**Understanding Gaia** Gabriella Bernardi,Alberto Vecchiato,2019-03-16 This book is the first to provide a comprehensive, readily understandable report on the European Space Agency's Gaia mission that will meet the needs of a general audience. It takes the reader on an exciting journey of discovery, explaining how such a scientific satellite is made, presenting the scientific results available from Gaia to date, and examining how the collected data will be used and their likely scientific consequences. The Gaia mission will provide a complete and high-precision map of the positions, distances, and motions of the stars in our galaxy. It will revolutionize our knowledge on the origin and evolution of the Milky Way, on the effects of mysterious dark matter, and on the birth and evolution of stars and extrasolar planets. The Gaia satellite was launched in December 2013 and has a foreseen operational lifetime of five to six years, culminating in a final stellar catalogue in the early 2020s. This book will appeal to all who have an interest in the mission and the profound impact that it will have on astronomy.

**The Messengers** Mike Clelland,2020-08-19 Without question, this is a classic by one of the most exciting new authors in the UFO field today. After reading it, your view of reality will never be the same. The owl has held a place of reverence and mystique throughout history. And as strange as this might seem, owls are also showing up in conjunction with the UFO experience. Mike Clelland has collected a wealth of first-hand accounts in which owls manifest in the highly charged moments that surround alien contact. There is a strangeness to these accounts that defy simple explanations. This book explores implications that go far beyond what more conservative researchers would dare consider. But the owl connection encompasses more than the UFO experience. It also includes profound synchronicities, ancient archetypes, dreams, shamanistic experiences, personal transformation, and death. From the mythic legends of our ancient past to the first-hand accounts of the UFO abductee, owls are playing some vital role. This is also a deeply personal story. It is an odyssey of self-discovery as the author grapples with his own owl and UFO encounters. What plays out is a story of transformation with the owl at the heart of this journey.

**Terra Forma** Frederique Ait-Touati,Alexandra Arenes,Axelle Gregoire,2022-02-01 Charting the exploration of an unknown world—our own—with a new cartography of living things rather than space available for conquest or colonization. This book charts the exploration of an unknown world: our own. Just as Renaissance travelers set out to map the terra incognita of the New World, the mapmakers of Terra Forma have set out to rediscover the world that we think we know. They do this with a new kind of cartography that maps living things rather than space emptied of life and available to be conquered or colonized. The maps in Terra Forma lead us inward, not off into the distance, moving from the horizon line of conventional cartography to the thickness of the ground, from the global to the local. Each map in Terra Forma is based on a specific territory or territories, and each tool, or model, creates a new focal point through which the territory is redrawn. The maps are “living maps,” always under construction, spaces where stories and situations unfold. They may

map the Earth's underside rather than its surface, suggest turning the layers of the Earth inside out, link the biological physiology of living inhabitants and the physiology of the land, or trace a journey oriented not by the Euclidean space of GPS but by points of life. These speculative visualizations can constitute the foundation for a new kind of atlas.

**Gaia, Queen of Ants** Hamid Ismailov, 2020-02-11 From Uzbek author-in-exile Hamid Ismailov comes a dark new parable of power, corruption, fraud, and deception. Ismailov narrates an intimate clash of civilizations as he follows the lives of three expatriates living in England. Domrul is a young Turk with vague and painful memories of ethnic strife in the Uzbekistan of his childhood. His Irish girlfriend Emer struggles with her own adolescent trauma from growing up in war-torn Bosnia. Domrul is the caretaker for Gaia, the eighty-year-old, powerful wife of a Soviet party boss with a mysterious past. One of Ismailov's few novels written in Uzbek, *Gaia, Queen of Ants* offers a rare portrait of a complex and little-known part of the world. A plot centered on political corruption and ethnic conflict is punctuated with Sufi philosophy and religious gullibility. As Ismailov's characters grapple with questions of faith, power, sex, and family, *Gaia, Queen of Ants* presents a moving tale of universal themes set against a Central Asian backdrop in the twenty-first century.

**Grace, Gaia, and The End of Days** Stuart Wilde, 2009-03-01 In this book, Stuart Wilde gives you the keys to levels of metaphysical comprehension and sophistication not normally understood. Stuart says that we are in the Kali Yuga, the Age of Destruction, when the self-correcting intelligence of the planet (Gaia) will take back Earth on behalf of the animals, nature, and the little children. He says there are battles currently raging in the spiritual worlds between the forces of light and the ghouls (dark entities) in order to free us all. He describes a power he calls the Solar Logos, which he says

comes to Earth to deliver a rebirth he calls the Renewal. As such, he calls this time the End of Days—not because the world will end, but because it is the end of the world as we know it.

