Truly Free Robert Morris,2015-05-12 In Truly Free best-selling author Robert Morris invites us into a glorious truth—that the promise of being set free from the slavery of sin is a promise to be set free completely. Jesus said, “All authority in heaven and on earth has been given to me” (Matthew 28:18). As believers, we have Christ and never need to be afraid. Yet it’s also true that we are not immune to the effects of evil. Christ has conquered sin and death, but in his infinite wisdom—for reasons that are often difficult for us to understand—evil is still permitted to exist. Even if we’re saved and trust in Christ, we may still find areas in which we just can’t get victory. Maybe it’s a sin we’ve confessed again and again or a constant struggle with depression, anger, or lust. These long-imbedded patterns of shameful living continue to entangle us day after day, month after month, and even year after year. Although evil is real and Christians can be oppressed by it, we have the promise that the one who is in us is greater than the one who is in the world (1 John 4:4). Jesus saves us, trains us to resist the power of evil, and delivers us from anything that holds us back. With Jesus, we can be truly free forever.

MMS Daniel Ralph,Paul Graham,2003-11-21 MMS has evolved from the huge popularity of the SMS text service for GSM networks. It is a departure from the transport mechanism used for SMS (which is based on the GSM signalling channels) to the use of IP to transport messages within the MMS network. To this end MMS has similarities with Internet email and standard IETF protocols. As with any new technology it is difficult to accurately predict the position within the next 5 years, although based on previous experience with WAP and SMS it would be fair to say that these protocols will increase in usage over the next 5 years and become legacy for a further 5 years following which, users will migrate onto the next wave of messaging. Significant revenue growth and data usage is expected to be driven by consumer usage of MMS. But MMS technology offers more than just a broadening of message content. With MMS, it is not only possible to send your multimedia messages from one phone to another, but also from phone to email, and vice versa. This feature dramatically increases the possibilities of mobile communication, both for private and corporate use. Multimedia messaging will reshape the landscape of mobile communication, making it more personal, more versatile, and more expressive than ever before. MMS: Is the first book to address how MMS (and the use of IP to transport messages) will affect existing infrastructure and business models Covers the fundamental changes to mail and billing systems Includes future recommendations, such as interoperability and evolution Presents an overview of the MMS technology components Drawing on the authors hands-on experience in the implementation of MMS technology (developing, billing and delivering services) at BT, this innovative book will appeal to engineering managers, network operators, market analysts, business decision makers, content providers and operator organizations.

Astronomy Communication Andre Heck, C. Madsen, 2013-03-14 Astronomy has always been one of the easiest of the sciences to convey to the public. That is partly because it produces spectacular pictures that can be explained (at least in part) and admired, partly because understanding of astronomy usually does not depend upon a knowledge of a complex classification system or esoteric terminology, and partly because its extremes in distances and times challenge our imagination and philosophies. Most scientists enjoy sharing with others the discoveries made by themselves and their colleagues. The primary purpose of scientific research is to discover, to learn, and to understand. When we succeed, we enjoy sharing that understanding. Education is most pleasurable when our audience wishes to learn and we have something important to convey. A field that does not communicate effectively with the public soon loses its interest and support. Author Andre Heck explains the many different ways in which professional communication now occurs while Leslie Sage explains how such communication should be done. Astronomy done with spacecraft and large equipment is very expensive and the funds for those ultimately come from the public. The cost of astronomy prorated over the number of research astronomers is perhaps the highest in all the sciences. If astronomers do not share their results with the public, they will lose its support. However, for most astronomers the desire to share and educate dominates over the pragmatic need to win public support. With the advent of new communication techniques (television, videos, CDs, DVDs, animation, simulations) we have new methods to communicate, in addition to the conventional ones of the printed and spoken word.
