Google Earth Engine Applications Lalit Kumar, Onesimo Mutanga, 2019-04-23 In a rapidly changing world, there is an ever-increasing need to monitor the Earth's resources and manage it sustainably for future generations. Earth observation from satellites is critical to provide information required for informed and timely decision making in this regard. Satellite-based earth observation has advanced rapidly over the last 50 years, and there is a plethora of satellite sensors imaging the Earth at finer spatial and spectral resolutions as well as high temporal resolutions. The amount of data available for any single location on the Earth is now at the petabyte-scale. An ever-increasing capacity and computing power is needed to handle such large datasets. The Google Earth Engine (GEE) is a cloud-based computing platform that was established by Google to support such data processing. This facility allows for the storage, processing and analysis of spatial data using centralized high-power computing resources, allowing scientists, researchers, hobbyists and anyone else interested in such fields to mine this data and understand the changes occurring on the Earth's surface. This book presents research that applies the Google Earth Engine in mining, storing, retrieving and processing spatial data for a variety of applications that include vegetation monitoring, cropland mapping, ecosystem assessment, and gross primary productivity, among others. Datasets used range from coarse spatial resolution data, such as MODIS, to medium resolution datasets (Worldview -2), and the studies cover the entire globe at varying spatial and temporal scales.

Google Earth 2017: Learning the Essentials Dale Michelson, 2017-08-03 Google Earth is a geographic browser or geobrowser which means that it can access images from satellites, the air, ocean, and other geographical data by using the internet. It represents the Earth as a three-dimensional globe. In simpler terms, it is a computer program that uses satellite imagery to provide a representation of the earth. It was first released on June 11, 2001. Subsequent versions were released thereafter, including the most recent version called Google Earth Update. Google Earth displays satellite imagery of the Earth's surface so that users can view cities, oceans, and pretty much almost all of the earth in 3D, or three dimensions. Users can also add their own data and make them available. There are many other things that users can do with Google Earth, and they will be mentioned further on in the book.

GPS and Google Earth for Development: How to Create, Share and Collaborate with Maps on the Net Santiago Arnalich, Julio Urruela, 2012-09 This book shows you how to use a GPS and Google Earth to create simple and expressive maps to share on the web like the one shown on the cover. With a reading time of a mere 10 hours you will learn to work with a GPS without making mistakes, to use it with Google Earth including in areas without internet access and to quickly create diverse interactive maps that other people can see and modify over the internet without the need for experts or unnecessary complications. Even though it has been written in the context of Relief and

Development work, the same process is valid for whatever other application.

Desert Landscapes of the World with Google Earth Andrew Goudie, 2023-01-01 This book presents an introduction to desert landscapes—primarily landforms that are natural and man-made. It is based around the presentation of a series of beautiful and informative annotated Google Earth images. These are accompanied by text that describes the feature(s) concerned, their location, and their origin. There are also, in some cases, ground images taken by the author.

Landforms of the World with Google Earth Anja M. Scheffers, Simon M. May, Dieter H. Kelletat, 2015-03-11 This book of phenomenal illustrations provides a wealth of visual information on

the wide variety of landform processes over all latitudes, climates and geological time-scales. It invites you to observe the surface of planet Earth, to appreciate its astonishing beauty and to explore scientific explanations for the form of our landscapes. 250 full-colour images from Google Earth enable all types of terrestrial environments and landforms to be appreciated at a glance. Images are explained with scales, coordinates, explanatory text and references, making the landform processes active on our globe easy for the reader to comprehend. See the effects of both sudden and slow forming agents such as the impact of a comet or meteorite, and erosion and deposition processes through wind, flowing water, creeping glacier ice, or frost in the ground. Appreciate how landscapes are shaped by processes such as weathering, transport and erosion and how that erosion enables us to look into endogenic processes (those within the Earth's crust), called tectonics. These images and the processes that they document show that continents are shifting, mountains are uplifting, and ocean bottoms may sink deeper. This collection will appeal to everyone: researchers, students and non-experts alike can take inspiration from these images, which bring the landforms of the world to life. The scientific discipline of geomorphology becomes accessible through the fascinating insights that these clear, well explained images allow.
