion focusing on the priorities and aims of the research related to the disciplines of representation.
