Building Windows 8 Apps with C# and XAML Jeremy Likness, 2012-10-25 “Jeremy builds real apps for real customers. That’s why I can heartily recommend this book. Go out and write some great apps...and keep this book handy.” —From the Foreword by Jeff Prosise

Build Exceptionally Immersive and Responsive Touch-Based Windows Store Apps for Windows 8 with C# and XAML This is the first practical guide to building breakthrough applications for Windows 8 from project templates through publication to the new Windows Store. Microsoft “MVP of the Year” Jeremy Likness helps you combine your existing developer skills with new Visual Studio 2012 tools and best practices to create apps that are intuitive and innovative. His guidance and insight will help you dive into Windows 8 development—and gain a powerful competitive advantage for years to come. Likness illuminates the entire apps lifecycle, from planning and Model-View-View Model (MVVM) based design through coding, testing, packaging, and deployment. He covers both business and consumer apps, showing how Windows 8/WinRT development builds upon and contrasts with older WPF and Silverlight approaches. Using carefully crafted downloadable code examples and sample projects, Likness shows how to make the most of new platform features, including integrated social networking, search, contracts, charms, and tiles. Throughout, he addresses crucial development challenges that have only been discussed on MSDN, blog posts, and Twitter feeds—and never with this depth and clarity before. Coverage includes

- Mastering real-world Windows 8 development for all devices and form factors
- Understanding the new WinRT framework and the unique characteristics of Windows 8 apps
- Designing apps that are faster, more responsive, do more with less, and maximize battery life
- Creating exceptionally fluid interfaces with VS 2012 templates, built-in animations, and XAML
- Building apps that respond consistently to multiple forms of input, including complex touch manipulations
- Using contracts and charms to expose services or enable users to do so
- Providing information to users through Live Tiles even when your app isn’t running
- Connecting your app seamlessly to multiple data sources, including social networks and cloud storage
- Syndicating rich, network-based content
- Using Model-View-ViewModel (MVVM)
- Securing Windows 8 apps through authentication and authorization
- Efficiently testing, debugging, packaging, and deploying apps

Prepared Diane Tavenner, 2021-09-14 A blueprint for how parents can stop worrying about their children’s future and start helping them prepare for it, from the cofounder and CEO of one of America’s most innovative public-school networks “A treasure trove of deeply practical wisdom that accords with everything I know about how children thrive.”—Angela Duckworth, New York Times bestselling author of *Grit* In 2003, Diane Tavenner cofounded the first school in what would soon become one of America’s most innovative public-school networks. Summit Public Schools has since won national recognition for its exceptional outcomes: Ninety-nine percent of students are accepted to a four-year college, and they graduate from college at twice the

national average. But in a radical departure from the environments created by the college admissions arms race, Summit students aren't focused on competing with their classmates for rankings or test scores. Instead, students spend their days solving real-world problems and developing the skills of self-direction, collaboration, and reflection, all of which prepare them to succeed in college, thrive in today's workplace, and lead a secure and fulfilled life. Through personal stories and hard-earned lessons from Summit's exceptional team of educators and diverse students, Tavenner shares the learning philosophies underlying the Summit model and offers a blueprint for any parent who wants to stop worrying about their children's future—and start helping them prepare for it. At a time when many students are struggling to regain educational and developmental ground lost to the disruptions of the pandemic, Prepared is more urgent and necessary than ever.

On Shell Structure Richard K. Larson, 2014-02-03 This volume collects together core papers by Richard K. Larson developing what has since come to be known as the VP Shell or Split VP analysis of sentential structure. The volume includes five previously published papers together with two major unpublished works from the same period: *Light Predicate Raising* (1989), which explores the interesting consequences of a leftward raising analysis of NP Shift phenomena, and *The Projection of DP (and DegP)* (1991), which extends the shell approach to the projection of nominal and adjectival structure, showing how projection can be handled in a uniform way. In addition to published, unpublished and limited distribution work, the volume includes extensive new introductory material. The general introduction traces the conceptual roots of VP Shells and its problems in the face of subsequent developments in theory, and offers an updated form compatible with modern Minimalist syntactic analysis. The section introductions to the material on datives, complex predicates and nominals show how the updated form of shell theory applies in the empirical domains where it was originally developed.
