Positive or Negative? The Effect of Emerging Technologies and Products on Mental Health Chao Guo,Stuart Gilmour,Peige Song,Aiping Fang,2023-11-02 Emerging technologies and products such as digital health technology, computing platforms, wearable devices, smartphone sensors and electronic gadgets have the potential to transform and empower society while simultaneously presenting unprecedented challenges in our life. Some like electronic cigarettes (e-cigarettes) are for entertainment, some like online conference platforms are for convenience and some like social media have become a life necessity. However, there is an ongoing debate about whether the use of physical and virtual digital technology products can do harm to mental health. Some evidence-based research shows that frequent use of social media may cause depression and anxiety, and derived behavioral phenomena like cyberbullying and game addiction, which negatively affect people's lives. Other scholars think digital technology products could provide insights into timely, personalized, engaging and accessible intervention, promotion and improvement of mental health. Given the ubiquity of digital devices and their complex and subtle associations with mental health, more research is needed to bring benefits to both research and daily life practices.

**Naturalistic Decision Making and Macro cognition** Laura Militello,Raanan Lipshitz,Jan Maarten Schraagen,2017-09-18 This book presents the latest work in the area of naturalistic decision making (NDM) and its extension into the area of macrocognition. It contains 18 chapters relating research centered on the study of expertise in naturalistic settings, written by international experts in NDM and cognitive systems engineering. The objective of the book is to present the reader with exciting new developments in this field of research, which is characterized by its application-oriented focus. The work addresses only real-world problems and issues. For instance, how do multi-national teams collaborate effectively? How can surgeons best be supported by technology? How do detectives make sense of complex criminal cases? In all instances the studies have been carried out on experts within their respective domains. The traditional field of NDM is extended in this work by focusing on macrocognitive functions other than decision making, namely sense-making, coordination and planning. This has broadened the scope of the field. The book also contains a theoretical discussion of the macro-micro distinction. Naturalistic Decision Making and Macro cognition will be relevant to graduate students, researchers and professionals (including professionals and researchers in business, industry and government) who are interested in decision making, expertise, training methods and system design. The material may be used in two ways: theoretically, to advance understanding of the field of naturalistic decision making; and practically, to gain insight into how experts in various domains solve particular problems, understand and deal with issues and collaborate with others.

*The Integrated Medical Library* Ms. Helis Miido,2020-04-15 First published in 1991, Library automation has advanced at such a rapid pace within the last few years that librarians who have been limited by either budget or hardware constraints are today able to automate at least some library functions. Even though presentations at meetings describing individual efforts have been published in the literature, there has not been a comprehensive text discussing the status of integration at all

levels of library management as it exists today. The Integrated Medical Library addresses this need by presenting the results of a survey of automated systems currently used in medical libraries as a basis on which to discuss various methods for integrating these systems. This includes serials, cataloging, circulation, acquisitions, internal database management systems, external database search procedures, and management and financial control. The book emphasizes current practices and procedures and proposes methods for libraries to improve their performance and services. Part I defines an integrated online library system and describes the study design and analysis of results. Part II describes commercially available integrated online library systems currently used by medical libraries. Part III discusses the specialized integrated online library systems of the U.S. National Library of Medicine and the Swedish Planning and Rationalization Institute for the Health and Social Services. Part IV describes ad hoc integrated functions currently used by medical libraries, while Part V discusses the various means of integration.

*Health Communication and Mass Media* Rukhsana Ahmed, Benjamin R. Bates, 2016-04-22 Health Communication and Mass Media is a much-needed resource for those with a professional or academic interest in the field of health communication. The chapters engage and expand upon significant theories informing efforts at mediated health communication and demonstrate the practical utility of these theories in on-going or completed projects. They consider how to balance the ethical and efficacy demands of mediated health communication efforts, and discuss both traditional media and communication systems and new web-based and mobile media. The book's treatment is broad, reflecting the topical and methodological diversity in the field. It offers an integrated approach to communication theory and application. Readers will be able to appreciate the ways that theory shapes health communication applications and how those applications inform the further construction of theory. They will find practical examples of mediated health communication that can serve as models for their own efforts. While the book serves as an introduction to mediated health communication for students, professionals, and practitioners with limited experience, researchers and advanced practitioners will also appreciate the exemplars and theoretical insights offered by the chapter authors. This book will be of interest to anyone involved in health communication programs or more generally with communication and allied studies, as well as to those in the health professions and their related fields.
