**Civil Society in Central Asia** M. Holt Ruffin, Daniel Waugh, 2011-05-01 Central Asia, known as the home of Tamerlane and the Silk Road, is a crossroads of great cultures and civilizations. In 1991 five nations at the heart of the region—Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, and Uzbekistan— suddenly became independent. Today they sit strategically between Russia, China, and Iran and hold some of the world's largest deposits of oil and natural gas. Long-suppressed ethnic identities are finding new expression in language, religion, and occasional civil conflicts. Civil Society in Central Asia is a pathbreaking collection of essays by scholars and activists that illuminates the social and institutional forces shaping this important region's future. An appendix provides a guide to projects being carried out by local and international groups.

**Weaving the Dark Web** Robert W. Gehl, 2018-08-14 An exploration of the Dark Web—websites accessible only with special routing software—that examines the history of three anonymizing networks, Freenet, Tor, and I2P. The term “Dark Web” conjures up drug markets, unregulated gun sales, stolen credit cards. But, as Robert Gehl points out in Weaving the Dark Web, for each of these illegitimate uses, there are other, legitimate ones: the New York Times's anonymous whistleblowing system, for example, and the use of encryption by political dissidents. Defining the Dark Web straightforwardly as websites that can be accessed only with special routing software, and noting the frequent use of “legitimate” and its variations by users, journalists, and law enforcement to describe Dark Web practices (judging them “legit” or “sh!t”), Gehl uses the concept of legitimacy as a window into the Dark Web. He does so by examining the history of three Dark Web systems: Freenet, Tor, and I2P. Gehl presents three distinct meanings of legitimate: legitimate force, or the state's claim to a monopoly on violence; organizational propriety; and authenticity. He explores how Freenet, Tor, and I2P grappled with these different meanings, and then discusses each form of legitimacy in detail by examining Dark Web markets, search engines, and social networking sites. Finally, taking a broader view of the Dark Web, Gehl argues for the value of anonymous political speech in a time of ubiquitous surveillance. If we shut down the Dark Web, he argues, we lose a valuable channel for dissent.

**Contaminated Forests** Igor Linkov, William R. Schell, 2012-12-06 Concentrations of pollutants in the atmosphere have increased dramatically over the last century and many of these changes are attributable to anthropogenic activities. The influence of acid rain has been well studied, but there has been no extensive exploration of other pollutants, such as toxic chemicals, heavy metals and radionuclides. Natural ecosystems, especially forests, tend to accumulate many of these pollutants which subsequently can affect ecosystem health. These contaminants may be very damaging to the environment in Eastern Europe, where the rapid disappearance of forest is the result not only of contamination but also of poor forest management practices. The current book is designed to reduce the uncertainty in our current knowledge of forest radioecology. The three topics it embraces are (a) Modelling, (b) Measurements and Data, and (c) Countermeasures and Risk Assessment.
