Computational Linguistics and Intelligent Text Processing Alexander Gelbukh, 2005-01-27 CILing 2005 (www.CILing.org) was the 6th Annual Conference on Intelligent Text Processing and Computational Linguistics. It was intended to provide a balanced view of the cutting-edge developments in both the theoretical foundations of computational linguistics and the practice of natural-language text processing with its numerous applications. A feature of CILing conferences is their wide scope that covers nearly all areas of computational linguistics and all aspects of natural language processing applications. This year we were honored by the presence of our keynote speakers Christian Boitet (CLIPS-IMAG, Grenoble), Kevin Knight (ISI), Daniel Marcu (ISI), and Ellen Riloff (University of Utah), who delivered excellent extended lectures and

organized vivid discussions and encouraging tutorials; their invited papers are published in this volume. Of 151 submissions received, 88 were selected for presentation; 53 as full papers and 35 as short papers, by exactly 200 authors from 26 countries: USA (15 papers); Mexico (12); China (9.5); Spain (7.5); South Korea (5.5); Singapore (5); Germany (4.8); Japan (4); UK (3.5); France (3.3); India (3); Italy (3); Czech Republic (2.5); Romania (2.3); Brazil, Canada, Greece, Ireland, Israel, the Netherlands, Norway, Portugal, Sweden, Switzerland (1 each); Hong Kong (0.5); and Russia (0.5) including the invited papers. Learning to Classify Text Using Support Vector Machines Thorsten Joachims, 2012-12-06 Based on ideas from Support Vector Machines (SVMs), Learning To Classify Text Using Support Vector Machines presents a new approach to generating text classifiers from examples. The approach combines high performance and efficiency with theoretical understanding and improved robustness. In particular, it is highly effective without greedy heuristic components. The SVM approach is computationally efficient in training and classification, and it comes with a learning theory that can guide real-world applications. Learning To Classify Text Using Support Vector Machines gives a complete and detailed description of the SVM approach to learning text classifiers, including training algorithms, transductive text classification, efficient performance estimation, and a statistical learning model of text

classification. In addition, it includes an overview of the field of text classification, making it self-contained even for newcomers to the field. This book gives a concise introduction to SVMs for pattern recognition, and it includes a detailed description of how to formulate text-classification tasks for machine learning.

Machine Learning and Artificial Intelligence in Radiation Oncology Barry S. Rosenstein, Tim Rattay, John Kang, 2023-12-02 Machine Learning and Artificial Intelligence in Radiation Oncology: A Guide for Clinicians is designed for the application of practical concepts in machine learning to clinical radiation oncology. It addresses the existing void in a resource to educate practicing clinicians about how machine learning can be used to improve clinical and patient-centered outcomes. This book is divided into three sections: the first addresses fundamental concepts of machine learning and radiation oncology, detailing techniques applied in genomics; the second section discusses translational opportunities, such as in radiogenomics and autosegmentation; and the final section encompasses current clinical applications in clinical decision making, how to integrate AI into workflow, use cases, and cross-collaborations with industry. The book is a valuable resource for oncologists, radiologists and several members of biomedical field who need to learn more about machine learning as a support for radiation oncology. Presents content written by practicing clinicians and research scientists, allowing a healthy mix of both new clinical ideas as well as

perspectives on how to translate research findings into the clinic Provides perspectives from artificial intelligence (AI) industry researchers to discuss novel theoretical approaches and possibilities on academic collaborations Brings diverse points-of-view from an international group of experts to provide more balanced viewpoints on a complex topic

Text Variability Measures in Corpus Design for Setswana Lexicography Thapelo J.

Otlogetswe, 2011-01-18 This book is about the design of a Setswana corpus for lexicography. While various corpora have been compiled and a variety of corpora-based research has been attempted in African languages, no effort has been made towards corpus design. Additionally, although extensive analysis of the Setswana language has been done by missionaries, grammarians and linguists since the 1800s, none of this research is in corpus design. Most research has been largely on the grammatical study of the language. The recent corpora research in African languages in general has been on the use of corpora for the compilation of dictionaries and little of it is in corpus design. Pioneers of this kind of corpora research in African languages are Prinsloo and De Schryver (1999), De Schryver and Prinsloo (2000 and 2001) and Gouws and Prinsloo (2005). Because of a lack of research in corpora design particularly in African languages, this book attempts to fill that gap, especially for Setswana. It is hoped that the finding of this study will inspire similar designs in other languages comparable to Setswana. We explore corpus design by focusing on measuring a

variety of text types for lexical richness at comparable token points. The study explores the question of whether a corpus compiled for lexicography must comprise a variety of texts drawn from different text types or whether the quality of retrieved information for lexicographic purposes from a corpus comprising diverse text varieties could be equally extracted from a corpus with a single text type. This study therefore determines whether linguistic variability is crucial in corpus design for lexicography.

Children's Early Text Construction Clotilde Pontecorvo, Margherita Orsolini, Barbara Burge, Lauren B. Resnick, 2014-02-04 For decades, research on children's literacy has been dominated by questions of how children learn to read. Especially among Anglophone scholars, cognitive and psycholinguistic research on reading has been the only approach to studying written language education. Echoing this, debates on methods of teaching children to read have long dominated the educational scene. This book presents an alternative view. In recent years, writing has emerged as a central aspect of becoming literate. Research in cognitive psychology has shown that writing is a highly complex activity involving a degree of planning unknown in everyday conversational uses of language. At the same time, developmental studies have revealed that when young children are asked to write, they show a surprisingly sophisticated understanding of the representational constraints of alphabetic writing systems. They show this understanding long before they can read conventional writing on their own. The rich structure of meanings involved in the word text provided the glue that brought together a group of scholars from several disciplines in an

international workshop held in Rome. Reflecting the state of the field at the time, the majority of the workshop participants were scholars working in languages other than English, especially the romance languages. Their work mirrors a linguistic and psychological research tradition that Anglophone scholars knew little of until recently. This volume provides English-language readers with updated versions of the papers presented at the meeting. The topics discussed at the workshop are represented in the chapters as follows: * the relationship between acquisition of language and familiarity with written texts; * the reciprocal permeability between spoken and written language; * the initial phases of text construction by children; and * the educational conditions that facilitate written language acquisition and writing practice.

Arabic and Chinese Handwriting Recognition David Doermann, Stefan Jaeger, 2008-03-13 In the fall of 2006, the University of Maryland, along with various government and industrial sponsors, invited leading researchers from all over the world to a two-day Summit on Arabic and Chinese Handwriting Recognition (SACH 2006). The event acted as a complement to the biennial Symposium on Document Image Understanding Technology (SDIUT), providing a focused glimpse into the state of the art in Arabic and Chinese handwriting recognition. It offered a forum for interaction with prominent researchers at the forefront of the scientific community and provided an opportunity for participants to help explore possible directions of the field. This book is a result of the expansion, peer review, and revision of selected papers presented at this meeting. Handwriting recognition remains the Holy Grail of document analysis, and Arabic and Chinese scripts embrace many of the most significant challenges. We are pleased to have 16 scientific papers covering the original topics of handwritten Arabic and Chinese,

as well as 2 papers covering other handwritten scripts. We asked each author to not only describe the techniques used in addressing the problem, but to attempt to identify the key research challenges and problems that the community faces. The result is an impressive collection of manuscripts that provide various detailed views of the state of research. In this book, six articles deal directly with Arabic handwriting. • Cheriet provides an overview of the problems of Arabic recognition and how systems can use natural language processing techniques to correct errors in lexicon-based systems.
