Dynamic Fuel Price Pass-Through Mr.Kangni R Kpodar,Mr.Chadi Abdallah,2017-01-18 This paper assesses the dynamic pass-through of crude oil price shocks to retail fuel prices using a novel database on monthly retail fuel prices for 162 countries. The impulse response functions suggest that on average, a one cent increase in crude oil prices per liter translates into a 1.2 cent increase in the retail gasoline price at peak level six months after the shock. However, the estimates vary significantly across country groups, ranging from about 0.5 cent in MENA countries to two cents in advanced economies. The results also show that positive oil price shocks have a larger impact than negative price shocks on the retail gasoline price. Finally, the paper underscores the importance of the new dataset in refining estimates of the fiscal cost of incomplete pass-through.

*Fuel Prices* Great Britain: Parliament: House of Commons: Trade and Industry Committee,2005-06 The Committee's report examines the recent price increases in gas supply and the resulting rises in electricity prices (as about 40 per cent of electricity generation in England and Wales is gas-fired), focusing on the effects of the price increases on all types of energy customers. The report seeks to assess whether the rises are a temporary response to short-term supply problems or the start of a long-term increase in UK energy prices, and to consider possible responses by Ofgem, the regulator of the gas and electricity

markets, and the DTI to the problem. Topics discussed include: Ofgem's report into wholesale gas prices and reactions to it; the decline in production from the UK Continental Shelf (UKCS); gas storage and supply issues; the behaviour and transparency of the gas market and regulation issues; oil indexation in gas contracts; competition within European markets; vertical integration; the electricity market; new infrastructure projects; and the future of gas prices.

**The Tumultuous Politics of Scale** Donald M. Nonini,Ida Susser,2020-01-23 Contemporary politics, this book contends, depend upon the turbulent struggles and strategies around scale. Conflicts over scale can be seen as opaque class struggles. Political projects, whether from the ground up or representing corporate or state interests, continually contest the scale at which authority is vested. This volume looks at the way global corporations redefine the scale of power and how working- class and other movements build alliances and cross scales to develop political blocs. What injustices are perpetrated or, more hopefully, redressed in this process? The book, consisting of contributions from anthropologists,

geographers, and cultural studies scholars, explores theoretical issues around contested temporal and spatial scales, and around variations in scale from the body to the global. Part I focuses on bodies in motion, entangled in battles over new boundaries and political coalitions, and the ways in which migrants and refugees are disrupted by intersecting time scales. Part II on the nation- state addresses the shifting responsibilities assigned by law at different historical moments and the impact of global energy trade on national austerity policies. Part III, on rescaling sovereignty, discusses the misleading media discourse on “Brexit” and reconstructs the class bases of the move to the Right in Eastern Europe that threaten the EU. Part IV on the histories of changing scales of movements revisits historical debates on uneven and combined development, and sets out the transnational labor movements of the eighteenth and nineteenth- century Atlantic, which prefigure contemporary struggles of labor in a world which is still one of uneven and combined capitalist development. Finally, Part V considers ways in which some social movements are constrained by scale while others reshape parties and traverse nations in their efforts to build class alliances and political blocs.

**Energy, Transport, & the Environment** Oliver Inderwildi, David Anthony King, Sir David King, 2012-03-04 Sustainable mobility is a highly complex problem as it is affected by the interactions between socio-economic, environmental, technological and political issues. **Energy, Transport, & the Environment: Addressing the Sustainable Mobility Paradigm** brings together leading figures from business, academia and governments to address the challenges and opportunities involved in working towards sustainable mobility. Key thinkers and decision makers approach topics and debates including: · energy security and resource scarcity · greenhouse gas and pollutant emissions · urban planning, transport systems and their management · governance and finance of transformation · the threats of terrorism and climate change to our transport systems. Introduced by a preface from U.S. Secretary Steven Chu and an outline by the editors, Dr Oliver Inderwildi and Sir David King, **Energy, Transport, & the Environment** is divided into six sections. These sections address and explore the challenges and opportunities for energy supply, road transport, urban mobility, aviation, sea and rail, as well as finance and economics in transport. Possible solutions, ranging from alternative fuels to advanced urban planning and policy levers, will be examined in order to deepen the understanding of currently proposed solutions within the political realities of the dominating economic areas. The result of this detailed investigation is an integrated view of sustainable transport for both people and

freight, making Energy, Transport, & the Environment key reading for researchers, decision makers and policy experts across the public and private sectors.

It is one interesting energy efficient use behaviors, due to Greece

householders are influenced by energy conservation or environmental protection message. In fact, scientists agree overconsumption of natural resources is a major threat to our lives in earth. Environmental problems like greenhouse effect, ozone layer depletion, and acid rain effect are not any more problems of a specific region or environmental problem. Also, economic theory is indicated that in order to gain comfort and time households are becoming excessive energy users, neglecting the environmental impact of their choices. Environment scientists bring these environment pollution message to influence Greeks (Greece householders) to change their energy consumption behaviors at homes. The environment scientists' message indicate that we are facing global warmth and natural resource and energy shortage challenges. Due to our Earth have limited natural resource numbers to supply to us to manufacture energy, but global population has been increasing every year. Thus, it is possible that we have energy shortage crisis. Also, manufactures are spending too much energy to waste to manufacture any products, the energy will cause air or water pollution in manufacturing process or drivers are driving their vehicles to pollute air on the roads. Hence, environment scientists' message influence Greece householders began to consider these questions concern to reduce fossil fuel energy. Why do we need to Safety in using fuel and handle gas leaks? Why do we feel town gas smell? How is electricity located at electric station far away from town area? How to solve problems caused by the use of fossil fuels? How to

reduce the use of fossil fuels?Greece householders consider to solve the problems, the best way is to reduce their used of fossil fuel. This helps prevent fossil fuels form being used up too quickly. Also, it helps them to reduce environmental problems because fewer pollutants are given out when less fossil fuels are used. Can human help to reduce the use of fossil fuels?
