Virtual Reality and the Built Environment Jennifer Whyte, Dragana Nikolić, 2018-02-21 Like the first edition, the central question this book addresses is how virtual reality can be used in the design, production and management of the built environment. The book aims to consider three key questions. What are the business drivers for the use of virtual reality? What are its limitations? How can virtual reality be implemented within organizations? Using international case studies it answers these questions whilst addressing the growth in the recent use of building information modelling (BIM) and the renewed interest in virtual reality to visualize and understand data to make decisions. With the aim of inspiring and informing future use, the authors take a fresh look at current applications in the construction sector, situating them within a broader trajectory of innovation. The new edition expands the scope to consider both immersive virtual reality as a way of bringing professionals inside a building information model, and augmented reality as a way of taking this model and related asset information out to the job-site. The updated edition also considers these technologies in the context of other developments that were in their infancy when the first edition was written – such as laser scanning, mobile technologies and big data. Virtual Reality in the Built Environment is essential reading for professionals in architecture, construction, design, surveying and engineering and students on related courses who need an understanding of BIM, CAD and virtual reality in the sector. Google Earth Engine Applications Lalit Kumar, Onesimo Mutanga, 2019-04-23 In a rapidly changing world, there is an ever-increasing need to monitor the Earth's resources and manage it sustainably for future generations. Earth observation from satellites is critical to provide information required for informed and timely decision making in this regard. Satellite-based earth observation has advanced rapidly over the last 50 years, and there is a plethora of satellite sensors imaging the Earth at finer spatial and spectral resolutions as well as high temporal resolutions. The amount of data available for any single location on the Earth is now at the petabyte-scale. An ever-increasing capacity and computing power is needed to handle such large datasets. The Google Earth Engine (GEE) is a cloud-based computing platform that was established by Google to support such data processing. This facility allows for the storage, processing and analysis of spatial data using centralized high-power computing resources, allowing scientists, researchers, hobbyists and anyone else interested in such fields to mine this data and understand the changes occurring on the Earth's surface. This book presents research that applies the Google Earth Engine in mining, storing, retrieving and processing spatial data for a variety of applications that include vegetation monitoring, cropland mapping, ecosystem assessment, and gross primary productivity, among others. Datasets used range from coarse spatial resolution data, such as MODIS, to medium resolution datasets (Worldview -2), and the studies cover the entire globe at varying spatial and temporal scales.

In less than a decade, Steve accomplished the impossible - Apple was now a trillion dollar juggernaut. Their domain included Music, Books, Smartphones, Tablets, Laptops and more. Within these pages are the often overlooked, misunderstood or misrepresented lessons that made it all possible and you won't find them anywhere else.
