Principles and Practice of Semantic Web Reasoning Hans J.  
Ohlbach, Sebastian Schaffert, 2004-09-21 The best informal  
definition of the Semantic Web is maybe found in the May  
2001 Scientific American article "The Semantic Web" (Berners-  
Lee et al.), which  
says "The Semantic Web is an extension of the current Web in which infor-  
mation is given well-defined meaning, better enabling computers  
and people to work in cooperation. " People who work on the  
Semantic Web quite often base their work on the famous  
"semantic web tower", a product of Tim Berners-Lee's inspiring  
drawing on whiteboards. The lowest level is the level of character  
representation (Unicode) and the identification of resources on  
the Web (URIs). The highest level concerns the problem of  
trusting information on the Web. Somewhere in the middle of the  
tower is the logic level. It addresses the problem of repre-  
senting information on the Web in a way so that inference rules can  
derive implicit information from explicitly stated information. The  
workshop "Principles and Practices of Semantic Web Reasoning"  
(PPSWR 2004) addressed problems on this level. It took place in  
September 2004 as a satellite event of the 20th International

Conference on Logic Programming (ICLP) in St. Malo, France. After PPSWR 2003 in Mumbai, India, it was the second workshop in this series. This book contains the articles presented at the workshop.

**Double Layers And Other Nonlinear Potential Structures In Plasmas - Proceedings Of The Fourth Symposium** Roman Schrittwieser, 1993-09-30 The Fourth Symposium on Double Layers and Other Nonlinear Potential Structures in Plasmas was held in July 1992 in Austria. 86 scientists from all parts of the world attended. The 51 papers that were contributed, in addition to 14 invited lectures, have been compiled in this book. The main topics discussed during the Symposium include experiments, theory, simulation, space and others. The invited speakers concentrated on the various laboratory double layers, theoretical and numerical treatments of double layers and the existence of magnetospheric double layers. The last topic in particular inspired much lively and interesting debate among the participants.

Tools and Algorithms for the Construction and Analysis of Systems Erika Abraham, Klaus Havelund, 2014-03-21 This book constitutes the proceedings of the 20th International Conference on Tools and Algorithms for the Construction and Analysis of Systems, TACAS 2014, which took place in Grenoble, France, in April 2014, as part of the European Joint Conferences on Theory

and Practice of Software, ETAPS 2014. The total of 42 papers included in this volume, consisting of 26 research papers, 3 case study papers, 6 regular tool papers and 7 tool demonstrations papers, were carefully reviewed and selected from 161 submissions. In addition the book contains one invited contribution. The papers are organized in topical sections named: decision procedures and their application in analysis; complexity and termination analysis; modeling and model checking discrete systems; timed and hybrid systems; monitoring, fault detection and identification; competition on software verification; specifying and checking linear time properties; synthesis and learning; quantum and probabilistic systems; as well as tool demonstrations and case studies.

**Inertial Electrostatic Confinement Thruster (IECT)**

Yung-An Chan, 2022-09-19 This work summarizes the state-of-the-art development of inertial electrostatic confinement (IEC) thruster, which can be divided into two parallel lines of development: the IEC plasma source and the corresponding electromagnetic nozzle (EMN). Both developing lines start from the establishment of the theory and modeling and evolve to the

design implementation and experimental verification. The IEC discharge model highlights a novel perspective on the IEC discharge physics and the impacts of the respective critical parameters, which layouts the design for the IEC plasma source. Experimental verification for the theory is demonstrated via the optical emission spectroscopy and collision radiative model. The results provide conclusive evidence of forming a spherical double layer within the IEC plasma source, which is the key to establishing the proposed IEC discharge theory in this work. This work presents a comprehensive study on the magnetohydrodynamic theory for assessing the plasma acceleration in the magnetic nozzle. Nevertheless, the result shows a performance limitation of the magnetic nozzle. An innovative invention is proposed to overcome the limitation known as the EMN. Thorough descriptions of EMN and its working principle are summarized in this work, including its effects on plasma confinement, acceleration, and detachment. Investigation of the plasma plume properties by miscellaneous plasma diagnostics tools further demonstrates EMN functionality and constitutes the first IECT prototype with proof-of-concept in literature.

Advances in Organic Crystal Chemistry Masami

Sakamoto,Hidehiro Uekusa,2020-07-10 This book summarizes and records the recent notable advances in diverse topics in organic crystal chemistry, which has made substantial progress along with the rapid development of a variety of analysis and measurement techniques for solid organic materials. This review book is one of the volumes that are published periodically on this theme. The previous volume, published in 2015, systematically summarized the remarkable progress in assorted topics of organic crystal chemistry using organic solids and

organic-inorganic hybrid materials during the previous 5 years, and it has been widely read. The present volume also shows the progress of organic solid chemistry in the last 5 years, with contributions mainly by invited members of the Division of Organic Crystal Chemistry of the Chemical Society of Japan (CSJ), together with prominent invited authors from countries other than Japan.

**Polymerization of Heterocycles (Ring Opening) S.**

Penczek, 2016-02-03 Polymerization of Heterocycles (Ring Opening) is a collection of papers presented at the International Symposium on Polymerization of Heterocycles (Ring-Opening) held in Warsaw, Poland on June 23-25, 1975. The first paper describes the developments and physical meaning of ion pairs and higher ionic aggregates. Another paper explains the process of obtaining linear polymers, containing rings in the main chain. The book interprets the various behaviors of polymers that can result in high optical yields of stereoelectivity ratios equal to 8. The text then discusses future trends in aldehyde and carbonyl polymerization, including some problem areas pertaining to failures to homopolymerize or copolymerize tetrachloroethylene oxide. Another paper reviews the elemental reactions of selected combinations of copolymerization; the next paper discusses aspects of the mechanism of nucleophilic opening of epoxide rings through studies of certain kinetics. The book then analyzes the ability of lactams to undergo ring-opening polymerization, which mainly depends on the ring size and on the substitution and presence of heteroatoms in the lactam ring itself. The text also discusses the preparation, properties, and applications of the heterochain polymers in medicine or biologically active materials. The book can provide useful information for biochemists, researchers dealing with inorganic and organic compounds, and scientists working in the fields of chemistry such as synthetic chemistry, as well as polymer engineering.

*Nutritional Toxicology* John Hathcock, 2012-12-02 Nutritional

Toxicology, Volume III is a compilation of reviews and research regarding nutrition and toxicology, specifically the issues that affect public health and regulation. This volume further develops understanding of the basic concepts significant to protect and promote public health and provide a credible scientific basis for public health and regulatory decisions. Composed of seven chapters, this volume further extends the discussion of the topics included in Volume I and Volume II of this series. The first two chapters deal with the topic of food safety. The first one discusses safety of food packaging materials and their health implications. The second chapter tackles the relation between neurotoxicology and food safety assessment. The next section of this book includes more detailed discussion regarding proteins (amino acids), phosphorylated derivatives, and vitamin B6 interactions. The discussion of these topics generally covers their chemical aspects, metabolism, bioavailability, and distribution in foods. The last two chapters give recommendations regarding toxicological experiments and vitamin supplement. Chapter 6 presents considerations in the designing of standardized diets in toxicological experiments. Chapter 7 gives an analysis of the risk/benefit of vitamin supplements. As with the other volumes, this book proves helpful to students, professionals, and researchers in the field of nutritional sciences, pharmacology, and biology.
