Technology and Aging A. Mihailidis, J. Boger, H. Kautz, 2008-01-17 This publication presents articles on Aging-in-Place, Assistive Technology, Monitoring and Telehealth, Transportation and Mobility, and Design. The section on assistive technology (AT) represents arguably the most mature and generic aspect of technology and aging; except that AT can hardly be regarded really as a specific discipline any longer. Assistive devices and systems command an expansive gamut of technological and engineering specialties, drawing upon mechanical engineering and industrial design at one end of the field and cybernetic systems engineering and brain-computer user interfaces at the other. The largest section in the book, on monitoring and telehealth, reveals novel applications of advanced pattern recognition techniques, some of which have, up to now, found roles primarily in the military, process engineering, and financial sectors. Transportation and mobility still represents by far the largest and most commercially lucrative market segment of technology for seniors. There is however a clear trend towards synthesis of information and communication technologies (ICT) and mobility technologies, which is embodied in the latest developments of automatic collision avoidance and full or semi-autonomous navigation functions in powered mobility devices. The last section is dedicated to design issues. It is proposed that designing for the special needs market before making a design as inclusive as possible to the mainstream market is a viable alternative to the currently accepted notion of inclusive design, provided that aesthetics are appropriately addressed. To conclude, we see a social shift from institutional to home-based care, in which information communication technology based solutions now afford the possibility of aging-in-place for the many thousands of people having mild to moderate cognitive impairment.

Intelligent Interactive Assistance and Mobile Multimedia Computing Djamshid Tavangarian, Thomas Kirste, Dirk Timmermann, Ulrike Lucke, Daniel Versick, 2009-11-06
The IMC 2009 program consisted of three invited talks from international experts, four tutorials on fundamental techniques related to the conference topics, nine regular paper sessions, and a short paper / poster session. We received close to 50 submissions from 15 countries world-wide. Based on the anonymous reviews provided by members of the international Program Committee, the Steering Committee recommended accepting 50% of the contributions as regular papers and another 15% as short papers with poster presentation. To our regret there were a few interesting papers that we had to reject. However, the reviewing results showed a high quality as well as an interesting variety of submissions. We would like to thank all authors for carefully preparing the results of their work submitted to IMC 2009, thus enabling an interesting and high-quality conference program. Moreover, we are deeply grateful to all members of the Program and Steering Committees for their efforts in quickly and thoroughly evaluating the papers. Finally, our special thanks go to the organizers Ulrike Lucke and Daniel Versick for their great work. They handled all the organizational tasks as well as the communications, the electronic submission, reviewing, and publication procedure in an efficient and timely manner.

Modular System Design and Evaluation Mark Sh. Levin, 2014-09-06 This book examines seven key combinatorial engineering frameworks (composite schemes consisting of algorithms and/or interactive procedures) for hierarchical modular (composite) systems. These frameworks are based on combinatorial optimization problems (e.g., knapsack problem, multiple choice problem, assignment problem, morphological clique problem), with the author's version of morphological design approach – Hierarchical Morphological Multicriteria Design (HMMD) – providing a conceptual lens with which to elucidate the examples discussed. This approach is based on ordinal estimates of design alternatives for systems parts/components, however, the book also puts forward an original version of HMMD that is based on new interval multiset estimates for the design alternatives with special attention paid to the aggregation of modular solutions (system versions). The second part of 'Modular System Design and Evaluation' provides ten information technology case studies that enriches understanding of the design of system design, detection of system bottlenecks and system improvement, amongst others. The book is intended for researchers and scientists, students, and practitioners in many domains of information technology and engineering. The book is also designed to be used as a text for courses in system design, systems engineering and life cycle engineering at the level of undergraduate level, graduate/PhD levels, and for continuing education. The material and methods contained in this book were used over four years in Moscow Institute of Physics and Technology (State University) in the author's faculty course "System Design".

Interactive Architecture Michael Fox, 2016-06-07 Recent technological developments in biology, computation, cybernetics, engineering, industrial design, materials, and robotics allow architecture to evolve beyond static functionality and become an active participant—with the capacity to perceive, react to, and connect—with humans and the natural world. The first process-based guide by Michael Fox and Miles Kemp introduced interactive architecture in 2009, and the past few years have seen its prototypical potential unleashed, manifest in the eighteen inventive projects featured in this follow-up, the latest in our Architecture Briefs series. Interactive Architecture: Adaptive World illustrates how structures can process information, make observations, and utilize tools to translate natural systems and create seamlessly integrated environments, from data-driven light installations, responsive sculptures, and performative materials, to smart highways, dynamic spaces, kinetic facades, and adaptive buildings. Ambitious projects from around the world, including Abu Dhabi, Indianapolis, Los Angeles, New York City, San Francisco, Frankfurt, London, Paris, Sochi, and Zurich, are illuminated by photographs, diagrams, and renderings.

Palladio Virtuel Peter Eisenman, Matt Roman, 2015 Featuring more than 300 new analytic drawings and models, this study explores the evolution of Palladio's villas from those that exhibit classical symmetrical volumetric bodies to others that exhibit no bodies at all, just fragments in a landscape.

Barrierefreies Bauen Band 1 Gerhard Loeschcke, Lothar Marx, Daniela Pourat, 2011-10-13 Teil 1 der DIN 18040 stellt die Grundlagen für die Planung von barrierefreien öffentlichen Gebäuden bereit. Im Mittelpunkt des Kommentars stehen u. a. Besonderheiten bei der Erschließung, die Raumgeometrie und die Infrastruktur. Besondere Aufmerksamkeit wird der barrierefreien Ausstattung und Einrichtung gewidmet, um allen Personen eine selbstbestimmbare, unabhängige und selbstständige Nutzung öffentlicher Gebäude zu ermöglichen.