**Facing Gaia** Bruno Latour, 2017-09-05 The emergence of modern sciences in the seventeenth century profoundly renewed our understanding of nature. For the last three centuries new ideas of nature have been continually developed by theology, politics, economics, and science, especially the sciences of the material world. The situation is even more unstable today, now that we have entered an ecological mutation of unprecedented scale. Some call it the Anthropocene, but it is best described as a new climatic regime. And a new regime it certainly is, since the many unexpected connections between human activity and the natural world oblige every one of us to reopen the earlier notions of nature and redistribute what had been packed inside. So the question now arises: what will replace the old ways of looking at nature? This book explores a potential candidate proposed by James Lovelock when he chose the name 'Gaia' for the fragile, complex system through which living phenomena modify the Earth. The fact that he was immediately misunderstood proves simply that his readers have tried to fit this new notion into an older frame, transforming Gaia into a single organism, a kind of giant thermostat, some sort of New Age goddess, or even divine Providence. In this series of lectures on 'natural religion,' Bruno Latour argues that the complex and ambiguous figure of Gaia offers, on the contrary, an ideal way to disentangle the ethical, political, theological, and scientific aspects of the now obsolete notion of nature. He lays the groundwork for a future collaboration among scientists, theologians, activists, and artists as they, and we, begin to adjust to the new climatic regime.

**Models of Time and Space from Astrophysics and World Cultures** Bryan E. Penprase, 2023-07-24 Models of Time and Space from Astrophysics and World Cultures explores how our conceptions of time, space, and the physical universe have evolved across cultures throughout the centuries. Developed with a humanistic approach, this book blends historical sources, biographical profiles of exceptional scientists, and the latest discoveries in both astrophysics and particle physics. This rich read describes the incredible insights and ultimate limits of our knowledge, the physical universe, and how ideas old and new have converged, across the world, to build our current understanding of reality. From the Large Hadron Collider to the James Webb Space Telescope, we have mapped the universe from the smallest to largest scales; allowing us to gain fundamental knowledge that has transformed our understanding of the universe. The chapters herein will teach you about dark matter and dark energy, gravitational waves and other complex parts of the cosmos. Along the way, you will learn a thing or two about quantum mechanics, parallel universes, and the ultimate boundaries of the observable universe. This book cultivates insight from a variety of cultural traditions, including perspectives from both modern and ancient cultures, in order to show how our modern conceptions of space and time have arisen from the ongoing explorations within ancient world civilizations. It is a valuable, intriguing and insightful volume for those interested in the fields of historical astronomy and cultural astronomy, as well as for anyone interested in learning about the latest finds from the field of physics and astrophysics.

**Earth Grids** Hugh Newman, 2018-04-01 Do ancient maps prove that the planet was surveyed 12,000 years ago? Were the poles once in a different position to where they are today? Is there a secret pattern joining the great sites of antiquity? **Sacred Gaia** Anne Primavesi, 2002-09-11 Gaia, the scientific theory founded by James Lovelock in 1979, embraces the earth as a whole, dynamic entity whose sum is always larger than its parts. While science and theology are often seen as contraries, which negate or dilute one another, Gaia theory harmonizes both systems of thought. Sacred Gaia cogently describes Gaia theory's analysis of human and earthly evolution. Anne Primavesi's remarkable, effortlessly coherent book helps us to recognize the sacredness of our origins and our responsibility for the future.

*Global Forest Visualization* Lynda Olman, Birgit Schneider, 2024-02-20 This book project examines global forest monitoring as a means to understand the promises and problems of global visualization for climate management. Specifically, the book focuses on Global Forest Watch, the most developed and widely available forest-monitoring platform, created in 1997 by the World Resource Institute. Forest maps are always political as they visualize power relations and form the grid within which forests become commodities. This dislocation of the idea of the forest from its literal roots in the ground has generated problems for forest visualization efforts designed to empower local communities. This book takes a critical humanistic approach to this problem, combining methods from the fields of rhetoric and media studies to suggest solutions to these problems for designers and users of platforms like the Global Forest Watch. To explain why global views of forests can be disempowering, the book relies on biopolitical and rhetorical theories of panopticism and how these views unfold a different violence on different regions of the Earth in

relation to colonial history. Using this theoretical framework, the book explains the historical process by which forests came to be classified, quantified, and mapped on a global scale. Interviews with end-users of global forest visualization platforms reveal if and how these platforms support local action. Lastly, the book provides rhetorical solutions to articulate global and local views of forests without reducing one view to the other. These solutions involve looking to forests themselves for clues about how to generate more broadly effective and resilient visualizations. This book will be of great interest to students and scholars of forest studies, climate change, science communication, visualization studies, environmental communication, and environmental conservation.
