Online Maps with APIs and WebServices Michael P. Peterson,2012-03-30 The
Internet has become the major form of map delivery. The current presentation
of maps is based on the use of online services. This session examines
developments related to online methods of map delivery, particularly
Application Programmer Interfaces (APIs) and MapServices in general,
including Google Maps API and similar services. Map mashups have had a major
impact on how spatial information is presented. The advantage of using a
major online mapping site is that the maps represent a common and
recognizable representation of the world. Overlaying features on top of these
maps provides a frame of reference for the map user. A particular advantage
for thematic mapping is the ability to spatially reference thematic data.
